Einfach. Sicher. Upat

DECLARACIÓN DE PRESTACIONES

DoP 0271

para el tornillo para hormigón UCS (anclaje mecánico para uso en hormigón) ES

1. Código de identificación única del producto tipo: **DoP 0271**

2. Usos previstos: **Fijación a posteriori en hormigón fisurado y no fisurado, véase el apéndice, especialmente los anexos B1 - B4.**

3. Fabricante: **Upat Vertriebs GmbH, Bebelstraße 11, 79108 Freiburg im Breisgau, Alemania**

4. Representante autorizado: **–**

5. Sistemas de evaluación y verificación de la constancia de las prestaciones (EVCP): **1**

6. Documento de evaluación europeo: **EAD 330232-00-0601**
   Evaluación técnica europea: **ETA-18/0762; 2018-12-12**
   Organismo de evaluación técnica: **DIBt- Deutsches Institut für Bautechnik**
   Organismos notificados: **2873 TU Darmstadt**

7. Prestaciones declaradas:

Resistencia mecánica y estabilidad (BWR 1)

Resistencia característica a tracción (carga estática y cuasi-estática):

Resistencia de rotura del acero: Anexo C1	E_S= 210 000 MPa
Résistance à la rupture par extraction glissement: Anexo C1	
Resistencia de rotura por cono de hormigón: Anexo C1	
Robustez: Anexo C1	
Distancia mínima entre el borde y el centro: Anexo B3	
Distancia al borde para evitar la rotura del acero sometido a carga: Anexo C1	$N^0_{Rk,sp}$=NPD

Resistencia característica a cortante (carga estática y cuasi-estática):

Resistencia de rotura del acero (esfuerzo cortante): Anexo C1
Resistencia falla por arrancamiento lateral: Anexo C1
Resistencia de rotura del hormigón al borde: Anexo C1
Desplazamiento por carga estática y cuasi-estática: Anexo C5
Durabilidad: Anexos A2, B1

Resistencia y desplazamientos característicos para las categorías sísmicas C1 y C2:

Resistencia de rotura del acero: Anexos C2, C3
Résistance à la rupture par extraction glissement: Anexos C2, C3
Alargamiento de rotura: Anexo A2
Factor espacio anular: Anexos C2, C3
Desplazamientos: Anexo C5

Seguridad en caso de incendio (BWR 2)

Reacción al fuego: Clase (A1)

Resistencia al fuego:

Resistencia al fuego, rotura del acero (carga de tracción): Anexo C4
Resistencia al fuego, a la extracción (carga de tracción): Anexo C4
Resistencia al fuego, rotura del acero (esfuerzo cortante): Anexo C4

8. Documentación técnica adecuada o documentación técnica específica: **–**

Las prestaciones del producto identificado anteriormente son conformes con el conjunto de prestaciones declaradas. La presente declaración de prestaciones se emite, de conformidad con el Reglamento (UE) no 305/2011, bajo la sola responsabilidad del fabricante arriba identificado.

Firmado por y en nombre del fabricante por:

Dr.-Ing. Oliver Geibig, Director General Unidades de Negocio e Ingeniería

Jürgen Grün, Director General de Química y Calidad

Tumlingen, 2021-01-19

Esta DdR se ha preparado en distintos idiomas. En caso de que haya alguna controversia sobre la interpretación prevalecerá siempre la versión inglesa.

El Apéndice incluye información voluntaria y complementaria en idioma inglés que excede los requisitos legales (de idioma neutral).

