8. Relevant teknisk dokumentation og/eller specifik teknisk dokumentation:

Ydeevnen for den vare, der er anført ovenfor, er i overensstemmelse med den deklarerede ydeevne. Denne ydeevnedeklaration er udarbejdet i overensstemmelse med forordning (EU) nr. 305/2011 på eneansvar af den fabrikant, der er anført ovenfor.

Underskrevet for fabrikanten og på dennes vegne af:

Thilo Pregartner, Dr.-Ing.
Tumlingen, 2020-10-06

Peter Schillinger, Dipl.-Ing.

Denne DoP er tilgængelig i forskellige sprogversioner. I tilfælde af fortolkningsmæssig uoverensstemmelse, henvises der til den engelske version, som altid er gældende.

Appendikset indeholder frivillige og udvidede informationer på engelsk. Disse overgår de lokale (sprogneutrale) retslige krav.

Specific Part

1 Technical description of the product

The Upat Sleeve Anchor UHS, UHS-I is an anchor made of galvanised steel (sizes with external diameter 10, 12, 15, 18, 24, 28 and 32, sizes with internal thread 12/M6 I, 12/M8 I, 15/M10 I and 15/M12 I) or stainless steel (sizes with external diameter 10, 12, 15, 18 and 24, sizes with internal thread 12/M6 I, 12/M8 I, 15/M10 I and 15/M12 I) which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1, C 2, C 7
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 3 and C 4
Displacements (static and quasi-static loading)	See Annex C 10, C 11
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 8, C 9, C 11
Durability	See Annex B 1

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 5, C 6

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330232-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Type hexagon screw **S**

1) Anchor type not part of the assessment

2) No performance assessed

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres (cracked and uncracked) of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (UHS, UHS R, UHS-I, UHS-I R)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal conditions, if no particular aggressive conditions exist (UHS R, UHS-I R)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where deicing materials are used)

Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018

Appendix 8 / 22

Installation instructions:

- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener
- Checking before placing the fastener to ensure that the strength class of the concrete in which the fastener is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply
- Check of concrete being well compacted, e.g. without significant voids
- Hammer or hollow drilling according to Annex B5 and B6
- Drill hole created perpendicular $\pm 5^\circ$ to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application

Hollow drilling		Continue with step 2, 3, and 4			
Hammer drilling					
Step	1	2	3	4	

Step	Description	
1	Create drill hole with hammer drill, clean drill hole	Create drill hole with hollow drill and vacuum cleaner
2	Hammering in the anchor flushed with the surface of the concrete	
3	Tighten the anchor. The included hexagon bit in the package should be used. Other tightening methods are allowed. Tighten the anchor in the concrete until the gap U is 3 - 5 mm or the required setting torque T_{inst} is reached. Only one of the above requirements has to be fulfilled.	
4	Attach the fixture and use a suitable screw or anchor rod. The length of the screw or anchor rod should be determined depending on the thickness of fixture t_{fix} , admissible tolerances, and available thread length $l_{s,max}$ and $l_{s,min}$ including the gap U. Tighten the screw with the torque $\leq \max T_{fix}$ ($\max T_{fix}$ see table B3.1)

Appendix 20 / 22

Table C10.1: Displacements under static and quasi static **tension loads** for UHS and UHS R

Anchor type UHS-S, -SK, -B, -H and UHS-S R, -SK R, -B R, -H R			UHS 10	UHS 12	UHS 15	UHS 18	UHS 24	UHS 28	UHS 32
Tension load cracked concrete	N	[kN]	3,6	5,7	7,6	11,9	17,1	24,0	31,5
Corresponding displacements	$\frac{\delta_{N0}}{\delta_{N\infty}}$	[mm]	1,0	1,0	1,0	1,0	1,0	0,7	0,7
			1,7	1,6	1,6	1,6	1,8	1,3	1,1
Tension load uncracked concrete	N	[kN]	6,0	11,2	14,1	17,2	24,0	33,6	44,2
Corresponding displacements	$\frac{\delta_{N0}}{\delta_{N\infty}}$	[mm]	0,6	1,0	1,0	1,0	1,0	0,3	0,3
			1,7	1,6	1,6	1,6	1,8	1,3	1,1

Table C10.2: Displacements under static and quasi static **tension loads** for UHS-I and UHS-I R

