YDEEVNEDEKLARATION

DoP 0337

til fischer anker FAZ II Plus dynamic (Eftermonteret befæstelse i revnet eller ikke-revnet beton) DA

1. Varetypens unikke identifikationskode: **DoP 0337**

2. Anvendelsesformål: **Eftermonteret fastgørelseselementer til brug i beton under cyklisk slidbelastning, se appendiks, specifikt Bilage B1- B4.**

3. Fabrikant: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Tyskland**

4. Bemyndiget repræsentant: **–**

5. System(er) til vurdering og kontrol af konstansen af ydeevnen: **1**

6. Europæisk vurderingsdokument: **EAD 330250-00-0601, Edition 06/2021**
   Europæisk Teknisk Vurdering **ETA-20/0897; 2023-05-22**
   Teknisk vurderingsorgan: **DIBt- Deutsches Institut für Bautechnik**
   Notificeret organ(er) **2873 TU Darmstadt**

7. Deklareret ydeevne(r):
   EAD 330250-00-0601; Table 2.1
   Mekanisk modstand og stabilitet (BWR 1)
   Karakteristisk modstand for træklast (statisk og quasi-statisk belastning) Metode A:
   - Modstand overfor stålsvig: Bilag C1
   - Modstand overfor svigt ved udtrækning: Bilag C1
   - Modstand overfor svigt af beton-kegle: Bilag C1
   - Robusthed: Bilag C1
   - Min. kant og indbyrdes afstand: Bilag C5, C6
   - Kantafstand til forhindring af flækning under belastning: Bilag C1

   Karakteristisk modstand for tværlast (statisk og quasi-statisk belastning), Methode A:
   - Modstand overfor stålsvigt (tværlast): Bilag C2
   - Modstand overfor svigt ved udtrækning: Bilag C2

   Forskydninger:
   - Forskydninger under statisk og quasi-statisk belastning: Bilag C9

   Karakteristisk modstand og Forskydninger for seismiske ydelseskategorier C1 og C2:
   - Modstand overfor spændingslast, kategori C1: Bilag C7
   - Modstand overfor spændingslast, forskydninger, kategori C2: Bilag C8, C9
   - Modstand overfor tværlast, kategori C1: Bilag C7
   - Modstand overfor tværlast, forskydninger, kategori C2: Bilag C8, C9
   - Faktor ringhul: Bilag C7, C8

   Brandbeskyttelse (BWR 2)
   - Brandegenskaber: Klasse (A1)

   Brandbeskyttelse:
   - Brandbeskyttelse overfor stålsvigt (spændingslast): Bilag C3
   - Brandbeskyttelse overfor svigt ved udtrækning (spændingslast): Bilag C3
   - Brandbeskyttelse overfor stålsvigt (tværlast): Bilag C3, C4

   Holdbarhed:
   - Holdbarhed: Bilag A3, B1

   Vurderingsmulighed C: Lineær funktion
   Mekanisk modstand og stabilitet (BWR 1)
   - Karakteristisk modstand overfor stålsvigt ved træklast: Bilag C10, C11
   - Karakteristisk modstand overfor svigt af betonkegle, svigt ved udtrækning, samt sprængning og flækken ved træklast: Bilag C10, C11
   - Karakteristisk modstand overfor svigt ved udtrækning eller kombineret svigt af betonkegle / svigt ved udtrækning ved træklast: Bilag C10, C11
   - Karakteristisk modstand overfor stålsvigt ved tværlast: Bilag C10, C11
   - Karakteristisk modstand overfor svigt af betonkant ved tværlast: Bilag C10, C11
   - Karakteristisk modstand overfor svigt ved udtrækning (beton) ved tværlast: Bilag C10, C11
   - Karakteristisk modstand overfor stålsvigt ved træk- og tværlast: Bilag C10, C11
   - Lastoverførsel ved træk- og tværlast: Bilag C10, C11

8. Relevant teknisk dokumentation og/eller specifik teknisk dokumentation: -

Ydeevnen for den vare, der er anført ovenfor, er i overensstemmelse med den deklarerede ydeevne. Denne ydeevnedeklaration er udarbejdet i overensstemmelse med forordning (EU) nr. 305/2011 på eneansvar af den fabrikant, der er anført ovenfor.

