DEKLARACJA WŁAŚCIWOŚCI UŻYTKOWYCH

DoP: 0060

dla system iniekcyjny Upat UPM 55 (zaprawa do dodatkowego wklejania łączników zbrojeniowych) – PL

1. Niepowtarzalny kod identyfikacyjny typu wyrobu: **DoP: 0060**
2. Zamierzone zastosowanie: **Dodatkowe wklejanie łączników zbrojeniowych (prętów, EN 1992-1-1) poprzez łączenie na zakład z prętami w betonie zwykłym, zobacz dodatek, w szczególności aneksy B 1 do B 10**
3. Producent: **Upat Vertriebs GmbH, Bebelstraße 11, 79108 Freiburg im Breisgau, Niemcy**
4. Upoważniony przedstawiciel: --
5. System(-y) oceny i weryfikacji stałości właściwości użytkowych: 1
6. Europejski dokument oceny: **EAD 330087-00-0601**

Europejska ocena techniczna: **ETA-11/0417; 2018-06-27**

Jednostka dsoceny technicznej: **DIBt**

Jednostka lub jednostki notyfikowane: **1343 – MPA Darmstadt**

7. Deklarowane właściwości użytkowe:

Wytrzymałość mechaniczna i stabilność osadzenia (BWR 1)

- **Nośność charakterystyczna przy obciążeniu statycznym i quasi-statycznym:**
Zobacz dodatek, w szczególności aneks C 1

Ochrona przeciwpożarowa (BWR 2)

- **Reakcja na ogień: spełniają wymagania dla klasy A1**
- **Odporność na działanie ognia: NPD (Właściwości użytkowe nieustalone)**

8. Odpowiednia dokumentacja techniczna lub specjalna dokumentacja techniczna: ---

Właściwości użytkowe określonego powyżej wyrobu są zgodne z zestawem deklarowanych właściwości użytkowych. Niniejsza deklaracja właściwości użytkowych wydana zostaje zgodnie z rozporządzeniem (UE) nr 305/2011 na wyłączną odpowiedzialność producenta określonego powyżej.

W imieniu producenta podpisać(-a):

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2018-07-04

- Niniejsza Deklaracja Właściwości Użytkowych została przygotowana w różnych językach. W razie wątpliwości w interpretacji, wersja angielska jest zawsze miarodajna.
- Dodatek zawierający dobrowolne i uzupełniające informacje w języku angielskim, (neutralne językowo) a wykraczające poza wymagania prawne.

Specific Part

1 Technical description of the product

The subject of this European Technical Assessment is the post-installed connection, by anchoring or overlap connection joint, of reinforcing bars (rebars) in existing structures made of normal weight concrete, using the "Rebar connection with Upat Injection mortar UPM 55" in accordance with the regulations for reinforced concrete construction.

Reinforcing bars made of steel with a diameter ϕ from 8 to 40 mm or the rebar anchor FRA from sizes 12, 16 and 20 according to Annex A and injection mortar UPM 55 are used for rebar connections. The rebar is placed into a drilled hole filled with injection mortar and is anchored via the bond between rebar, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the rebar connection of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance under static and quasi-static loading	See Annex C 1

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD No. 330087-00-0601, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Installation anchor

Figure A1:

Overlap joint with existing reinforcement for rebar connections of slabs and beams

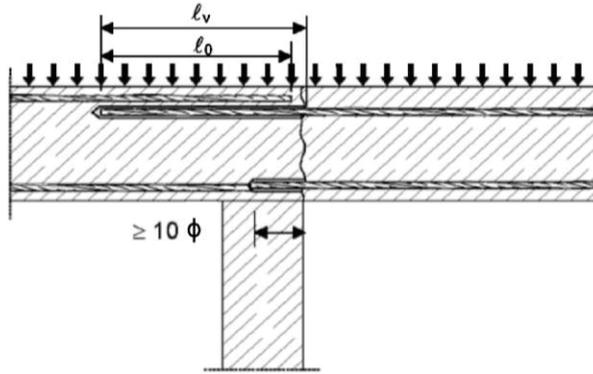

Figure A2:

