DECLARATION OF PERFORMANCE

No. 0065 – EN

1. Unique identification code of the product-type: **Injection anchor system UPM 44**

2. Intended use/es:

Product	Intended use/es
Bonded anchor for use in concrete	Anchorages for which requirements for mechanical resistance and stability and safety in use shall be fulfilled. They are for fixing and/or supporting structural elements (which contribute to the stability of the works) or heavy units, see appendix, especially Annexes B 1 to B 8

3. Manufacturer: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Germany**

4. Authorised representative: **--**

5. System/s of AVCP: **1**

6a. Harmonised standard: ---

Notified body/ies: ---

6b. European Assessment Document: **ETAG 001; 2013-04**

European Technical Assessment: **ETA-02/0022; 2015-08-19**

Technical Assessment Body: **DIBt**

Notified body/ies: **1343 – MPA Darmstadt**

7. Declared performance/s:

Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for design according to TR 029	See appendix, especially Annexes C 1 to C 6
Characteristic resistance for design according to CEN/TS 1992-4:2009	See appendix, especially Annexes C 7 to C 12
Displacements under tension an shear loads	See appendix, especially Annexes C 13, C 14

Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A 1
Resistance to fire	NPD

8. Appropriate Technical Documentation and/or Specific Technical Documentation: ---

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2015-08-26

- This DoP has been prepared in different languages. In case there is a dispute on the interpretation the english version shall always prevail.
- The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

Specific Part

1 Technical description of the product

The injection anchor system UPM 44 is a bonded anchor consisting of a cartridge with injection mortar UPM 44, UPM 44 Express, UPM 44 Relax and a steel element. The steel element consist of

- a Upat threaded rod of sizes M6 to M30 or
- a Upat internal threaded anchor IST of sizes M8 to M20 or
- a reinforcing bar of sizes ϕ = 8 to 28 mm or
- a Upat rebar anchor of sizes M12 to M24

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for design according to TR 029	See Annex C 1 to C 6
Characteristic resistance for design according to CEN/TS 1992-4:2009	See Annex C 7 to C 12
Displacements under tension and shear loads	See Annex C 13 / C 14

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

[1)] Only coaxial cartridges: 380 ml, 400 ml and 410 ml

Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions exist
  (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel)
  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages have to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with TR 029 "Design of bonded anchors", Edition September 2010 or CEN/TS 1992-4:2009

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Overhead installation allowed

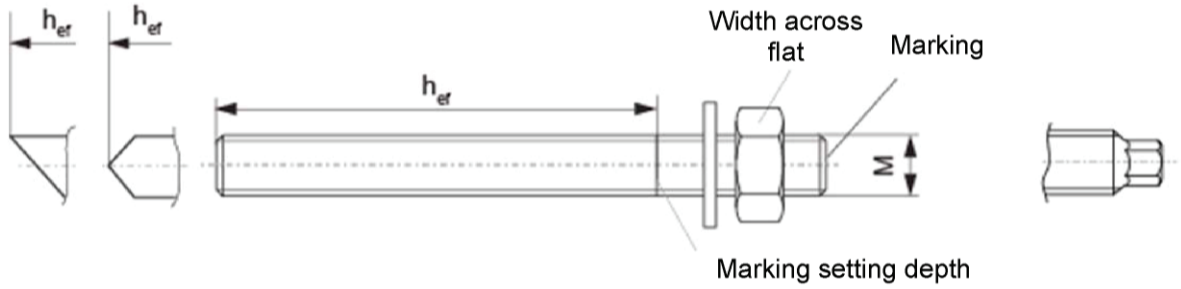
[1)] For larger clearance holes in the fixture see TR 029, 4.2.2.1 or CEN/TS 1992-4-1:2009, 5.2.3.1

Upat threaded rods



Marking:
Property class 8.8 or high corrosion-resistant steel C, property class 80: •
Stainless steel A4, property class 50 or high corrosion-resistant steel C, property class 50:••

Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:
- Materials, dimensions and mechanical properties according Annex A 3, Table A1
- Inspection certificate 3.1 according to EN 10204:2004, the documents should be stored
- Marking of embedment depth

Injection anchor system UPM 44	**Annex B 2**
Intended Use Installation parameters threaded rods	

Table B3: Installation parameters Upat internal threaded anchors IST

Size			M8	M10	M12	M16	M20

>+30	to	+40		35	30	+40		2	4

[1] For wet concrete or flooded hole the curing time must be doubled.

