PROHLÁŠENÍ O VLASTNOSTECH

DoP 0273

pro injektážní systém fischer FIS GREEN (vlepovaná ocelová kotva pro zdivo) CS

1. Jedinečný identifikační kód typu výrobku: **DoP 0273**

2. Zamýšlené/zamýšlená použití: **Dodatečné kotvení v cihelném zdivu, viz. dodatek, obzvláště Přílohy B1- B9.**

3. Výrobce: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Německo**

4. Zplnomocněný zástupce: **–**

5. Systém/systémy POSV: **1**

6. Evropský dokument pro posuzování: **ETAG 029, April 2013, použito jako EAD**
   Evropské technické posouzení: **ETA-14/0471; 2015-02-03**
   Subjekt pro technické posuzování: **DIBt- Deutsches Institut für Bautechnik**
   Oznámený subjekt/oznámené subjekty: **2873 TU Darmstadt**

7. Deklarovaná vlastnost/Deklarované vlastnosti:
   Mechanická odolnost a stabilita (BWR 1)
   Charakteristické hodnoty únosnosti:
   Redukční faktor: Příloze C4
   Charakteristická únosnost jedné kotvy při zatížení tahem: Přílohy C1,C2,C3

   Charakteristická únosnost skupiny kotev při zatížení tahem: Příloze C5

   Charakteristická únosnost jedné kotvy při zatížení smykem: Přílohy C1,C2,C3

   Charakteristická únosnost skupiny kotev při zatížení smykem bez a s vlivem okraje: Příloze C5

   Charakteristická okrajová a osová vzdálenost: Příloze C5

   Minimální okrajová a osová vzdálenost: Příloze C5

   Skupinový faktor při zatížení tahem a smykem: NPD

   Minimální tloušťka podkladu: Příloze C5

   Trvanlivost: Příloze A4
   posuny: Příloze C4

   Bezpečnost v případě požáru (BWR 2)
   Odolnost proti ohni: Třídy (A1)

   Hygiena, zdraví a životní prostředí (BWR 3)
   Obsah, emise a / nebo uvolňování nebezpečných látek: NPD

8. Příslušná technická dokumentace a/nebo specifická technická dokumentace: –

Vlastnosti výše uvedeného výrobku jsou ve shodě se souborem deklarovaných vlastností. Toto prohlášení o vlastnostech se v souladu s nařízením (EU) č. 305/2011 vydává na výhradní odpovědnost výrobce uvedeného výše.

Podepsáno za výrobce a jeho jménem:

Dr. Oliver Geibig, Výkonný ředitel pro obchodní jednotky a inženýrství

Jürgen Grün, Výkonný ředitel pro chemii a kvalitu

Tumlingen, 2021-01-20

Toto PoV bylo připraveno v různých jazykových mutacích. V případě rozporu vždy rozhoduje interpretace verze v anglickém jazyce.

Příloha obsahuje nepovinné a doplňkové informace v anglickém jazyce nad rámec zákonných požadavků.

Specific Part

1 Technical description of the product

The fischer injectionsystem FIS GREEN for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with fischer injection mortar, a perforated sieve sleeve and an anchor rod with hexagon nut and washer or an internal threaded rod in the range of M6 to M16. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for tension and shear loads	See Annex C 1 – C 3
Characteristic resistance for bending moments	See Annex C 4
Displacements under shear and tension loads	See Annex C 4
Reduction Factor for job site tests (β-Factor)	See Annex C 4
Edge distances and spacing	See Annex C 5

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance determined (NPD)

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

3.5 Protection against noise (BWR 5)

Not applicable.

3.6 Energy economy and heat retention (BWR 6)

Not applicable.

3.7 Sustainable use of natural resources (BWR 7)

The sustainable use of natural resources was not investigated.

3.8 General aspects

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 17 February 1997 (97/177/EC) (OJ L 073 of 14.03.97 p. 24-25), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Metal injection anchors for use in masonry	For fixing and/or supporting to masonry, structural elements (which contributes to the stability of the works) or heavy units	—	1

6	Perforated sleeve FIS H K	PP / PE		

Specifications of intended use

Anchorages subject to:

- Static and quasi-static loads

Base materials:

- Solid brick masonry (Use category b) and autoclaved aerated masonry (Use category d), acc. to Annex B 7.
  Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow brick masonry (use category c), according to Annex B 7.
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010.
- For other bricks in solid masonry and in hollow or perforated masonry, the characteristic resistance of the anchor may be determined by job site tests according to ETAG 029, Annex B under consideration of the β-factor according to Annex C 4, Table C4.

Temperature Range:

- From - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)

Use conditions (Environmental conditions):

- Dry and wet structure (regarding injection mortar).
- Structures subject to dry internal conditions
  (zinc coated steel, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure including industrial and marine environment
  (stainless steel or high corrosion resistant steel).
- Structures subject to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions (high corrosion resistant steel)
  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- The anchorages have to be designed in accordance with the ETAG 029, Annex C, Design method A under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings have to be prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.