Overlap joint with existing reinforcement at a foundation of a column or wall where the rebars are stressed

Figure A3:

End anchoring of slabs of beams (e.g. designed as simply supported)

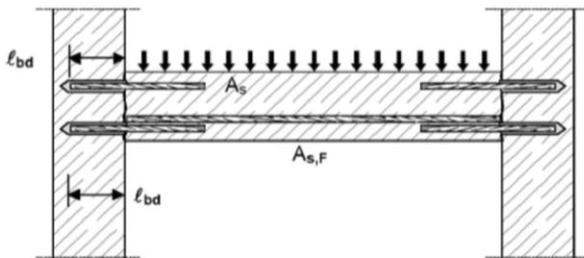

Figure A4:

Rebar connection for stressed primarily in compression

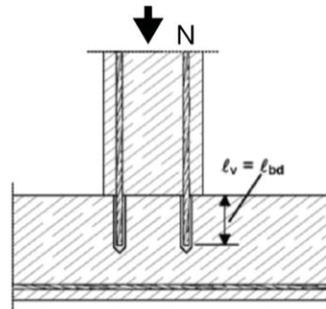

Figure A5:

Anchoring of reinforcement to cover the enveloped line of acting tensile force in the bending member

Note to **Figure A1** to **A5**:

In the Figures no traverse reinforcement is plotted, the traverse reinforcement shall comply with EN 1992-1-1: 2004+AC:2010.

Preparing of joints according to **Annex B 2**

Rebar connection with Upat injection mortar UPM 55

Product description

Installed condition and examples of use for rebars

Annex A 1

Installation anchor

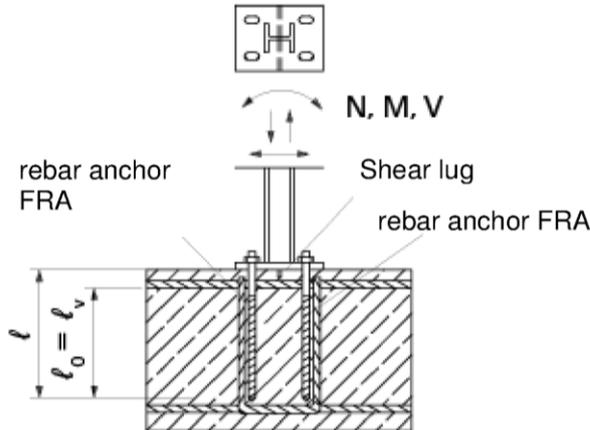

Figure A6: Lap to a foundation of a column under bending.

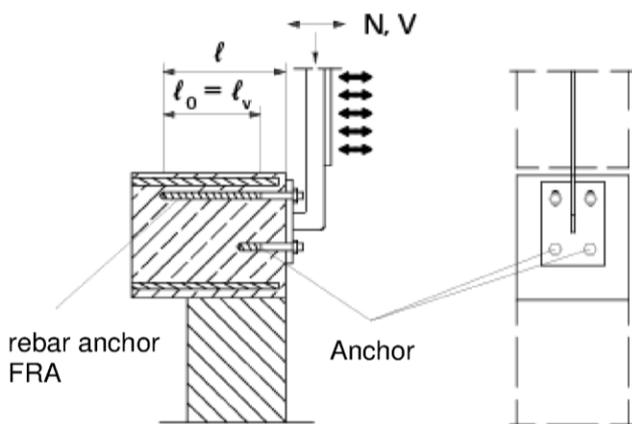

Figure A7: Lap of the anchoring of guardrail posts.
In the anchor plate, the drill holes for the rebar anchors FRA have to be designed as elongated holes with axial direction to the shear force.

Figure A8: Lap of the anchoring of cantilevered building components.
In the anchor plate, the drill holes for the rebar anchors FRA have to be designed as elongated holes with axial direction to the shear load.