Underskrevet for fabrikanten og på dennes vegne af:

Dr. Oliver Geibig, Administrerende direktør Forretningsenheder og ingeniørarbejde

Jürgen Grün, Administrerende direktør Kemi & Kvalitet

Tumlingen, 2023-06-05

Denne DoP er tilgængelig i forskellige sprogversioner. I tilfælde af fortolkningsmæssig uoverensstemmelse, henvises der til den engelske version, som altid er gældende.

Appendikset indeholder frivillige og udvidede informationer på engelsk. Disse overgår de lokale (sprogneutrale) retslige krav.

Specific Part

1 Technical description of the product

The fischer Bolt Anchor FAZ II Plus dynamic is an anchor made of galvanised steel (FAZ II Plus dynamic) or stainless steel (FAZ II Plus dynamic R) which is placed into a drilled hole and anchored by torque-controlled expansion.

The fastener consists of an fischer Bolt Anchor FAZ II Plus with cone bolt, expansion clip, washer and hexagon nut and a Dynamic set with filling conical washer, spherical washer and lock nut.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic (static, quasi-static loading and seismic)	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annexes C 1, C 5, C 6
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 2
Displacements (static and quasi-static loading)	See Annex C 9
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annexes C 7 to C 9

Essential characteristic (fatigue loading, Linearized function - Assessment method C)	Performance
Characteristic fatigue resistance under cyclic tension loading	
Characteristic steel fatigue resistance $\Delta N_{Rk,s,0,n}$ (n = 1 to n = ∞)	See Annexes C 10 and C 11
Characteristic concrete cone, pull-out, splitting and blow out fatigue resistance $\Delta N_{Rk,c,0,n}$ $\Delta N_{Rk,sp,0,n}$ $\Delta N_{Rk,cb,0,n}$ (n = 1 to n = ∞)	
Characteristic pull- out fatigue resistance $\Delta N_{Rk,p,0,n}$ (n = 1 to n = ∞)	

Essential characteristic (fatigue loading, Linearized function - Assessment method C)	**Performance**
Characteristic fatigue resistance under cyclic shear loading	
Characteristic steel fatigue resistance $\Delta V_{Rk,s,0,n}$ (n = 1 to n = ∞)	See Annexes C 10 and C 11
Characteristic concrete edge fatigue resistance $V_{Rk,c,0,n}$ (n = 1 to n = ∞)	
Characteristic concrete pry out fatigue resistance $\Delta V_{Rk,cp,0,n}$ (n = 1 to n = ∞)	
Characteristic fatigue resistance under cyclic combined tension and shear loading	
Characteristic steel fatigue resistance a_s (n = 1 to n = ∞)	See Annexes C 10 and C 11
Load transfer factor for cyclic tension and shear loading	
Load transfer factor ψ_{FN}, ψ_{FV}	See Annexes C 10 and C 11

3.2 Safety in case of fire (BWR 2)

Essential characteristic	**Performance**
Reaction to fire	Class A1
Resistance to fire	See Annex C 3 and C 4

3.3 Aspects of durability

Essential characteristic	**Performance**
Durability	See Annex B 1

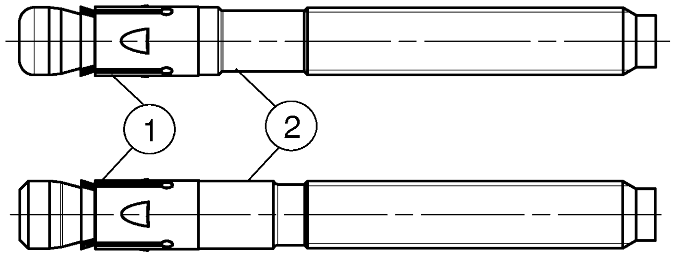
4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

