PRESTANDADEKLARATION

DoP 0206

för Upat UKA3 Plus (Metallankare för användning i betong)

SV

1. Produktypens unika identifikationskod: DoP 0206
2. Avsedd användning/avsedda användningar: Infästning i efterhand i sprucken och osprucken betong, se bilaga, särskilt bilagor B1 - B7.

3. Tillverkare: Upat Vertriebs GmbH, Bebelstraße 11, 79108 Freiburg im Breisgau, Tyskland

4. Tillverkarens representant: -

5. System för bedömning och fortlöpande kontroll av prestanda: 1

6. Europeiskt bedömningsdokument: ETAG 001, Part 5, April 2013, används som EAD
Europeisk teknisk bedömning: ETA-17/0197; 2017-04-03
Tekniskt bedömningsorgan: DIBt- Deutsches Institut für Bautechnik
Anmält/anmälta organ: 2873 TU Darmstadt

7. Angiven prestanda:

Mekanisk hållfasthet och stabilitet (BWR 1)

Karakteristisk bärformåga för spänning (för statisk och kvasi-statisk belastning):

Stålets motståndskraft: Bilagor C1, C2
Motstånd mot kombinerat fel vid utdragnings och betongkon: Bilaga C4, C5
Motstånd i betongkonken: Bilaga C3
Kantavstånd för att slippa sprickor under last: Bilaga C3
Kraftighet: Bilagor C3, C4, C5
Maximal vridkraft vid installation: Bilagor B3, B4
Minsta kant- och axelavstånd: Bilagor B3, B4

ψ_{sus}^0 = NPD

Karakteristisk bärformåga för skjutning (för statisk och kvasi-statisk belastning):

Motstånd i stålet: Bilagor C1, C2
Motstånd mot fläckning: Bilaga C3
Motstånd mot skador i betong: Bilaga C3

Karakteristiskt motstånd och Förskjutningar för seismiska prestandakategorier C1 och C2:

Motstånd mot draglast, förskjutningar, kategori C1: NPD
Motstånd mot draglast, förskjutningar, kategori C2: NPD
Motstånd mot tvärlast, förskjutningar, kategori C1: NPD
Motstånd mot tvärlast, förskjutningar, kategori C2: NPD
Faktor cirkulärt hål: NPD

Förflyttningar under kort- och långvarig belastning:

Förflyttningar under kort- och långvarig belastning: Bilaga C6

Hygien, hälsa och miljö (BWR 3)

Innehåll, frisläppning och / eller frisläppning av farliga ämnen: NPD

8. Lämplig teknisk dokumentation och/eller särskild teknisk dokumentation: -

Prestandan för ovanstående produkt överensstämmer med den angivna prestandan. Denna prestandadeklaration har utfärdats i enlighet med förordning (EU) nr 305/2011 på eget ansvar av den tillverkare som anges ovan.

Undertecknad på tillverkarens vägnar av:

Dr.-Ing. Oliver Geibig, Verkställande direktör affärsheter och teknik
Tumlingen, 2021-03-01

Jürgen Grün, Verkställande direktör kemi och kvalitet

Denna DoP har förberetts på olika språk. I händelse av tvist om tolkningen ska den engelska versionen alltid råda.

Bilagan innehåller frivilliga och kompletterande information på engelska som överskrider (det specifika språkets) lagkrav.

Specific Part

1 Technical description of the product

The Upat UKA3 Plus is a bonded anchor for use in concrete consisting of a capsule UKA3 Plus and a steel element according to Annex A1.

The capsule UKA3 Plus is placed in the hole and the steel element is driven by machine with simultaneous hammering and turning.

The anchor rod is anchored via the bond between steel element, chemical mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|---|----------------------|
| Characteristic values under static and quasi-static action, Displacements | See Annex C 1 to C 6 |

3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
|---------------------------------|--|
| Reaction to fire | Anchorages satisfy requirements for Class A1 |
| Resistance to fire | No performance assessed |