The required transverse reinforcement acc. to EN 1992-1-1:2004+AC:2010 is not shown in the figures. **The rebar anchor FRA may be only used for axial tensile force.** The tensile force must be transferred by lap to the existing reinforcement of the building. The transfer of the shear force has to be ensured by suitable measure, e.g. by means of shear force or anchors with European Technical Approval/Assessment (ETA)

Rebar connection with Upat injection mortar UPM 55

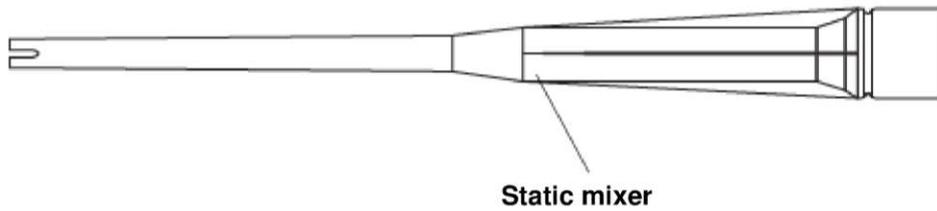

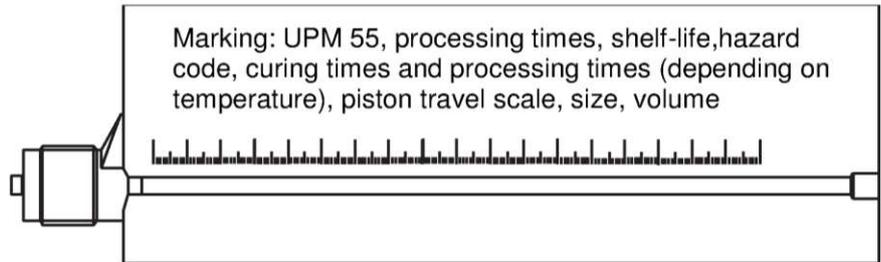

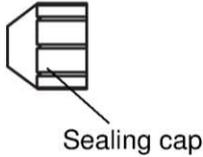

Product description
Properties and materials of rebar anchors FRA

Annex A 5

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads

Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2000
- Strength classes C12/15 to C50/60 according to EN 206-1:2000
- Maximum chloride concrete of 0,40% (CL 0.40) related to the cement content according to EN 206-1:2000
- Non-carbonated concrete

Note: In case of a carbonated surface of the existing concrete structure the carbonated layer shall be removed in the area of the post-installed rebar connection with a diameter of $\phi + 60$ mm prior to the installation of the new rebar. The depth of concrete to be removed shall correspond to at least the minimum concrete cover in accordance with EN 1992-1-1:2004+AC:2010. The foregoing may be neglected if building components are new and not carbonated and if building components are in dry conditions

Temperature Range:

- - 40°C to +80°C (max. short term temperature +80°C and max long term temperature +50°C)

Use conditions (Environmental conditions) for rebar anchors FRA:

- Structures subject to dry internal conditions (rebar anchors FRA and FRA C)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (rebar anchors FRA and FRA C)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (rebar anchors FRA C)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the forces to be transmitted
- Design according to EN 1992-1-1:2004+AC:2010 and Annex B 2 and B 3
- The actual position of the reinforcement in the existing structure shall be determined on the basis of the construction documentation and taken into account when designing

Installation:

- Dry or wet concrete
- It must not be installed in flooded holes
- Overhead installation allowed
- Hole drilling by hammer drill, compressed air drill or diamond drill mode
- The installation of post-installed rebar respectively rebar anchor FRA shall be done only by suitable trained installer and under Supervision on site; the conditions under which an installer may be considered as suitable trained and the conditions for Supervision on site are up to the Member States in which the installation is done
- Check the position of the existing rebars (if the position of existing rebars is not known, it shall be determined using a rebar detector suitable for this purpose as well as on the basis of the construction documentation and then marked on the building component for the overlap joint)