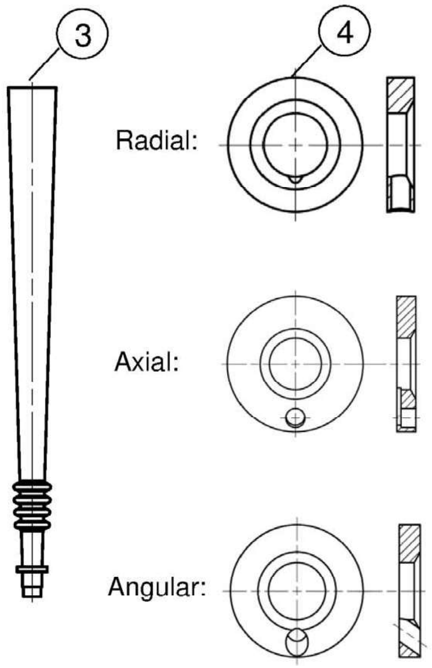
In accordance with European Assessment Document No. 330250-00-0601, the applicable European legal act is: [96/582/EC].

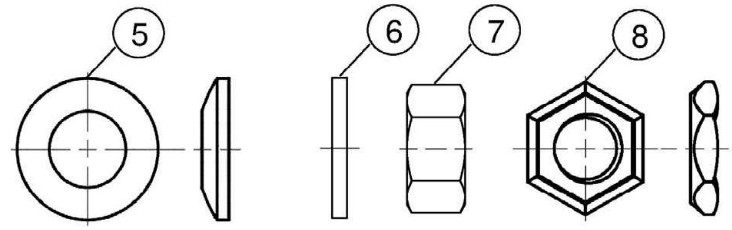
The system to be applied is: 1

Cone bolt manufactured by cold - forming:

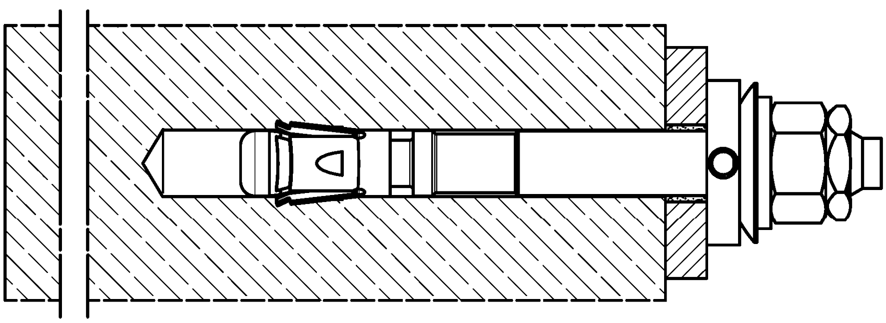
Cone bolt manufactured by turning:





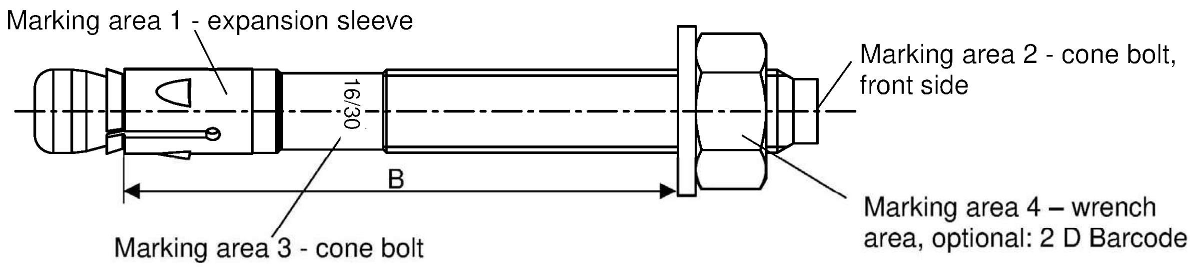


①	Expansion sleeve
②	Cone bolt (cold – formed or turned)
③	Filling adapter
④	Filling conical washer (various versions)
⑤	Spherical washer
⑥	Washer
⑦	Hexagon nut
⑧	Lock nut