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

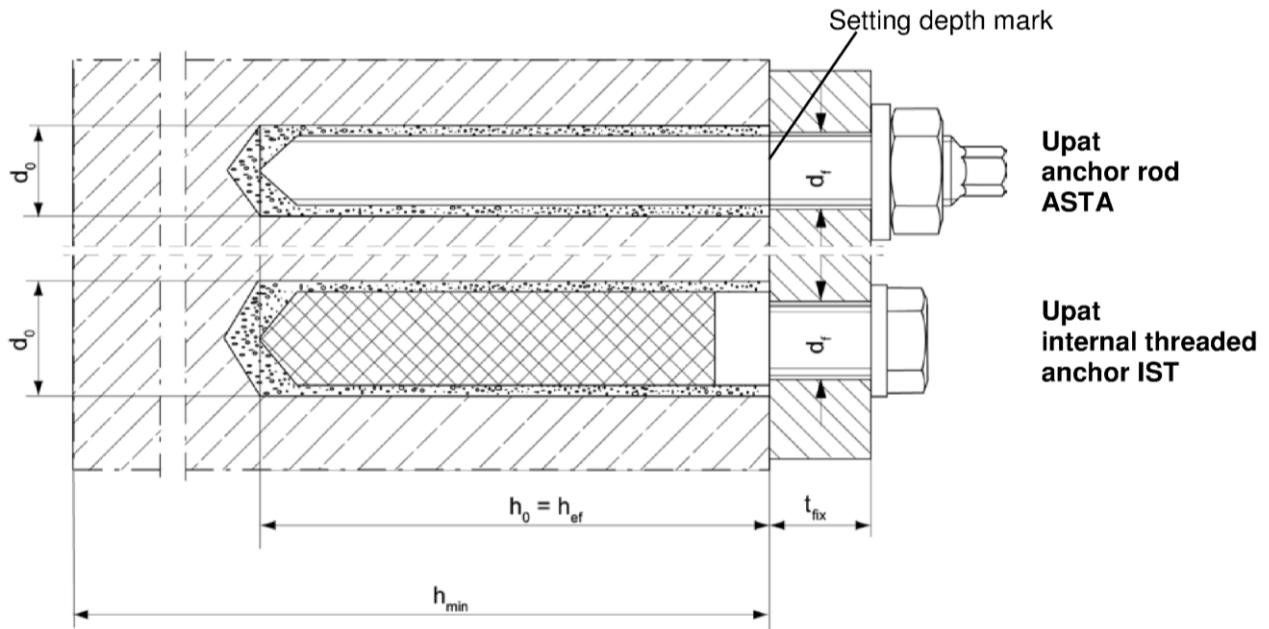

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [96/582/EC].

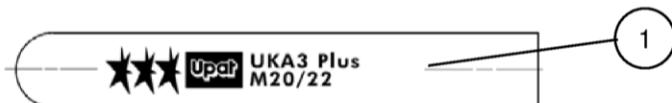

The system to be applied is: 1

| Intended Use Specifications (part 1) | | | | |

Specifications of intended use (part 2)

Base materials:

- Reinforced or unreinforced normal weight concrete Strength classes C20/25 to C50/60 according to EN 206-1:2000

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure, to permanently damp internal conditions or in other particular aggressive conditions (high corrosion resistant steel)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with EOTA Technical Report TR 029 "Design of bonded anchors" Edition September 2010 or CEN/TS 1992-4:2009

Installation:

- Anchor installation has to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to on installation
- Overhead installation is allowed

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

| | | |
|---|--|--|
| 1 |  | <p>Specified drill hole depth h_0 should be adhered to (e.g. mark on the drill bit). Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Tables B2, B3</p> |
| 2 |   | <p>When reaching the drill hole depth h_0 pull out the drill bit whilst power drill is switched on. To reduce the drill dust in the drill hole repeat this step minimum three times, beginning from the drill hole bottom (discharging the bore hole)</p> <p>Trickling of the bore dust into the drill hole has to be avoided. (e.g. with exhausting the drill dust) Blowing out or brushing the drill hole is not necessary</p> |

Go to step 3

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

| | | |
|---|---|---|
| 1 |  | <p>Check a suitable hollow drill (see Table B1) for correct operation of the dust extraction</p> |
| 2 |  | <p>Use a suitable dust extraction system, e.g. Bosch GAS 35 M AFC or a comparable dust extraction system with equivalent performance data</p> <p>Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Diameter of drill hole d_0 and drill hole depth h_0 see Tables B2, B3</p> |

Intended use
Installation instructions part 1

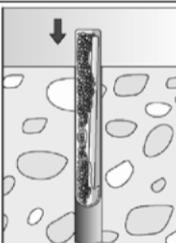

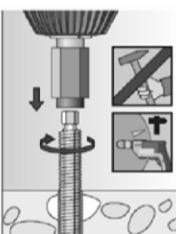

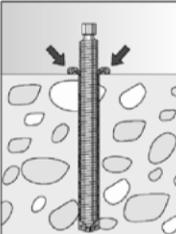

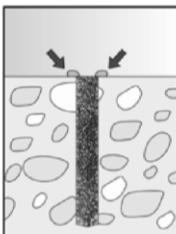

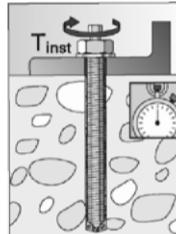

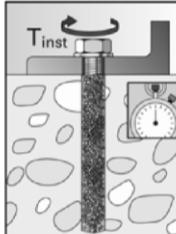

Annex B 6

Appendix 10 / 17

Installation instructions part 2

Installation of capsule UKA3 Plus with Upat anchor rods ASTA or

Upat internal threaded anchors IST

| | | | | |
|---|--|--|---|--|
| 3 |  | Push the capsule UKA3 Plus into the drill hole |  | Depending on the anchor being installed, use a suitable setting tool (e.g. MW-SDS) |
| 4 |  |  | Only use clean and oil-free anchors. Using a suitable adapter, drive the ASTA or Upat internal threaded anchor IST into the capsule using a hammer drill set on rotary hammer action. Stop when the anchor reaches the bottom of the hole and is set to the correct embedment depth | |
| 5 |  |  | When reaching the correct embedment depth, excess mortar must be emerged from the mouth of the drill hole | |
| 6 |  |  | Wait for the specified curing time t_{cure} see Table B7 Mounting the fixture $T_{inst,max}$ see Table B2, B3 | |