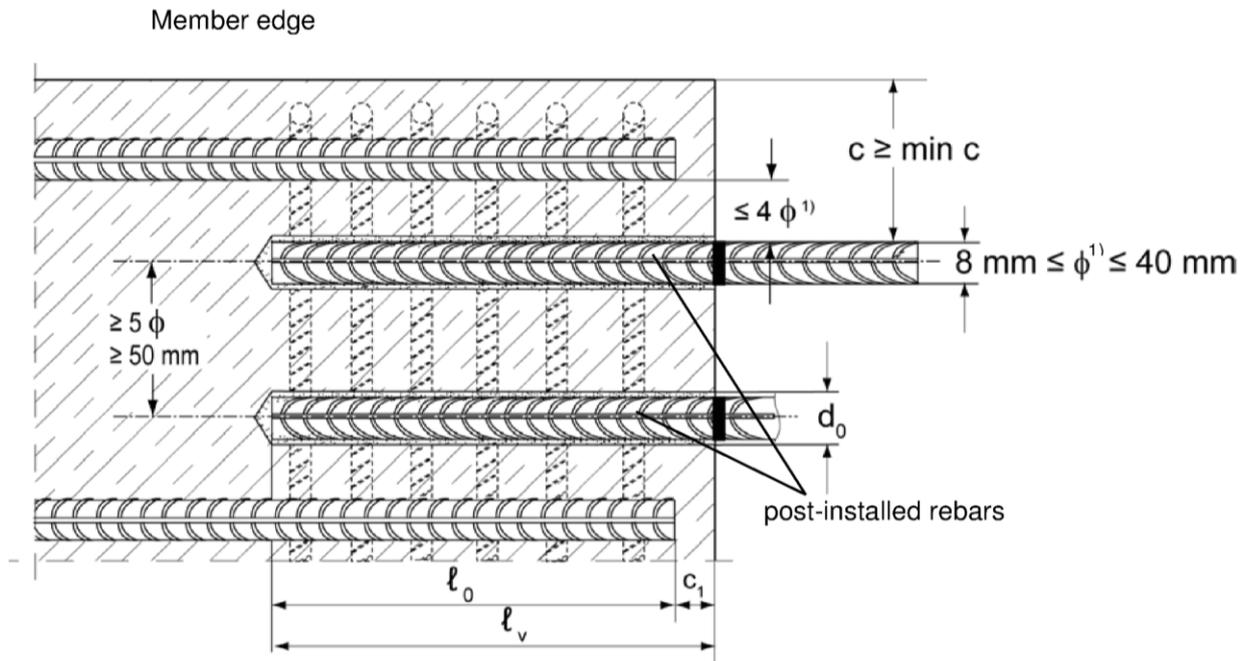

Rebar connection with Upat injection mortar UPM 55

Intended use
Specifications

Annex B 1

Figure B1: General construction rules for post-installed rebars

- Only tension forces in the axis of the rebar may be transmitted
- The transfer of shear forces between new concrete and existing structure shall be designed additionally according to EN 1992-1-1:2004+AC:2010
- The joints for concreting must be roughened to at least such an extent that aggregate protrude

¹) If the clear distance between lapped bars exceeds 4ϕ then the lap length shall be increased by the difference between the clear bar distance and 4ϕ

- c concrete cover of post-installed rebar
- c_1 concrete cover at end-face of existing rebar
- min c minimum concrete cover according to Table B1 and to EN 1992-1-1:2004+AC:2010, Section 4.4.1.2
- ϕ diameter of post-installed rebar
- ℓ_0 lap length, according to EN 1992-1-1:2004+AC:2010, Section 8.7.3
- ℓ_v effective embedment depth, $\geq \ell_0 + c_1$
- d_0 nominal drill bit diameter, see Annex B 5

