DÉCLARATION DES PERFORMANCES

No 0043 – FR

1. Code d'identification unique du produit type: **Goujon d'ancrage Upat MAX**

2. Usage(s) prévu(s):

Produit	Usage(s) prévu(s)
Cheville métallique pour utilisation dans le béton (charges lourdes)	Pour fixer et/ou soutenir des éléments structuraux en béton ou des éléments lourds tels que bardages et plafonds suspendus, voir annexe, en particulier annexes B 1 - B 4

3. Fabricant: **Upat Vertriebs GmbH, Otto-Hahn-Straße 15, 79211 Denzlingen, Allemagne**

4. Mandataire: **--**

5. Système(s) d'évaluation et de vérification de la constance des performances: **1**

6a. Norme harmonisée: ---

  Organisme(s) notifié(s): ---

6b. Document d'évaluation européen: **ETAG 001; 2013-04**

  Évaluation technique européenne: **ETA-10/0170; 2015-05-07**

  Organisme d'évaluation technique: **DIBt**

  Organisme(s) notifié(s): **1343 – MPA Darmstadt**

7. Performance(s) déclarée(s):

Résistance mécanique et stabilité (BWR 1)

Caractéristique essentielle	Performance
Résistance caractéristique pour des charges statiques et quasi-statiques pour un dimensionnement selon ETAG 001 annexe C ou CEN/TS 1992-4:2009	Voir annexe, en particulier annexes C 1 - C 3
Résistance caractéristique pour les catégories de performances sismiques C1 et C2	Voir annexe, en particulier annexes C 6 - C 7
Déplacements pour des charges statiques et quasi-statiques	Voir annexe, en particulier annexe C 8
Déplacements sous charges sismiques	Voir annexe, en particulier annexe C 9

Protection contre le feu (BWR 2)

Caractéristique essentielle	Performance
Réaction au feu	La cheville remplit les exigences de la classe A 1
Résistance caractéristique au feu	Voir annexe, en particulier annexe C 4, C 5

8. Documentation technique appropriée et/ou documentation technique spécifique: ---

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

Andreas Bucher, Dipl.-Ing.   Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2015-05-18

- Cette déclaration des performances a été émise en différentes langues. En cas de divergences d'interprétation, la version anglaise prévaut toujours.

- L'annexe contient des informations volontaires et complémentaires en langue anglaise dépassant les exigences légales (spécifiées en langage neutre).

Specific Part

1   Technical description of the product

The UPAT Anchor bolt MAX is an anchor made of galvanised steel (MAX) or made of stainless steel (MAX A4) or high corrosion resistant steel (MAX C) which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

2   Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3   Performance of the product and references to the methods used for its assessment

3.1   Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for static and quasi static action for design according to ETAG 001 Annex C or CEN/TS 1992-4:2009	See Annex C 1 to C 3
Characteristic resistance for Seismic performance categories C1 and C2	See Annex C 6 to C 7
Displacements under static and quasi static action	See Annex C 8
Displacements under seismic action	See Annex C 9

3.2   Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Characteristic resistance under fire exposure	See Annex C 4,C 5

3.3   Hygiene, health and the environment (BWR 3)
Not applicable.

3.4   Safety in use (BWR 4)
The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

3.5   Protection against noise (BWR 5)
Not applicable.

3.6   Energy economy and heat retention (BWR 6)
Not applicable.

3.7   Sustainable use of natural resources (BWR 7)

The sustainable use of natural resources was not investigated.

3.8   General aspects

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

4   Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 24 June 1996 (96/582/EC) (OJ L 254 of 08.10.96 p. 62-65), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Metal anchors for use in concrete (heavy-duty type)	For fixing and/or supporting concrete structural elements or heavy units such as cladding and suspended ceilings	—	1

Cone bolt manufactured by cold – forming:
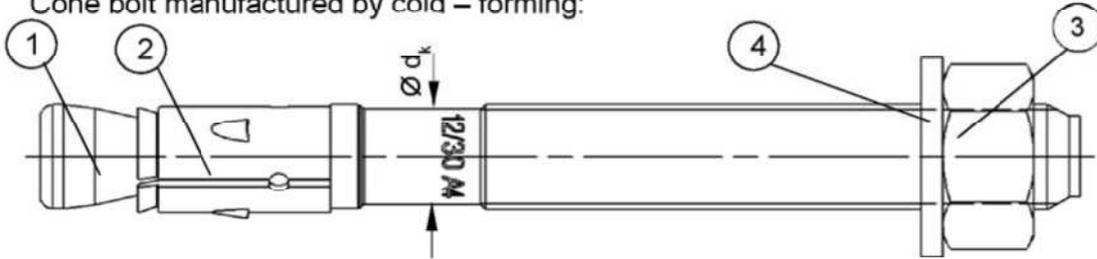