Anchor type UHS-I and UHS-I R			UHS 12/M6 I UHS 12/M8 I	UHS 15/M10 I UHS 15/M12 I
Tension load cracked concrete	N	[kN]	4,3	5,7
Tension load uncracked concrete			9,5	14,1
Corresponding displacements	δ_{N0}	[mm]	1,7	1,9
	$\delta_{N\infty}$		2,2	2,9

Table C10.3: Displacements under static and quasi static **shear loads** for UHS-S and UHS-SK

Anchor type UHS-S and UHS-SK			UHS 10	UHS 12	UHS 15	UHS 18	UHS 24	UHS 28	UHS 32
Shear load in cracked and uncracked concrete	V	[kN]	10,3	18,9	33,7	43,4	83,4	99,4	124,0
Corresponding displacements	$\frac{\delta_{V0}}{\delta_{V\infty}}$	[mm]	2,4	2,7	4,4	5,0	7,0	6,0	8,0
			3,6	4,1	6,6	7,5	10,5	9,0	12,0

Table C10.4: Displacements under static and quasi static **shear loads** for UHS-B and UHS-H

Anchor type UHS-B and UHS-H			UHS 10	UHS 12	UHS 15	UHS 18	UHS 24	UHS 28	UHS 32
Shear load in cracked and uncracked concrete	V	[kN]	8,9	15,4	23,4	35,4	68,0	83,4	96,6
Corresponding displacements	$\frac{\delta_{V0}}{\delta_{V\infty}}$	[mm]	2,2	2,3	3,0	5,0	7,0	5,0	5,0
			3,3	3,5	4,5	7,5	10,5	7,5	7,5

Upat Sleeve Anchor UHS, UHS-I

Performances

Displacements under tension and shear loads

Annex C 10

Table C11.1: Displacements under static and quasi static **shear loads** for UHS-S R, UHS-SK R, UHS-B R and UHS-H R

Anchor type UHS-S R, -SK R, -B R, -H R		UHS 10	UHS 12	UHS 15	UHS 18	UHS 24
Shear load in cracked and uncracked concrete	V [kN]	10,3	16,0	24,6	37,7	68,0
Corresponding displacements	$\frac{\delta_{V0}}{\delta_{V\infty}}$ [mm]	3,5	3,5	3,7	5,7	9,0
		5,3	5,3	5,6	8,6	13,5

Table C11.2: Displacements under static and quasi static **shear loads** for UHS-I and UHS-I R

Anchor type: UHS-I and UHS-I R		UHS 12/M6 I	UHS 12/M8 I	UHS 15/M10 I	UHS 15/M12 I
Shear load in cracked and uncracked concrete	V [kN]	4,6	8,3	13,3	13,7
Corresponding displacements	$\frac{\delta_{V0}}{\delta_{V\infty}}$ [mm]	2,6	2,6	2,2	2,2
		3,9	3,9	3,3	3,3

Table C11.3: Displacements under **tension loads** for **seismic performance category C2** for UHS and UHS R

Anchor type UHS-S, -SK, -B, -H and UHS-S R, -SK R, -B R, -H R		UHS 12	UHS 15	UHS 18	UHS 24	UHS 28	UHS 32
Displacement DLS $\delta_{N,C2}$ (DLS) [mm]		1,55	2,63	2,04	4,26	3,06	
Displacement ULS $\delta_{N,C2}$ (ULS)		8,71	11,07	7,30	11,70	11,44	

Table C11.4: Displacements under **shear loads** for **seismic performance category C2** for UHS and UHS R

Anchor type UHS-S, -SK and UHS-S R, -SK R		UHS 12	UHS 15	UHS 18	UHS 24	UHS 28	UHS 32
Displacement DLS $\delta_{V,C2}$ (DLS) [mm]		3,53	4,18	4,67	5,59	4,79	
Displacement ULS $\delta_{V,C2}$ (ULS)		6,62	7,38	9,03	14,09	9,95	

Anchor type UHS-B, -H and UHS-B R, -H R		UHS 12	UHS 15	UHS 18	UHS 24	UHS 28	UHS 32
Displacement DLS $\delta_{V,C2}$ (DLS) [mm]		3,42	4,26	4,29	4,79		
Displacement ULS $\delta_{V,C2}$ (ULS)		5,26	6,66	7,95	7,69	9,95