Rebar connection with Upat injection mortar UPM 55

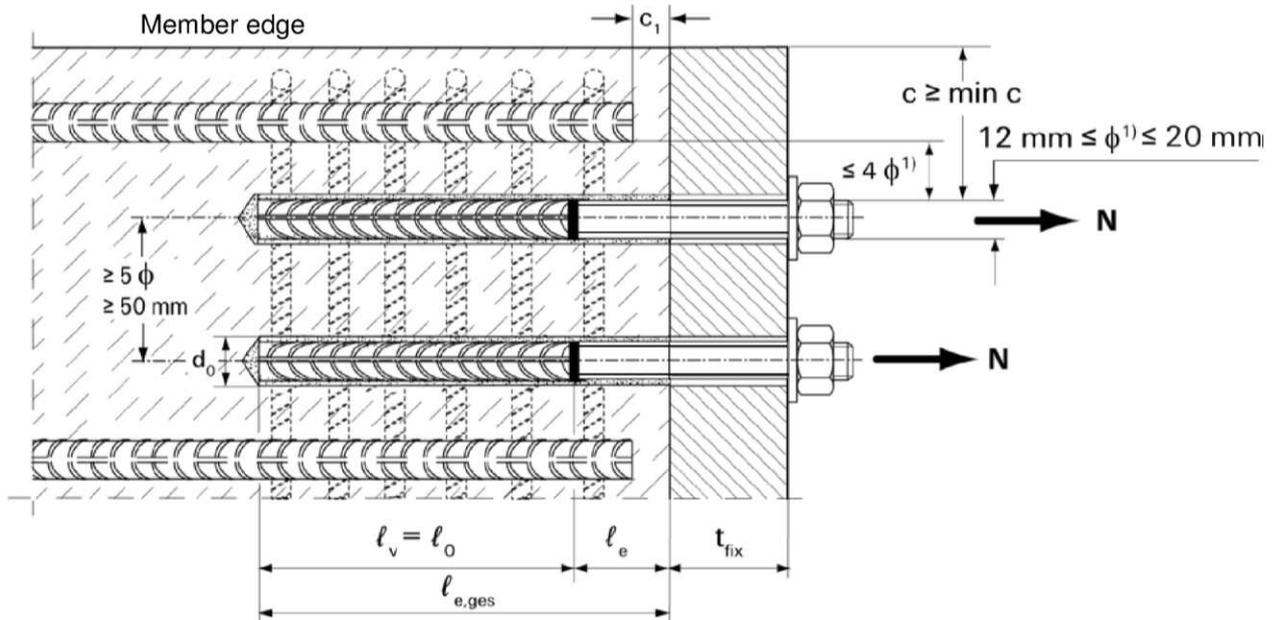

Intended use

General construction rules for post-installed rebars

Annex B 2

Figure B2: General construction rules for post-installed rebar anchors FRA

- Only tension forces in the axis of the FRA may be transmitted
- The tension force must be transferred via an overlap joint to the reinforcement in the building part.
- The transmission of the shear load shall be ensured by appropriate additional measures, e.g. by shear lugs or by anchors with an European Technical Assessment (ETA).
- In the anchor plate, the holes for the tension anchor shall be executed as elongated holes with the axis in the direction of the shear force.

¹⁾ If the clear distance between lapped bars exceeds 4ϕ then the lap length shall be increased by the difference between the clear bar distance and 4ϕ

- c concrete cover of post-installed FRA
- c_1 concrete cover at end-face of existing rebar
- min c minimum concrete cover according to Table B1 and to EN 1992-1-1:2004+AC:2010, Section 4.4.1.2
- ϕ nominal diameter of the bar
- l_0 lap length, according to EN 1992-1-1:2004+AC:2010, Section 8.7.3
- $l_{e,ges}$ overall embedment depth, $\geq l_v + l_e$
- d_0 nominal drill bit diameter, see Annex B 5
- l_e length of the bonded in threaded part
- t_{fix} thickness of the fixture
- l_v effective embedment depth