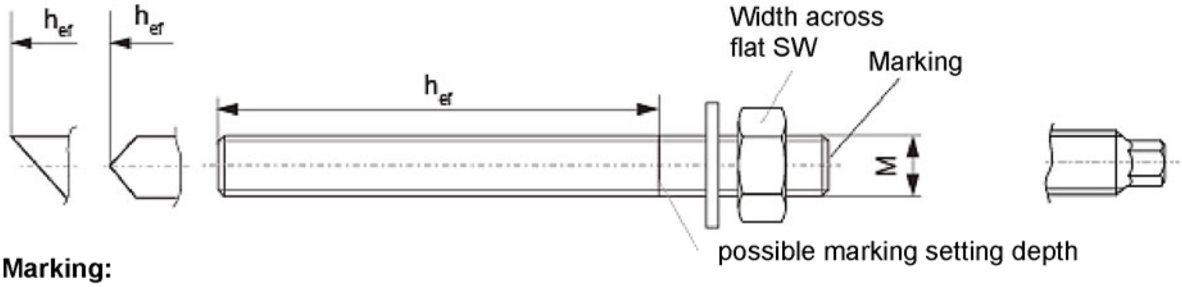
Installation:

- Dry or wet structures (use category d/d and use category w/w).
- Hole drilling by hammer drill mode.
- In case of aborted hole: The hole shall be filled with mortar
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Fastening screws or threaded rods (including nut and washer) must comply with the appropriate material and property class of the fischer internal threaded anchor FIS E
- min. curing time see table B3
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

  material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A4, Table A1

  conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored.

  marking of the threaded rod with the envisage embedment depth. This may be done by the manufacturer of the rod or by a person on job site.



Marking:
Property class 8.8 or high corrosion-resistant steel C, property class 80: •
Stainless steel A4, property class 50 and high corrosion-resistant steel C, property class 50: ••

Table B1.1: Installation parameters (threaded rod without perforated sleeve)

Table B3: Maximum processing time of the mortar and minimum curing time

(During the curing time of the mortar the masonry temperature may not fall below the listed minimum temperature).

Temperature at anchoring base [°C]	Minimum curing time 1) t_{cure} [minutes]
>±0 to +5	6 hours
>+5 to +10	4 hours
>+10 to +20	90
>+20 to +30	60
>+30 to +40	30

System-temperature (mortar) [°C]	Maximum processing time t_{work} [minutes]
+5	13
+10	9
+20	5
+30	4
+40	2

1) For wet masonry the curing time must be doubled.

Installation instructions

Preparing the cartridge

1		Remove the sealing cap.		Screw on the static mixer (the spiral in the static mixer must be clearly visible).
2		Place the cartridge into the dispenser.		Press approx. 10 cm of material out until the resin is well mixed. Mortar which is not grey in colour will not cure and must be disposed off.

Installation in solid brick and aerated concrete (without perforated sleeve)

3		Drill the hole. Depth of drill hole h_0 and drill hole diameter d_0 see Table **B1.1** or **B1.2**		
4	 			Blow out the drill hole twice. Brush twice and blow out twice again.
5		Fill approx. 2/3 of the drill hole with mortar beginning from the bottom of the hole[1]. Avoid bubbles.		For push through installation (not FIS E) fill the annular gap also with mortar.
6		Only use clean and oil-free elements. Mark the threaded rod for setting depth. Insert the threaded rod or internal threaded anchor FIS E by hand using light turning motions. When reaching the setting depth mark, excess mortar must exit the drill hole.		
7		Do not touch. Minimum curing time see Table **B3**		Mounting the fixture. $T_{inst,max}$ see Table **B1.1 or B1.2**

[1] For the exact quantity of mortar see manufacturer`s spezification.

Installation in perforated or solid brick with perforated sleeve (pre-positioned anchorage)

3		Drill the hole (hammer drill). Depth of drill hole h_0 and drill hole diameter d_0 see Table **B1.3**		When installing the perforated sleeve in solid bricks or solid areas of hollow bricks, also clean the hole by blowing and brushing.
4		Insert the perforated sleeve flush with the surface of the masonry or plaster.		Fill the perforated sleeve completely with mortar beginning from the bottom of the hole.[1]
5				Insert the anchor rod or internal threaded anchor FIS E by hand using light turning motions till reaching the setting depth mark (= length of perforated sleeve)
6		Do not touch. Minimum curing time see Table **B3**		Tighten the hexagon nut. $T_{inst,max}$ see Table **B1.3**

[1] For the exact quantity of mortar see manufacturer`s spezification.

Installation in perforated or solid brick with perforated sleeve (push-through anchorage)

3		Push the movable stop up to the correct thickness of fixture and cut the overlap		Drill the hole through the fixture. Depth of drill hole (h_0+t_{fix})and drill hole diameter see Table **B1.4**
4		Insert the perforated sleeve flush with the surface of the fixture.		Fill the sleeve with mortar beginning from the bottom of the drill hole.[1] For deep drill holes use an extension tube.
5		Insert the anchor rod by hand using light turning motions till reaching the setting depth mark (= length of perforated sleeve).		
6		Do not touch. Minimum curing time see Table **B3**		Tighten the hexagon nut. $T_{inst,max}$ see Table **B1.4**

[1] For the exact quantity of mortar see manufacturer`s spezification.