Cone bolt manufactured by turning:
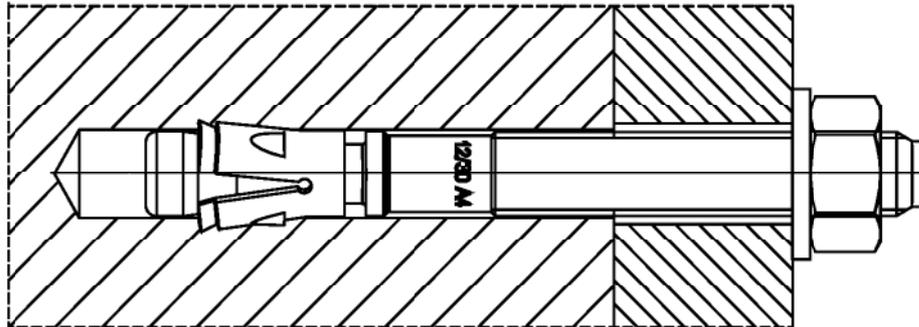

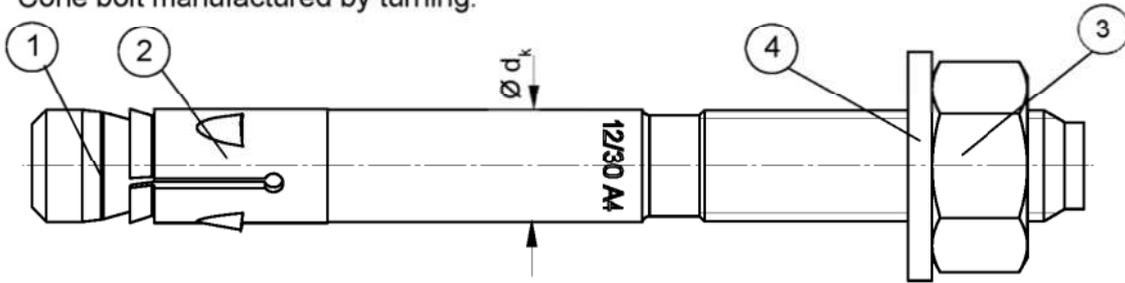

① Cone bolt (cold – formed or turned)
② Expansion sleeve
③ Hexagon nut
④ Washer

Seismic action for Performance Category	C1	-		✓		-	
	C2[1]	-		✓		-	

[1] MAX C: Only valid for cold-formed version (see A1)

Base materials:
- Reinforced and unreinforced normal weight concrete (cracked and non-cracked according to EN 206-1:2000.
- Strength classes C20/25 to C50/60 according to EN 206-1:2000

Use conditions (Environmental conditions):
- Structures subject to dry internal conditions (MAX, MAX A4, MAX C).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist.
  (MAX A4, MAX C).
- Structures subject to external atmospheric exposure and permanently damp internal, if other particular aggressive conditions exist
  (MAX C).
  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:
- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are to be designed in accordance with (please choose the relevant design method):
  - ETAG 001, Annex C, design method A, Edition August 2010 or
  - CEN/TS 1992-4:2009, design method A
- Anchorages under seismic actions (cracked concrete) are to be designed in accordance with:
  - EOTA Technical Report TR 045, Edition February 2013
  - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure.
  - Fastenings in stand-off installation or with a grout layer under seismic action are not allowed.
- Anchorages under fire exposure are to be designed in accordance with:
  - EOTA Technical Report TR 020, Edition May 2004
  - CEN/TS 1992-4:2009, Annex D
  - It must be ensured that local spalling of the concrete cover does not occur.

Intended Use Minimum thickness, minimum spacings and edge distances	

Table B4: Minimum spacings and minimum edge distances of anchors according to **TR 020 and ETAG 001, Annex C** under **fire exposure** and according to **CEN/TS 1992-4: 2009, Annex D** under **fire exposure**

Type of anchor / size			MAX, MAX A4, MAX C					
			M8	M10	M12	M16	M20	M24
Spacing	s_{min}	[mm]	35	40	45	60	95	100
Edge distance	c_{min}	[mm]	$c_{min} = 2 \times h_{ef}$, for fire exposure from more than one side $c_{min} \geq 300$ mm					

Installation instructions

The fitness for use of the anchor can only be assumed if the anchor is installed as follows:
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Use of the anchor only as supplied by the manufacturer without exchanging the components of the anchor
- Checking before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply.
- Check of concrete being well compacted, e.g. without significant voids
- Edge distances and spacing not less than the specified values without minus tolerances.

No.	Description
1	Create drill hole
	Drill hole perpendicular to concrete surface, positioning without damaging the reinforcement. In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application.
2	Clean bore hole
3	Set anchor
4	Expand anchor with prescribed installation torque T_{inst}
5	Finished installation

M16	6,6	12,6	2,3	5,3	11,0	2,3

Concrete pryout failure: In Equation (5.6) of ETAG 001, Annex C, 5.2.3.3 the $k_{(3)}$-factor of Table C3 and the relevant values of $N_{0Rk,c,fi}$ of Table C4 have to be considered.

Concrete edge failure: The characteristic resistance $V^0_{Rk,c,fi}$ in concrete C20/25 to C50/60 is determined by: $V^0_{Rk,c,fi} = 0,25 \times V^0_{Rk,c}$ (R30, R60, R90), $V^0_{Rk,c,fi} = 0,20 \times V^0_{Rk,c}$ (R120) with $V^0_{Rk,c}$ as initial value of the characteristic resistance in cracked concrete C20/25 under normal temperature according to ETAG 001, Annex C, 5.2.3.4.

In absence of other national regulations the partial safety factor for resistance under fire exposure $\gamma_{M,fi} = 1,0$ is recommended.

UPAT Anchor bolt MAX, MAX A4, MAX C	**Annex C 5**
Performances: Characteristic values of resistance under **shear** loads and **fire exposure** (Design according to **TR 020 and ETAG 001, Annex C** or CEN/TS 1992-4:2009, Annex D)	

Table C6: Valid anchor sizes for seismic design, **performance category C1, standard and reduced anchorage depth**

Type of anchor / size		MAX, MAX A4, MAX C