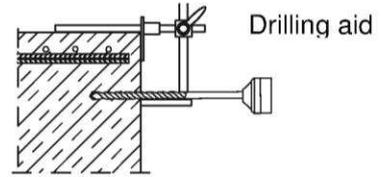

Rebar connection with Upat injection mortar UPM 55

Intended use

General construction rules for post-installed rebar anchors FRA

Annex B 3

Table B1:
Minimum concrete cover c^1 depending of the drilling method and the drilling tolerance

Drilling method	Nominal diameter of the bar ϕ [mm]	Minimum concrete cover min c	
		Without drilling aid [mm]	With drilling aid [mm]
Hammer drilling	≤ 20	30 mm + 0,06 l_v	30 mm + 0,02 $l_v \geq 2 \phi$
	≥ 22	40 mm + 0,06 l_v	40 mm + 0,02 $l_v \geq 2 \phi$
Pneumatic drilling	≤ 20	50 mm + 0,08 l_v	50 mm + 0,02 l_v
	≥ 22	60 mm + 0,08 l_v	60 mm + 0,02 l_v
Diamond drilling	≤ 20	30 mm + 0,06 l_v	30 mm + 0,02 $l_v \geq 2 \phi$
	≥ 22	40 mm + 0,06 l_v	40 mm + 0,02 $l_v \geq 2 \phi$

¹⁾ See Annex B2, Figure B1 and Annex B3, Figure B2

Note: The minimum concrete cover as specified in EN 1992-1-1:2004+AC:2010 must be observed

Table B2:
Dispensers and cartridge sizes corresponding to maximum embedment depth $l_{v,max}$

Rebar / FRA	Manual dispenser	Accu and pneumatic dispenser (small)	Pneumatic dispenser (large)

							38			

¹⁾ Both drill bit diameters can be used

Rebar connection with Upat injection mortar UPM 55

Intended use

Installation tools for drilling and cleaning the bore hole and injection installation of the mortar

Annex B 5

Safety regulations

Review the Material Safety Data Sheet (SDS) before use for proper and safe handling!

Wear well-fitting protective goggles and protective gloves when working with mortar UPM 55

important: Observe the instructions for use provided with each cartridge.

1. Drill hole

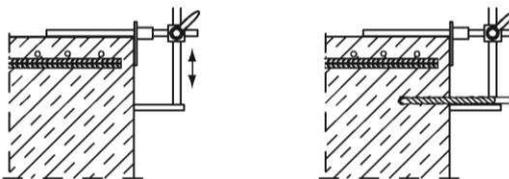

Note: Before drilling, remove carbonized concrete; clean contact areas (see Annex B 1)
In case of aborted drill hole the drill hole shall be filled with mortar.

Drill hole to the required embedment depth using a hammer-drill with carbide drill bit set in rotation hammer mode, a pneumatic drill or a diamond drill in drilling mode.
Drill bit sizes see Table B4.

Measure and control concrete cover c
 $c_{\text{drill}} = c + \phi / 2$
Drill parallel to surface edge and to existing rebar
Where applicable use drilling aid.

For holes $l_v > 20$ cm use drilling aid.
Three different options can be considered:

