7. Deklarovaná vlastnost/Deklarované vlastnosti:

## Mechanická odolnost a stabilita (BWR 1)

| Základní vlastnosti                                              | Výkon                                     |
|------------------------------------------------------------------|-------------------------------------------|
| Charakteristická odolnost pro statické a kvazi-statické zatížení | Viz. doplněk, obzvláště Přílohy C 1 - C 3 |
| Charakteristická únosnost při seismické kategorii C1 a C2        | Viz. doplněk, obzvláště Přílohy C 6 - C 7 |
| Posuny při statickém a kvazi-statickém zatížení                  | Viz. doplněk, obzvláště Příloha C 8       |
| Posuny při seismickém zatížení                                   | Viz. doplněk, obzvláště Příloha C 9       |

## Bezpečnost v případě požáru (BWR 2)

| Základní vlastnosti                        | Výkon                                     |
|--------------------------------------------|-------------------------------------------|
| Odolnost proti ohni                        | Kotvení splňuje požadavky Třídy A 1       |
| Charakteristická únosnost v případě požáru | Viz. doplněk, obzvláště Přílohy C 4 + C 5 |

8. Příslušná technická dokumentace a/nebo specifická technická dokumentace: ---

Vlastnosti výše uvedeného výrobku jsou ve shodě se souborem deklarovaných vlastností. Toto prohlášení o vlastnostech se v souladu s nařízením (EU) č. 305/2011 vydává na výhradní odpovědnost výrobce uvedeného výše.

Podepsáno za výrobce a jeho jménem:

**Specific Part****1 Technical description of the product**

The fischer Bolt Anchor FAZ II is an anchor made of galvanised steel (FAZ II) or made of stainless steel (FAZ II A4) or high corrosion resistant steel (FAZ II C) which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

**2 Specification of the intended use in accordance with the applicable European Assessment Document**

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

**3 Performance of the product and references to the methods used for its assessment****3.1 Mechanical resistance and stability (BWR 1)**

| Essential characteristic                                               | Performance          |
|------------------------------------------------------------------------|----------------------|
| Characteristic resistance for static and quasi static action           | See Annex C 1 to C 3 |
| Characteristic resistance for seismic performance categories C1 and C2 | See Annex C 6 to C 7 |
| Displacements under static and quasi static action                     | See Annex C 8        |
| Displacements under seismic action                                     | See Annex C 9        |

**3.2 Safety in case of fire (BWR 2)**

| Essential characteristic                      | Performance                                 |
|-----------------------------------------------|---------------------------------------------|
| Reaction to fire                              | Anchorage satisfy requirements for Class A1 |
| Characteristic resistance under fire exposure | See Annex C 4 and C 5                       |

**3.3 Safety in use (BWR 4)**

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Cone bolt manufactured by cold - forming:

Cone bolt manufactured by turning:

- ① Cone bolt (cold – formed or turned)
- ② Expansion sleeve
- ③ Hexagon nut
- ④ Washer

$h_{ef}$  = Effective anchorage depth  
 $t_{fix}$  = Thickness of fixture

fischer Bolt Anchor FAZ II, FAZ II A4, FAZ II C

<sup>1)</sup> FAZ II C: Only valid for cold-formed version (see A1)

<sup>2)</sup> Use restricted to anchoring of structural components which are statically indeterminate

#### Base materials:

- Reinforced and unreinforced normal weight concrete (cracked and uncracked) according to EN 206-1:2000
- Strength classes C20/25 to C50/60 according to EN 206-1:2000

#### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (FAZ II, FAZ II A4, FAZ II C)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (FAZ II A4, FAZ II C)
- Structures subject to external atmospheric exposure and permanently damp internal condition, if other particular aggressive conditions exist (FAZ II C)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

#### Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are to be designed in accordance with:
  - ETAG 001, Annex C, design method A, Edition August 2010 or
  - CEN/TS 1992-4:2009, design method A
- Anchorages under seismic actions (cracked concrete) are to be designed in accordance with:
  - EOTA Technical Report TR 045, Edition February 2013
  - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure
  - Fastenings in stand-off installation or with a grout layer under seismic action are not allowed
- Anchorages under fire exposure are to be designed in accordance with:
  - EOTA Technical Report TR 020, Edition May 2004 or
  - CEN/TS 1992-4:2009, Annex D
  - It must be ensured that local spalling of the concrete cover does not occur

| Type of anchor / size                                   |                                      | FAZ II, FAZ II A4, FAZ II C |       |      |      |       |       |
|---------------------------------------------------------|--------------------------------------|-----------------------------|-------|------|------|-------|-------|
|                                                         |                                      | M8                          | M10   | M12  | M16  | M20   | M24   |
| Nominal drill hole diameter                             | $d_0 = [\text{mm}]$                  | 8                           | 10    | 12   | 16   | 20    | 24    |
| Cutting diameter of drill bit                           | $d_{\text{cut}} \leq [\text{mm}]$    | 8,45                        | 10,45 | 12,5 | 16,5 | 20,55 | 24,55 |
| Standard anchorage depth                                | $h_{\text{ef,sta}} \geq [\text{mm}]$ | 45                          | 60    | 70   | 85   | 100   | 125   |
| Depth of drill hole in concrete for $h_{\text{ef,sta}}$ | $h_{1,\text{sta}} \geq [\text{mm}]$  | 55                          | 75    | 90   | 110  | 125   | 155   |
| Reduced anchorage depth                                 | $h_{\text{ef,red}} \geq [\text{mm}]$ | 35 <sup>2)</sup>            | 40    | 50   | 65   | -     | -     |
| Depth of drill hole in concrete for $h_{\text{ef,red}}$ | $h_{1,\text{red}} \geq [\text{mm}]$  | 45 <sup>2)</sup>            | 55    | 70   | 90   | -     | -     |
| Diameter of clearance hole in the fixture <sup>1)</sup> | $d_f \leq [\text{mm}]$               | 9                           | 12    | 14   | 18   | 22    | 26    |
| Required torque moment                                  | $T_{\text{inst}} = [\text{Nm}]$      | 20                          | 45    | 60   | 110  | 200   | 270   |

<sup>1)</sup> If a larger diameter of the clearance hole in the fixture is used, see Chapter 4.2.2.1 of ETAG 001, Annex C

<sup>2)</sup> Use restricted to anchoring of structural components which are statically indeterminate

$h_{\text{ef}}$  = Effective anchorage depth  
 $t_{\text{fix}}$  = Thickness of fixture  
 $h_1$  = Drill hole depth  
 $h_2$  = Min.drill hole depth for push-through installation  
 $h_{\text{min}}$  = Thickness of concrete member  
 $T_{\text{inst}}$  = Required torque moment

### Installation instructions

The fitness for use of the anchor can only be assumed if the anchor is installed as follows:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Use of the anchor only as supplied by the manufacturer without exchanging the components of the anchor
- Checking before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply
- Check of concrete being well compacted, e.g. without significant voids
- Edge distances and spacing not less than the specified values without minus tolerances
- Drill hole perpendicular to concrete surface, positioning without damaging the reinforcement. In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application

**Concrete pryout failure:** In Equation (5.6) of ETAG 001, Annex C, 5.2.3.3 the  $k_{(3)}$ -factor of Table C3 and the relevant values of  $N_{0Rk,c,fi}$  of Table C4 have to be considered.

**Concrete edge failure:** The characteristic resistance  $V_{Rk,c,fi}^0$  in concrete C20/25 to C50/60 is determined by:  $V_{Rk,c,fi}^0 = 0,25 \times V_{Rk,c}^0$  (R30, R60, R90),  $V_{Rk,c,fi}^0 = 0,20 \times V_{Rk,c}^0$  (R120) with  $V_{Rk,c}^0$  as initial value of the characteristic resistance in cracked concrete C20/25 under normal temperature according to ETAG 001, Annex C, 5.2.3.4.