Specific Part

1 Technical description of the product

The Upat concrete screw UCS is an anchor of sizes 8, 10, 12 and 14 mm made of hardened carbon steel. The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1
Displacements (static and quasi-static loading)	See Annex C 5
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 2, C 3 and C 5

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 4

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD No. 330232-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Specifications of intended use

Table B1.1: Anchorages subject to

Size	8		10			12			14		
Nominal embedment depth [mm]	50	65	55	65	85	60	75	100	65	85	115
Static and quasi-static loads in cracked and uncracked concrete	✓										
Fire exposure	✓										
Seismic performance category C1		✓		✓			✓				✓
Seismic performance category C2		✓		✓			✓				✓

Base materials:

- Reinforced and unreinforced normal weight concrete according to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013
- Non-cracked or cracked concrete: All sizes and all embedment depths

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions.

Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the screw is indicated on the design drawings (e.g. position of the screw relative to reinforcement or to supports, etc.).
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 055

Installation:

- Hammer drilling or diamond drilling or hollow drilling according to Annex B4: All sizes and all embedment depths.
- Screw installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on site.
- In case of aborted hole: New hole must be drilled at a minimum distance of twice the depth of the aborted hole or closer, if the hole is filled with a high strength mortar and only if the hole is not in the direction of the oblique tensile or shear load.
- Adjustability according to Annex B3 for: All sizes and all embedment depths.
- Cleaning of drill hole is not necessary when using a hollow drill or:
  - If drilling vertically upwards
  - If drilling vertical downwards and the drill hole depth has been increased. It is recommended to increase the drill depth with additional 3 d_0.
- After correct installation further turning of the screw head should not be possible
- The head of the screw must be fully engaged on the fixture and show no signs of damage.
- For Seismic Performance Category C2 applications: The gap between screw shaft and fixture must be filled with mortar; compressive strength ≥ 50 N/mm² (for example UPM 44 or UPM 55).

Upat concrete screw UCS

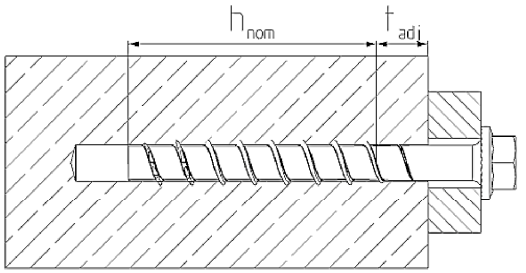
Intended Use
Installation parameters UCS 8 - 14

Annex B 2

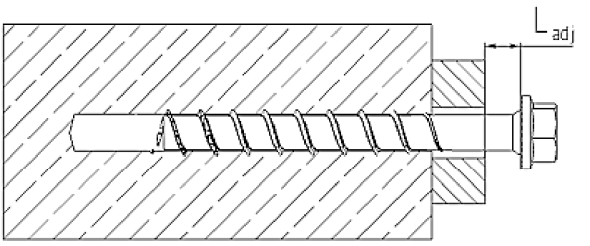
Appendix 5 / 12

Adjustment

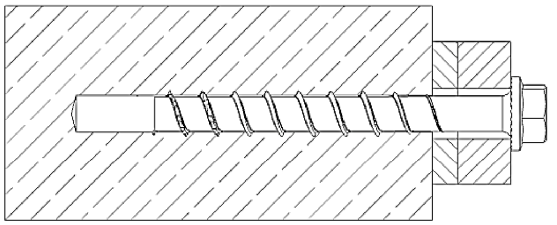
1)



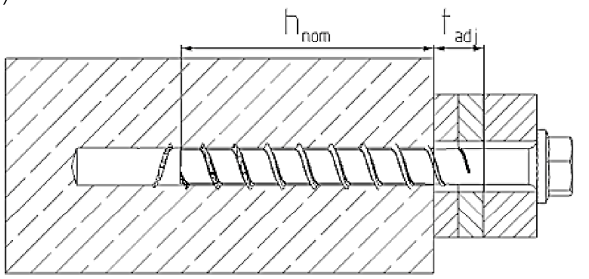
2)



3)



4)

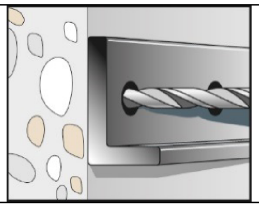


It is permissible to untighten the screw up to two times for adjustment purposes.
Therefor the screw may be untighten to a maximum
of L_{adj} = 20 mm off the surface of the initial fixture.
The total permissible thickness of shims added during the adjustment process is t_{adj} = 10 mm.