Injection anchor system UPM 44	**Annex B 6**
Intended Use Cleaning tools / Processing - and curing times	

Installation instructions part 1
Drilling and cleaning the hole

1		Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Tables **B2, B3, B4**, **B5**.		
2		$h_{ef} \leq 12d$ and $d_0 < 18$ mm: Blow out the drill hole four times by hand.		$h_{ef} > 12d$ and/or $d_0 \geq 18$ mm: Blow out the drill hole four times, using oil-free compressed air ($p > 6$ bar).
3		Brush the drill hole four times using an adequate steel brush (see Table **B6**).		
4		$h_{ef} \leq 12d$ and $d_0 < 18$ mm: Blow out the drill hole four times by hand.		$h_{ef} > 12d$ and/or $d_0 \geq 18$ mm: Blow out the drill hole four times, using oil-free compressed air ($p > 6$ bar).

Preparing the cartridge

5		Twist off the sealing cap.
6		Twist on the static mixer (the spiral in the static mixer must be clearly visible).
7		Place the cartridge into the dispenser.
8		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.

Injection anchor system UPM 44	**Annex B 7**
Intended Use Installation instructions part 1	

Installation instructions part 2

Injection of the mortar

9		Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole to eliminate voids.		For drill hole depth ≥ 150 mm use an extension tube.

Installation Upat anchor rods or internal threaded anchors IST

10	 	Only use clean and oil-free anchor elements. Press the anchor rod or Upat internal threaded anchor down to the bottom of the hole, turning it slightly while doing so. After inserting the anchor element, excess mortar must emerge around the anchor element.		
		For overhead installation support the anchor element with wedges.		For push through installation fill the annular gap also with mortar.
11		Wait for the specified curing time t_{cure} see Table **B7**.		
12		Mounting the fixture $T_{inst,max}$ see Tables **B2** or **B3**		

Installing reinforcing bars and Upat rebar anchors

10		Only use clean and oil-free rebars. Mark the reinforcing bar for setting depth. Using a turning movement, push the reinforcing bar or Upat rebar anchor vigorously into the filled hole up to the insertion depth marking. When reaching the setting depth marking surplus mortar must emerge around the anchor.		
11		Wait for the specified curing time t_{cure} see Table **B7**.		
12			Mounting the fixture $T_{inst,max}$ see Table **B5**	

Injection anchor system UPM 44

Size			M12	M16	M20	M24
Installation safety factor	γ_{inst}	[-]	1,0			
Steel failure without lever arm						
Characteristic resistance	$V_{Rk,s}$	[kN]	30	55	86	124
Partial safety factor	$\gamma_{Ms,V}$ [1)]	[-]	1,56			
Ductility factor acc. to CEN/TS 1992-4-5:2009 Section 6.3.2.1	k_2	[-]	0,8			
Steel failure with lever arm						
Characteristic resistance	$M^0_{Rk,s}$	[Nm]	92	233	454	785
Partial safety factor	$\gamma_{Ms,V}$ [1)]	[-]	1,56			
Concrete pryout failure						
Factor in equation of CEN/TS 1992-4-5, Section 6.3.3	k_3	[-]	2,0			
Concrete edge failure						
Outside diameter of anchor	d_{nom}	[mm]	12	16	20	24

[1)] In absence of other national regulations

Injection anchor system UPM 44	**Annex C 12**
Performances Characteristic values of resistance for reinforcing bars and Upat rebar anchors under shear loads (Design according to CEN/TS 1992-4)	

Table C17: Displacements under tension load [1] for threaded rods

Size		M6	M8	M10	M12	M16	M20	M24	M27	M30
Un-cracked concrete										
δ_{N0}-Factor	[mm/N/mm²]	0,09	0,09	0,09	0,10	0,10	0,10	0,10	0,11	0,12
$\delta_{N\infty}$-Factor	[mm/N/mm²]	0,10	0,10	0,10	0,12	0,12	0,12	0,13	0,13	0,14
Cracked concrete										
δ_{N0}-Factor	[mm/N/mm²]	--	--	0,12	0,12	0,13	0,13	0,13	0,14	0,15
$\delta_{N\infty}$-Factor	[mm/N/mm²]	--	--	0,27	0,30	0,30	0,30	0,35	0,35	0,40

[1] Calculation of the displacement
$\delta_{N0} = \delta_{N0}\text{-Factor} \cdot \tau$
$\delta_{N\infty} = \delta_{N\infty}\text{-Factor} \cdot \tau$