(Fig. not to scale)

Product marking and letter-code:



Product marking, example: FAZ II + 16/30 R

Brand | type of fastener placed at marking area 1 or 3

Thread size / max. thickness of the fixture (t_{fix}) identification R placed at marking area 1 or 3

FAZ II Plus dynamic: carbon steel, galvanised
FAZ II Plus dynamic R: stainless steel

Table A2.1: Letter - code at marking area 2:

Marking		(a)	(b)	(c)	(d)	(A)	(B)	(C)	(D)	(E)	(F)	(G)	(H)	(I)	(K)
Max. $t_{fix,ges}$ [mm]		5	10	15	20	5	10	15	20	25	30	35	40	45	50
B ≥ [mm]	M16	70	75	80	85	90	95	100	105	110	115	120	125	130	135
	M20	-				105	110	115	120	125	130	135	140	145	150

fischer Bolt Anchor FAZ II Plus dynamic

Product description
Product marking and letter code

Annex A 2

Table A3.1: Materials FAZ II Plus dynamic

Part	Designation	Material	
		FAZ II Plus dynamic	FAZ II Plus dynamic R
	Steel grade	Steel	Stainless steel R
		Zinc plated ≥ 5 µm, ISO 4042:2018	Acc. to EN 10088:2014 Corrosion resistance class CRC III acc. to EN 1993-1-4:2006+A1:2015
1	Expansion sleeve	Cold strip, EN 10139:2016 or stainless steel EN 10088:2014	Stainless steel EN 10088:2014
2	Cone bolt	Cold form steel or free cutting steel	
3	Filling adapter	Plastic	
4	Filling conical washer	Cold form steel or free cutting steel	Stainless steel EN 10088:2014
5	Spherical washer		
6	Washer	Cold strip, EN 10139:2016	
7	Hexagon nut	Steel, property class min. 8, EN ISO 898-2:2012	Stainless steel EN 10088:2014; ISO 3506-2:2018; property class – min. 70
8	Lock nut	Cold strip, EN 10139:2016	Stainless steel EN 10088:2014
	Injection cartridge	Mortar, hardener, filler (compressive strength ≥ 50 N/mm²)	

Specifications of intended use

Fastenings subject to:

Size	FAZ II Plus dynamic, FAZ II Plus dynamic R		
	M16	M20	M24
Hammer drilling with standard drill bit 		✓	
Hammer drilling with hollow drill bit with automatic cleaning 			
Static and quasi-static loading in cracked and uncracked concrete		✓	
Seismic actions category C1 and C2 – not in combination with fatigue loading		✓	
Fire exposure – not in combination with fatigue loading		✓	
Fatigue load in cracked and uncracked concrete – not in combination with seismic- or fire exosure		✓	

Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206:2013+A2:2021
- Strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (FAZ II Plus dynamic, FAZ II Plus dynamic R)
- For all other conditions according to EN 1993-1-4:2006 + A1:2015 corresponding to corrosion resistance class CRC III: for FAZ II Plus dynamic R