Table B3: Minimum thickness of concrete members, minimum spacing and edge distance

Screw size			UCS											
			8		10			12			14			
Nominal embedment depth	h_{nom}	[mm]	50	65	55	65	85	60	75	100	65	85	115	
Minimum thickness of concrete member	h_{min}	[mm]	100	120	100	120	140	110	130	150	120	140	180	
Minimum spacing	s_{min}	[mm]	35		40			50			60			
Minimum edge distance	c_{min}	[mm]	35		40			50			60			

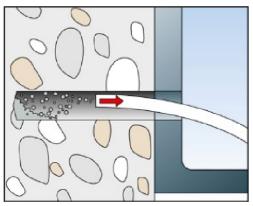
Installation instruction



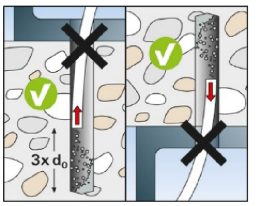
Drill the hole using hammer drill,
hollow drill or diamond core drill.

Drill hole diameter d_0 and
drill hole depth h_1 according to table B2.1

a)



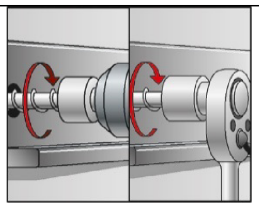
b)



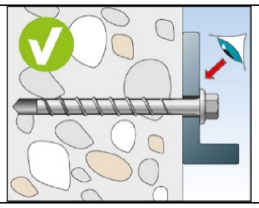
Option a): Clean the drill hole

Option b): Cleaning of drill hole is not necessary when using a hollow drill or a diamond drill or:

- If drilling vertically upwards or
- If drilling vertically downwards and the drill hole depth has been increased. It is recommended to increase the drill hole depth additional 3 times d_0.

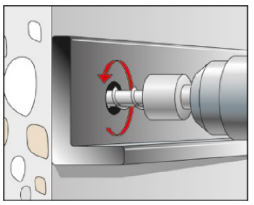


Installation with any torque impact screw driver up to the maximum mentioned torque moment ($T_{imp,max}$ according to table B2.1). Alternatively, all other tools without an indicated torque moment are allowed (e.g. ratchet spanner). The indicated torque moments for impact screw driver are therefore not decisive.

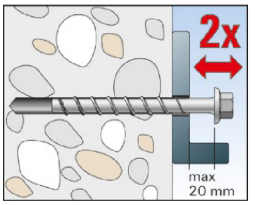


After installation a further turning of the screw must not be possible. The head of the screw must be in contact with the fixture and is not damaged

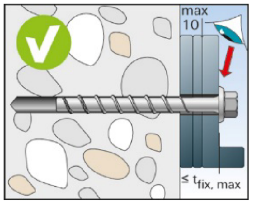
1.



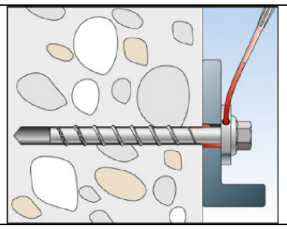
2.



3.



Optional:
It is permissible to adjust the screw twice.
Therefore the screw may be untightened to a maximum of L_{adj} = 20 mm off the surface of the initial fixture. The total permissible thickness of shims added during the adjustment process is t_{adj} = 10 mm.



For seismic performance category C2 applications:
The gap between screw shaft and fixture must be filled with mortar; mortar compressive strength ≥ 50 N/mm² (e. g. UPM 44 or UPM 55). As an aid for filling the gap, the filling disc FFD is recommended.