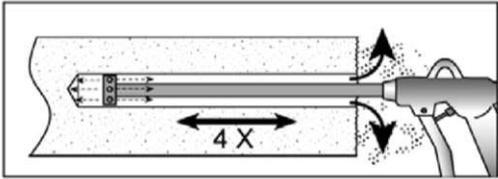

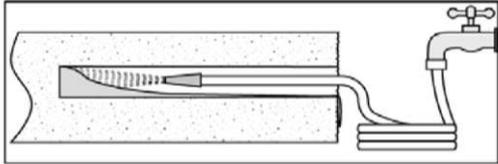

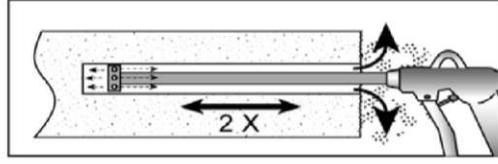

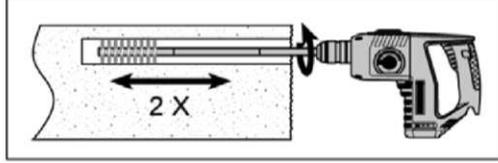

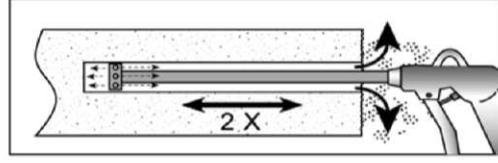

- A) drilling aid
- B) Slat or spirit level
- C) Visual check

Rebar connection with Upat injection mortar UPM 55

Intended use
Installation instruction part 1

Annex B 6

2. Cleaning the bore hole

<p>Hammer- and pneumatic drilling</p>	
	<p>Blowing four times from the back of the hole with oil-free compressed air (min. 6 bar) until return air stream is free of noticeable dust.</p>
<p>Diamond drilling</p>	
<p>Break away the drill core and remove it</p>	
	<p>Flush the bore hole until the water comes clear</p>
	<p>Blowing two times from the back of the hole with oil-free compressed air (min. 6 bar) until return air stream is free of noticeable dust.</p>
	<p>Fix an adequate steel brush with an extension into a drilling machine and brush the bore hole two times</p>
	<p>Blowing two times from the back of the hole with oil-free compressed air (min. 6 bar) until return air stream is free of noticeable dust.</p>

Rebar connection with Upat injection mortar UPM 55

Intended use
Installation instruction part 2

Annex B 7

3. Rebar preparation and cartridge preparation

	<p>Before use, make asure the rebar or the rebar anchor FRA is dry and free of oil or other residue. Mark the embedment depth l_v on the rebar (e.g. with tape) Insert rebar in borehole, to verify hole and setting depth l_v resp. $l_{e,ges}$</p>
<p>Injection system preparation</p>	
	<p>No. 1: Twist off the sealing cap</p>
	<p>No. 2: Twist on the static mixer (the spiral in the static mixer must be clearly visible).</p>
	<p>No. 3: Place the cartridge into a suitable dispenser.</p>
	<p>No. 4: Press approximate 10 cm of material out until the resin is evenly grey in colour. Don't use mortar that is not uniformly grey.</p>

4. Inject mortar into borehole

4.1 borehole depth ≤ 250 mm:

	<p>Inject the mortar from the back of the hole towards the front and slowly withdraw the mixing nozzle step by step after each trigger pull. Fill holes approximately 2/3 full, or as required to ensure that the annular gap between the rebar and the concrete is completely filled with adhesive over the embedment length.</p>
	<p>After injecting, depressurize the dispenser by pressing the release trigger. This will prevent further mortar discharge from the mixing nozzle.</p>

Rebar connection with Upat injection mortar UPM 55

Intended use
 Installation instruction part 3

Annex B 8

4.2 borehole depth > 250 mm:

	<p>Assemble mixing nozzle, extension tube and injection adapter (see Table B 4)</p>
 <p>Mortar level mark</p>	<p>Mark the required mortar level l_m and embedment depth l_v resp. $l_{e,ges}$ with tape or marker on the injection extension tube.</p> <p>a) Estimation:</p> $l_m = \frac{1}{3} * l_v \text{ resp. } l_m = \frac{1}{3} * l_{e,ges}$ <p>b) Precise formula for optimum mortar volume:</p> $l_m = l_v \text{ resp. } l_{e,ges} \left((1,2 * \frac{d_s^2}{d_0^2} - 0,2) \right) [\text{mm}]$
 <p>Mortar level mark</p>	<p>Insert injection adapter to back of the hole. Begin injection allowing the pressure of the injected adhesive mortar to push the injection adapter towards the front of the hole. Fill holes approximately 2/3 full, or as required to ensure that the annular gap between the rebar and the concrete is completely filled with adhesive over the embedment length. When using an injection adapter continue injection until the mortar level mark l_m becomes visible. Maximum embedment depth see Table B 2</p>
	<p>After injecting, depressurize the dispenser by pressing the release trigger. This will prevent further mortar discharge from the mixing nozzle.</p>

