DECLARATION OF PERFORMANCE

DoP 0372

for Upat frame fixing URD (Plastic anchor for use in concrete and masonry)

1. <u>Unique identification code of the product-type:</u> **DoP 0372**

2. Intended use/es: Plastic anchor for multiple use in concrete and masonry for non-structural applications (base

material group a b, c, d), see appendix, especially annexes B1 - B6.

3. Manufacturer: Upat Vertriebs GmbH, Bebelstraße 11, 79108 Freiburg im Breisgau, Germany

4. <u>Authorised representative:</u> –

5. System/s of AVCP: 2-

6. European Assessment Document: EAD 330284-00-0604, Edition 12/2020

European Technical Assessment: ETA-17/0811; 2025-01-16

Technical Assessment Body: DIBt- Deutsches Institut für Bautechnik

Notified body/ies: 2873 TU Darmstadt

7. Declared performance/s:

Mechanical resistance and stability (BWR 4)

Resistance to steel failure under tension loading: Annex C1

Resistance to steel or polymer failure under shear loading: Annex C1

Resistance to pull-out or concrete failure or polymer failure under tension loading (base material group a): Annex C1

Resistance in any load direction without lever arm (base material group b, c, d): see appendix, especially annexes C3 - C26

Edge distance and spacing (base material group a): Annex B4

Edge distance and spacing (base material group b, c, d): Annex B5

Displacements under short-term and long-term loading: Annex C2

Durability: Annexes A3, B1, B2

Safety in case of fire (BWR 2)

Reaction to fire: Class A1
Resistance to fire: Annex C2

8. Appropriate Technical Documentation and/or Specific -

Technical Documentation:

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Dr. Ronald Mihala, Head of Development and Production Management

Tumlingen, 2025-03-05

Dieter Pfaff, Head of International Production Federation and Quality Management

This DoP has been prepared in different languages. In case there is a dispute on the interpretation the English version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

Einfach. Sicher. Upai.

Specific Part

1 Technical description of the product

The frame fixing in the range URD 8 and URD 10 is a plastic anchor consisting of a plastic sleeve made of polyamide and an accompanying specific screw of galvanised steel, of galvanised steel with an additional organic layer or of stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance	
Reaction to fire	Class A1	
Resistance to fire	see Annex C 2	

3.2 Mechanical resistance and stability (BWR 4)

Essential characteristic	Performance
Resistance to steel failure under tension loading	see Annex C 1
Resistance to steel failure under shear loading	see Annex C 1
Resistance to pull-out or concrete failure under tension loading (base material group a)	see Annex C 1
Resistance in any load direction without lever arm (base material group b, c, d)	see Annexes C 11 – C 26
Edge distance and spacing (base material group a)	see Annex B 4
Edge distance and spacing (base material group b, c, d)	see Annex B 5
Displacements under short-term and long-term loading	see Annex C 2
Durability	see Annex B 1 and B 2

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD 330284-00-0604 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

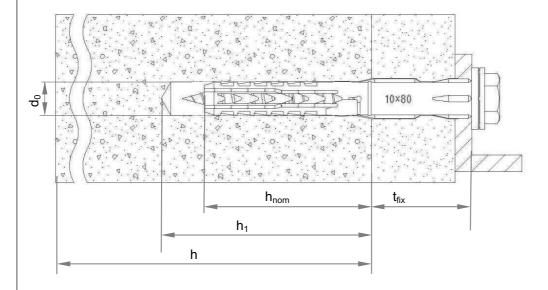

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

The following standards and documents are referred to in this European Technical Assessment:

- EOTA European Assessment Document EAD 330284-00-0604, edition December 2020:
 Plastic anchors for redundant non-structural systems in concrete and masonry
- EOTA Technical Report TR 051, Edition April 2018: Recommendations for job site tests of plastic anchors and screws
- EOTA Technical Report TR 064, Edition May 2018: Design of plastic anchors in conrete and masonry
- EN 206:2013+A1:2016: Concrete Specification, performance, production and conformity

- EN ISO 4042:2022: Fasteners Electroplated coating systems

URD

Legend

 h_{nom} = Overall plastic anchor embedment depth in the base material

 h_1 = Depth of drill hole to deepest point

d₀ = Nominal drill hole diameter

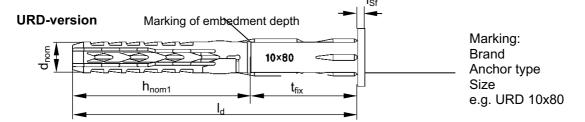

h = Thickness of member (base material)

 t_{fix} = Thickness of fixture and / or non-load-bearing layer

Product description	Annex A 3
Dimensions and materials	Appendix 5 / 37

Specifications of intended use

Anchorages subject to:

- Static and quasi-static loads.
- Redundant non-structural systems.