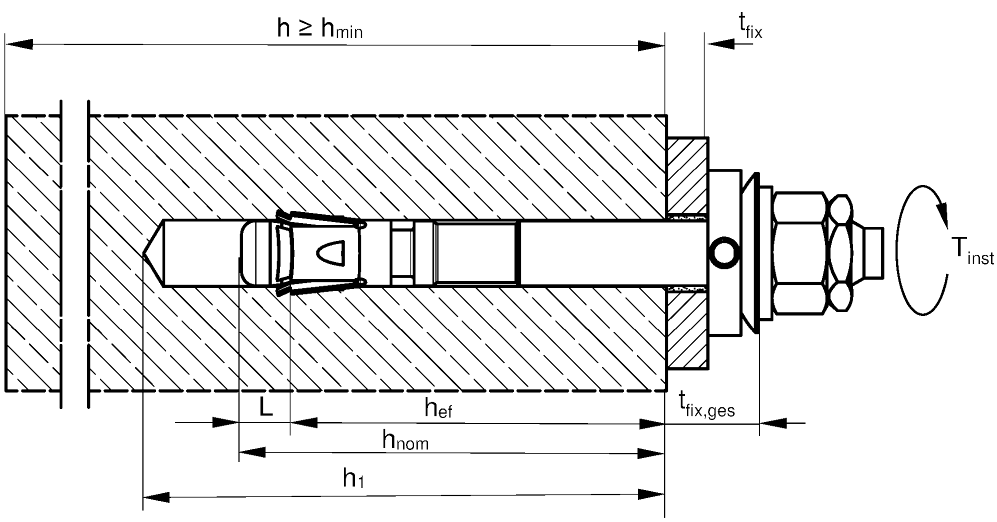
Design:

- Fastenings are to be designed under the responsibility of an engineer experienced in fastenings and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.)
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 061: 2020-08 "Design method for fasteners in concrete under fatigue cyclic loading"
- Fastenings in stand-off installation according to EN 1992-4:2018, 6.2.2.3 are not covered by this European Technical Assessment
- Fatigue design cannot be done in combination with seismic- or fire exposure

Table B2.1: Installation parameters

Size			FAZ II Plus dynamic, FAZ II Plus dynamic R		
			M16	M20	M24
Nominal drill hole diameter	$d_0 =$	[mm]	16	20	24
Maximum bit diameter with hammer or hollow drilling	$d_{cut,max}$	[mm]	16,50	20,55	24,55
Effective embedment depth	$h_{ef} \geq$	[mm]	65 - 160	100 - 180	125
Length from h_{ef} to end of cone bolt	L	[mm]	17,5	20,0	23,5
Overall fastener embedment depth in the concrete	$h_{nom} \geq$	[mm]	h_{ef} + L		
Depth of drill hole to deepest point	h_1 [1] $\geq$	[mm]	h_{nom} + 5	h_{nom} + 10	
Diameter of clearance hole in the fixture	$d_f \leq$	[mm]	18	22	26
Required setting torque	$T_{inst} =$	[Nm]	110	200	270
Minimum thickness of the fixture	$t_{fix,min} \geq$	[mm]	15	20	24
Thickness of the fixture	$t_{fix,ges} =$	[mm]	t_{fix} + 11	t_{fix} + 13	t_{fix} + 17

[1] For the application without drill hole cleaning: $h_{1,nc} = h_1 + 15$ mm



h_{ef}	=	Effective embedment depth
t_{fix}	=	Thickness of the fixture
$t_{fix,ges}$	=	Thickness of the fixture and the filling set
h_1	=	Depth of drill hole to deepest point
$h_{1,nc}$	=	Depth of drill hole to deepest point witout cleaning
h	=	Thickness of the concrete member
h_{min}	=	Minimum thickness of concrete member
h_{nom}	=	Overall fastener embedment depth in the concrete
T_{inst}	=	Required setting torque
L	=	Length from h_{ef} to end of cone bolt

(Fig. not to scale)

Installation instructions:

- Fastener installation carried out by appropriately qualified personnel according to the design drawings and under the supervision of the person responsible for technical matters on the site
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener
- Hammer- or hollow drilling according to Annex B 2
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application

Installation instructions: Drilling and cleaning the hole

Types of drills and cleaning				
Hammer drill (e.g. fischer Quattric II) with cleaning		 1: Drill the hole	 2: Clean the hole	Continue with step 5
Hammer drill (e.g. fischer Quattric II) without cleaning		 1: Drill the hole	 2: When $h_{1,nc}$ is reached: Pull out drill 3 x	 Cleaning not necessary; Continue with step 5
Hollow drill (e.g. fischer FHD)		 1: Drill the hole with automatic cleaning (e.g. fischer FVC)	 Cleaning obsolete	Continue with step 5