Table C18: Displacements under shear load [1] for threaded rods

Size		M6	M8	M10	M12	M16	M20	M24	M27	M30
δ_{V0}-Factor	[mm/kN]	0,11	0,11	0,11	0,10	0,10	0,09	0,09	0,08	0,07
$\delta_{V\infty}$-Factor	[mm/kN]	0,12	0,12	0,12	0,11	0,11	0,10	0,10	0,09	0,09

[1] Calculation of the displacement
$\delta_{V0} = \delta_{V0}\text{-Factor} \cdot V$
$\delta_{V\infty} = \delta_{V\infty}\text{-Factor} \cdot V$

Table C19: Displacements under tension load [1] for Upat internal threaded anchors IST

Size		M8	M10	M12	M16	M20
δ_{N0}-Factor	[mm/N/mm²]	0,1	0,11	0,12	0,13	0,14
$\delta_{N\infty}$-Factor	[mm/N/mm²]	0,13	0,14	0,15	0,16	0,18

[1] Calculation of the displacement
$\delta_{N0} = \delta_{N0}\text{-Factor} \cdot \tau$
$\delta_{N\infty} = \delta_{N\infty}\text{-Factor} \cdot \tau$

Table C20: Displacements under shear load [1] for Upat internal threaded anchors IST

Size		M8	M10	M12	M16	M20
δ_{V0}-Factor	[mm/kN]	0,12	0,12	0,12	0,12	0,12
$\delta_{V\infty}$-Factor	[mm/kN]	0,14	0,14	0,14	0,14	0,14

[1] Calculation of the displacement
$\delta_{V0} = \delta_{V0}\text{-Factor} \cdot V$
$\delta_{V\infty} = \delta_{V\infty}\text{-Factor} \cdot V$

Table C21: Displacements under tension load [1] for reinforcing bars

Size ϕ	[mm]	8	10	12	14	16	20	25	28
Un-cracked concrete									
δ_{N0}-Factor	[mm/N/mm²]	0,09	0,09	0,10	0,10	0,10	0,10	0,10	0,11
$\delta_{N\infty}$-Factor	[mm/N/mm²]	0,10	0,10	0,12	0,12	0,12	0,12	0,13	0,13
Cracked concrete									
δ_{N0}-Factor	[mm/N/mm²]	--	0,12	0,12	0,13	0,13	0,13	0,13	0,14
$\delta_{N\infty}$-Factor	[mm/N/mm²]	--	0,27	0,30	0,30	0,30	0,30	0,35	0,37

[1] Calculation of the displacement
$\delta_{N0} = \delta_{N0}\text{-Factor} \cdot \tau$
$\delta_{N\infty} = \delta_{N\infty}\text{-Factor} \cdot \tau$

Table C22: Displacements under shear load [1] for reinforcing bars

Size ϕ	[mm]	8	10	12	14	16	20	25	28
δ_{V0}-Factor	[mm/kN]	0,11	0,11	0,10	0,10	0,10	0,09	0,09	0,08
$\delta_{V\infty}$-Factor	[mm/kN]	0,12	0,12	0,11	0,11	0,11	0,10	0,10	0,09

[1] Calculation of the displacement
$\delta_{V0} = \delta_{V0}\text{-Factor} \cdot V$
$\delta_{V\infty} = \delta_{V\infty}\text{-Factor} \cdot V$

Table C23: Displacements under tension load [1] for Upat rebar anchor

Size		M12	M16	M20	M24
Un-cracked concrete					
δ_{N0}-Factor	[mm/N/mm²]	0,10	0,10	0,10	0,10
$\delta_{N\infty}$-Factor	[mm/N/mm²]	0,12	0,12	0,12	0,13
Cracked concrete					
δ_{N0}-Factor	[mm/N/mm²]	0,12	0,13	0,13	0,13
$\delta_{N\infty}$-Factor	[mm/N/mm²]	0,30	0,30	0,30	0,35

[1] Calculation of the displacement
$\delta_{N0} = \delta_{N0}\text{-Factor} \cdot \tau$
$\delta_{N\infty} = \delta_{N\infty}\text{-Factor} \cdot \tau$

Table C24: Displacements under shear load [1] for Upat rebar anchor

Size		M12	M16	M20	M24
δ_{V0}-Factor	[mm/kN]	0,1	0,1	0,09	0,09
$\delta_{V\infty}$-Factor	[mm/kN]	0,11	0,11	0,10	0,1

[1] Calculation of the displacement
$\delta_{V0} = \delta_{V0}\text{-Factor} \cdot V$
$\delta_{V\infty} = \delta_{V\infty}\text{-Factor} \cdot V$