Base materials:

- Reinforced or unreinforced compacted normal weight concrete without fibres, strength classes ≥ C12/15 (base material group "a"), as per EN 206, see Annex C 1 and C 3.
- Thin-walled concrete components (e.g. weather shells) strength classes ≥ C12/15 (base material group "a"), as per EN 206, thickness ≥ 40 mm, see Annex C 1 and C 3.
- Solid brick masonry (base material group "b") as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 3 C 4, C 12 C 18.
 - Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow or perforated brick masonry (base material group "c"), as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 4 C 10, C 18 C 26.
- Unreinforced autoclaved aerated concrete (base material group "d") as per EN 771-4, see Annex C 10 and C 26.
- Mortar strength class of the masonry ≥ M2,5 in accordance with EN 998-2.
- For other comparable base materials of the base material group "a", "b", "c" and "d" the characteristic resistance of the anchor may be determined by job site tests in accordance with TR 051.

Temperature Range:

URD 8 and URD 10

- c: 40 °C to 50 °C (max. short term temperature + 50 °C and max long term temperature + 30 °C)
- b: 40 °C to 80 °C (max. short term temperature + 80 °C and max long term temperature + 50 °C)

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: Special screw made of zinc coated steel or stainless steel.
- The specific screw made of galvanised steel or galvanised steel with an additional organic layer may also be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e.g. undercoating or body cavity protection for cars).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist: Special screw made of stainless steel of corrosion resistance class CRC III.
 - Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Frame fixing URD	
Intended use	Annex B 1
Specifications	Appendix 6 / 37

Design:

- The anchorages are to be designed in accordance with TR 064 under the responsibility of an engineer experienced in anchorages and concrete/masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.

Installation:

- Hole drilling by the drilling method in accordance with Annex C 1 for base material group "a" and Annex C 12 C 26 for base material group "b", "c" and "d".
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature from URD 8 and URD 10: -5 °C to + 40 °C
- Exposure to UV due to solar radiation of the not protected anchor by rendering ≤ 6 weeks.
- No ingress of water in the borehole at temperatures < 0 °C.

²⁾ For some anchor sizes and bricks Footnotes ⁷⁾ and ⁸⁾ on Annex C 11 have to be considered

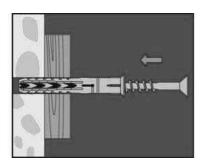

Installation instructions - pictures show e.g. use in anchorage base material group "a" concrete

 Drill the bore hole according to Table B3.1 using the drilling method described in the corresponding Annex C.

 Base material group "a", "b", "d": Remove dust from borehole.
 Base material group "b" (e.g. perforated clay brick): Dust from borehole must not be removed.

3. Insert anchor (screw and sleeve) by using a hammer until the collar of the plastic sleeve is flush with the surface of the fixture.

4. The screw is screwed-in until the head of the screw touches the sleeve. The anchor is correctly mounted, when the head of the screw fits tight on the surface and cannot be screwed-in any further.

5. Correctly installed anchor, e.g. in concrete.

Footnotes for Annex C 12 - C 26

- 1) In absence of other national regulations.
- 2) Only valid for temperature range 30/50 °C.
- ³⁾ Only valid for edge distance c ≥ 150 mm; intermediate values by linear interpolation.
- ⁴⁾ Only valid for edge distance c ≥ 200 mm; intermediate values by linear interpolation.
- ⁵⁾ Only valid for edge distance c ≥ 150 mm for temperature range 30/50 °C; intermediate values by linear interpolation.
- 6) Only valid for edge distance c ≥ 200 mm for temperature range 30/50 °C; intermediate values by linear interpolation.
- 7) Only valid for spacing $s \ge 250 \text{ mm}$
- 8) Only valid for spacing s ≥ 250 mm for temperature range 30/50 °C
- ⁹⁾ The compressive strength of the single brick must not be less than 80 % of the mean compressive strength.
- ¹⁰⁾ No performance assessed.
- ¹¹⁾ The characteristic resistance F_{Rk} is taken from the lower compressive strength of the masonry unit.
- 12) If the compressive strength of the base material according to EN 771-1, EN 771-2 or EN 771-3 on the construction side is lower than the mean compressive strength given in the tables according to Annex C 12 C 26, F_{Rk} shall be calculated as follows:

$F_{Rk, construction site} = F_{Rk} $ (Table C. "X")	Mean compressive strength (construction site)
T'Rk, construction site - T'Rk (TADIE C. A)	Mean compressive strength (Table C."X")