Installation instructions: Installation of the fastener

	5: Check the position of the conical washer
	6: Set the fastener. E.g. with fischer FA-ST II setting tool: 
	7: Apply T_{inst}
	8: Tighten lock nut manually, then use wrench to give another quarter turn
	9: The gap between anchor and fixture (annular gap) must be filled with mortar (compressive strength ≥ 50 N/mm² e.g. fischer FIS HB, FIS V Plus, FIS EM Plus or FIS SB) via the fillable conical washer.
	10: Correctly installed fastener

Cracked concrete	c_{min}	[mm]	65	85	100
Corresponding spacing	s	[mm]	according to Annex C 6		
Minimum thickness of concrete member	h_{min}	[mm]	140	160	200
Thickness of concrete member	h ≥	[mm]	max. {h_{min}; 1,5 · h_{ef}; h_1[1] + 30}		
Minimum spacing					
Uncracked concrete	s_{min}	[mm]	65	95	100
Cracked concrete	s_{min}	[mm]	65	95	100
Corresponding edge distance	c	[mm]	according to Annex C 6		
Minimum thickness of concrete member	h_{min}	[mm]	140	160	200
Thickness of concrete member	h ≥	[mm]	max. {h_{min}; 1,5 · h_{ef}; h_1[1] + 30}		
Minimum splitting area					
Uncracked concrete	$A_{sp,req}$	[·1000 mm²]	67	100	117,5
Cracked concrete	$A_{sp,req}$	[·1000 mm²]	50	77	87,5

[1] Or $h_{1,nc}$ if borehole cleaning is omitted

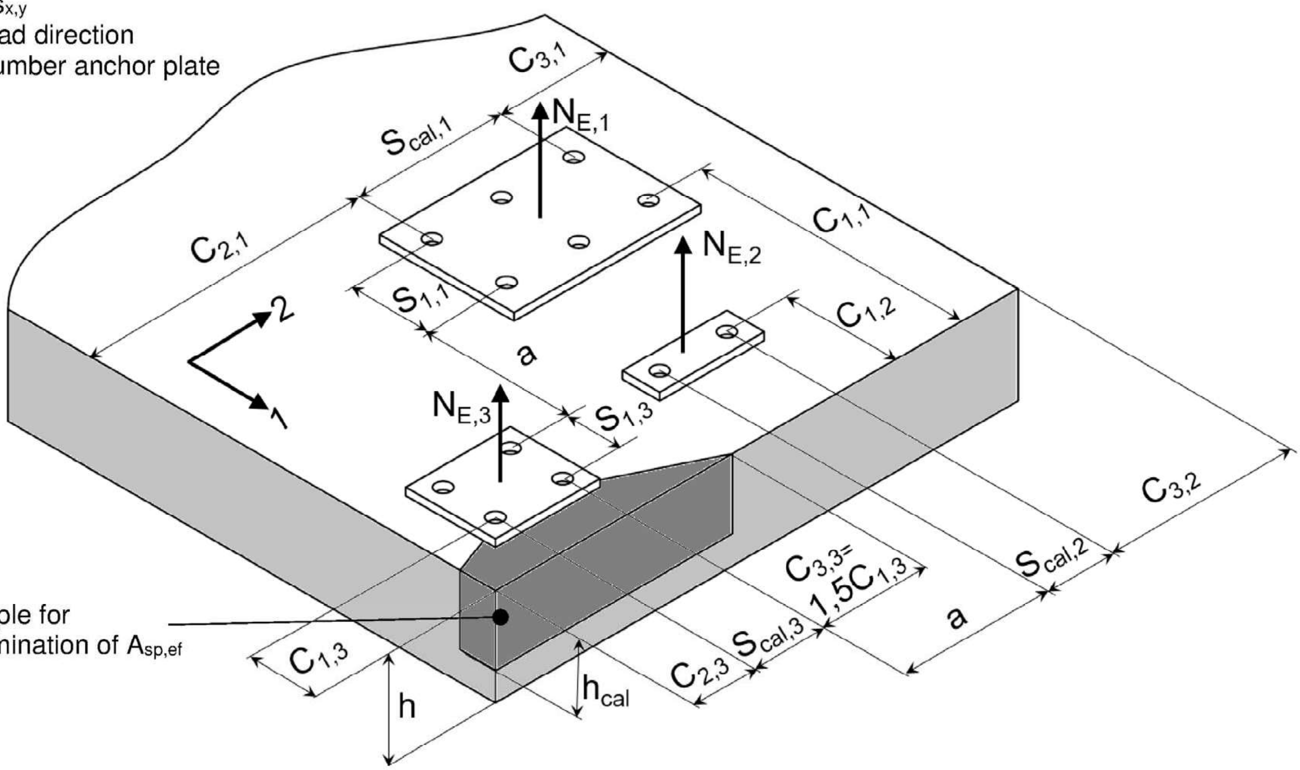
Table C5.2: Calculated values for minimum spacing and minimum edge distances **for cracked concrete with one edge** (c_2 and $c_3 \geq 1,5\ c_1$) in the cleaned borehole