Rebar connection with Upat injection mortar UPM 55

Intended use
Installation instruction part 4

Annex B 9

4.3 Insert rebar

	<p>For each installation insert the rebar / rebar anchor FRA slowly twisted into the borehole until the embedment mark is at the concrete surface level.</p>
	<p>For overhead installation support the rebar / rebar anchor FRA and secure it from falling till mortar started to harden, e.g. using wedges.</p>
	<p>After installing the rebar or FRA the annular gap must be completely filled with mortar.</p> <p>Proper installation</p> <ul style="list-style-type: none"> • Desired anchoring embedment is reached ℓ_v: embedment mark at concrete surface. • Excess mortar flows out of the borehole after the rebar has been fully inserted until the embedment mark.
	<p>Observe the working time "t_{work}" (see Table B3), which varies according to temperature of base material. Minor adjustments to the rebar / rebar anchor FRA position may be performed during the working time</p> <p>Full load may be applied only after the curing time "t_{cure}" has elapsed (see Table B 3)</p>

Rebar connection with Upat injection mortar UPM 55

Intended use
Installation instruction part 5

Annex B 10

Minimum anchorage length and minimum lap length

The minimum anchorage length $\ell_{b,min}$ and the minimum lap length $\ell_{o,min}$ according to EN 1992-1-1:2004+AC:2010 ($\ell_{b,min}$ acc. to Eq. 8.6 and Eq. 8.7 and $\ell_{o,min}$ acc. to Eq. 8.11) shall be multiply by a amplification factor α_{lb} according to Table C1.

Table C1: Amplification factor α_{lb} related to concrete class and drilling method

Concrete class	Drilling method	Amplification factor α_{lb}
C12/15 to C50/60	Hammer drilling and pneumatic drilling	1,0
C12/15 to C50/60	Diamond drilling	1,3

Table C2: Reduction factor k_b for all drilling methods

Hammer drill or pneumatic drill									
Rebar / FRA ϕ [mm]	Reduction factor k_b								
	Concrete classe								
	C12/15	C16/20	C20/25	C25/30	C30/37	C35/45	C40/50	C45/55	C50/60

Table C3: Design values of the ultimate bond resistance $f_{bd,PIR}$ in N/mm² for all drilling methods and for good bond conditions

$$f_{bd,PIR} = k_b \cdot f_{bd}$$

f_{bd} : Design value of the ultimate bond stress in N/mm² considering the concrete classes and the rebar diameter according to EN 1992-1-1: 2004+AC:2010 (for all other bond conditions multiply the values by 0,7)

k_b : Reduction factor according to Table C2

Hammer drill or pneumatic drill									
Rebar / FRA ϕ [mm]	Bond resistance $f_{bd,PIR}$ [N/mm ²]								
	Concrete class								
	C12/15	C16/20	C20/25	C25/30	C30/37	C35/45	C40/50	C45/55	C50/60
8 to 25	1,6	2,0	2,3	2,7	3,0	3,4	3,7	4,0	4,3
26 to 40									4,0
Diamond drill									
Rebar / FRA ϕ [mm]	Bond resistance $f_{bd,PIR}$ [N/mm ²]								
	Concrete class								
	C12/15	C16/20	C20/25	C25/30	C30/37	C35/45	C40/50	C45/55	C50/60
8 to 12	1,6	2,0	2,3	2,7	3,0	3,4	3,7	4,0	4,3
14 to 25								3,7	
26 to 40								3,0	

Rebar connection with Upat injection mortar UPM 55

Annex C 1

Performances

Amplification factor α_{lb} , Reduction factor k_b
Design values of ultimate bond resistance $f_{bd,PIR}$