Type of anchor / size		FAZ II Plus dynamic, FAZ II Plus dynamic R			
		M16		M20	M24
Effective anchorage depth	h_{ef} ≥ [mm]	65	85	100	125
Minimum thickness of concrete member	h ≥ [mm]	140	180	160	200
Minimum spacing	s_{min} [mm]	65		95	100
	for c ≥ [mm]	100	75	130	115
Minimum edge distance	c_{min} [mm]	65		85	100
	for s ≥ [mm]	165	85	230	140

Determination of $A_{sp,ef}$ for each existing free edge

Splitting failure applied for minimum edge distance and spacing in depending on h_{ef}

Definition Index:
cal = calculatory
e.g.: $s_{x,y}$
x = load direction
y = number anchor plate



Example for different anchor plates: For considering all free edges the direction 1 and 2 must be swaped.

General formulation for each free edge: $A_{sp,ef} = (c_2 + s_{cal} + c_3) \cdot h_{cal} \geq (^n/_2) \cdot A_{sp,req}$
with:
Edge distance c_1: $c_{min} \leq c_1$
Edge distance c_2: $c_{min} \leq c_2 \leq 1{,}5 \cdot c_1$
Edge distance c_3: $c_{min} \leq c_3 \leq 1{,}5 \cdot c_1$
Calculation spacing, distance between outer anchors s_{cal}: $s_{min} \leq s_{cal} \leq 3{,}0 \cdot c_1$
Distance between group of anchors a: For $a \geq 3{,}0\ c_1$ no influence between the anchor groups is taken into account.
Number of anchors n of an anchor plate as well close and parallel to the edge
Effective member thickness h_{cal}: $h_{min} \leq h$; $h_{cal} \leq h$; $h_{cal} \leq (h_{ef} + 1{,}5 \cdot c_1)$
c_1, c_2, c_3, h and s_{cal} have to be set in way that the requirement is fullfiled

For the calculation of minimum spacing and minimum edge distance of fasteners in combination with different embedment depths and thicknesses of concrete members the following equation shall be fulfilled:

$$A_{sp,req} < A_{sp,ef}$$

$A_{sp,req}$ = required splitting area (according to Annex C 5)
$A_{sp,ef}$ = effective splitting area

(Fig. not to scale)

Table C7.1: Characteristic values of **tension and shear** resistance under **seismic action category C1** – not in combination with fatigue loading

Size					FAZ II Plus dynamic, FAZ II Plus dynamic R		
					M16	**M20**	**M24**
Effective embedment depth			h_{ef}	[mm]	85 - 160	100 - 180	125
