

YDEEVNEDEKLARATION

DoP 0307

Til fischer-Zykon-panel anker FZP II

DA

1. Varetypens unikke identifikationskode: DoP 0307
2. Anvendelsesformål: Fastgørelse til montering af facadepaneler lavet af udvalgte stentyper i hht EN 1469, se appendiks, specifikt Bilage B1 - B7.
3. Fabrikant: fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Tyskland
4. Bemyndiget repræsentant: -
5. System(er) til vurdering og kontrol af konstansen af ydeevnen: 2+
6. Europæisk vurderingsdokument: EAD 330030-00-0601, Edition 10/2018
Europæisk Teknisk Vurdering
ETA-11/0145; 2022-06-09
Teknisk vurderingsorgan: DIBt- Deutsches Institut für Bautechnik
Notificeret organ(er) 2873 TU Darmstadt
7. Deklareret ydeevne(r):
Mekanisk modstand og stabilitet (BWR 1)
Karakteristisk modstand overfor udtrækssvigt under træklast: Bilag C1
Karakteristisk modstand overfor udtrækssvigt under tværlast: Bilag C1
Karakteristisk modstand overfor udtrækssvigt under kombineret belastning og tværlast: Bilag C1
Y=NPD; F_{Rk}=NPD

Kant og indbyrdes afstand: Bilag B3, C1
Holdbarhed: Bilag A3 (CRC-III)
Karakteristisk modstand for stålsvigt under belastning og tværlast: Bilag C1

Brandbeskyttelse (BWR 2)
Brandegenskaber: Klasse (A1)
8. Relevant teknisk dokumentation og/eller specifik teknisk dokumentation: -

Ydeevnen for den vare, der er anført ovenfor, er i overensstemmelse med den deklarerede ydeevne. Denne ydeevnedeklaration er udarbejdet i overensstemmelse med forordning (EU) nr. 305/2011 på eneansvar af den fabrikant, der er anført ovenfor.

Underskrevet for fabrikanten og på dennes vegne af:

Dr.-Ing. Oliver Geibig, Administrerende direktør Forretningsenheder og ingeniørarbejde
Tumlingen, 2022-07-01

Jürgen Grün, Administrerende direktør Kemi & Kvalitet

Denne DoP er tilgængelig i forskellige sprogversioner. I tilfælde af fortolkningsmæssig uoverensstemmelse, henvises der til den engelske version, som altid er gældende.

Appendikset indeholder frivillige og udvidede informationer på engelsk. Disse overgår de lokale (sprogneutrale) retslige krav.

Specific Part

1 Technical description of the product

The fischer-Zykon-panel anchor FZP II is a special anchor of sizes M 6, M 8 and M 10 which consists of a cone bolt (with external thread or internal thread), an expansion part, a sleeve and, if need be, a nut. Cone bolt and expansion part are made of stainless steel. The sleeve is made of stainless steel or carbon. The nut is made of stainless steel or aluminium. The anchor is put into an undercut drill hole and by driving-in of the sleeve it is placed form-fit.

The product description is given in Annex A. The material values, dimensions and tolerances of the components of the fastener not indicated in the annexes shall correspond to the values laid down in the technical documentation.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to breakout or pull-out failure under tension load	See Annex C 1
Characteristic resistance to breakout or pull-out failure under shear load	See Annex C 1
Characteristic resistance to breakout or pull-out failure under combined tension and shear load	See Annex C 1
Edge distance and spacing	See Annex B 3 and Annex C 1
Durability	Corrosion Resistance Class (CRC) III in accordance with EN 1993-1-4:2015
Characteristic resistance to steel failure under tension and shear loads	See Annex C 1

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 330030-00-0601 the applicable European legal act is: [97/161/EG].
The system to be applied is: 2+

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads.

Anchorage ground:

- Natural stone facade panels according to EN 1469:2015.
- The used material is free of crevices and mechanically effective cracks and alterations.
- Natural stone classified in accordance with Table B1.
- Characteristic values of the panels correspond to Annex B 3, Table B2.

Table B1: Stone groups for façade panels made of natural stone

Stone group		Natural stone type	Boundary conditions
I	High quality intrusive rocks (plutonic rocks)	Granite, granitite, tonalite, diorite, monzonite, gabbro, other magmatic plutonic rocks	None
II	Metamorphic rocks with „hard stone characteristics“	Quartzite, granulite, gneiss, migmatite, slate ²⁾	None
III	High quality extrusive rocks (volcanic rocks)	Basalt and basaltic lava without harmful ingredients (like sun burner basalt)	Minimum density ρ : basalt: 2,7 kg/dm ³ basaltic lava: 2,2 kg/dm ³
IV	Sedimentary rocks with „hard stone characteristics“ ¹⁾	Sandstone, limestone and marble	Minimum density ρ : sandstone: 2.1 kg/dm ³

- ¹⁾ For façade panels made of natural stones with planes of anisotropies, the difference between the flexural strength determined parallel to the planes of anisotropy and perpendicular to the edges of the planes of anisotropy shall not be more than 50 %.
- ²⁾ Slate is only covered by EAD if the mean value of tensile bond strength is larger than 0,5 N/mm² and the minimum value of tensile bond strength is larger than 0,25 N/mm²

Use conditions (Environmental conditions):

- In accordance with EN 1993-1-4:2015 dependent on Corrosion Resistancy Class (CRC) (ETA Section 3.1)

fischer Zykon panel anchor FZP

Intended use
Specifications

Annex B 1
Appendix 6 / 13

Design:

- The design of anchorages under static and quasistatic load is carried out in accordance with: EOTA Technical Report TR 062:2018 "Design of fasteners for façade panels made of natural stone".
- The façade panels, their fixings as well as the substructure including its connection to wall brackets and their connection to the construction works are designed for the respective case of application under the responsibility of an engineer skilled in the field of façade construction.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.

Installation:

- The drillings are done at the factory or on site under workshop conditions; when drilling on site the execution is supervised by the responsible project supervisor or a skilled representative of the project supervisor.
- Making of the undercut drilling is done with a special drill bit or a special CNC drill bit according to Annex B 4 and a special drilling device in accordance with the information deposited with Deutsches Institut für Bautechnik.
- The drilling residues are removed from the drill hole.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole.
- The geometry of the drill hole is checked on 1 % of all drillings. The following dimensions shall be checked and documented according to manufacturer's information and testing instructions by means of a control aids according to Annex B 5, Figure B5, B6 and B7.
 - Diameter of the cylindrical drill hole.
 - Diameter of the undercut.
 - Remaining wall thickness (drill hole depth and panel thickness respectively).
- If the tolerance given in Annex B 4, Table B3 is exceeded, the geometry of the drill hole shall be checked on 25 % of the drillings performed. No further drill hole should exceed the tolerances otherwise all the drill holes have to be controlled. Drill holes falling below or exceeding the tolerances shall be rejected.

Note: Checking the geometry of drill hole on 1 % of all drillings means that on one of 25 panels (this corresponds to 100 drillings for panels with 4 undercut anchors) one drilling shall be checked. If the tolerances given in Annex B 4, Table B3 are exceeded, the control shall be increased to 25 % of the drillings, i.e. one drilling shall be checked on all the 25 panels.

- The anchors are installed in a deformation controlled manner. For this purpose suitable installation tools per Annex B 5, Figure B4 shall be used. The anchor is set correctly if the bolt projection "b" in accordance to Annex A 2 (designation system) according to Annex B 6 Figure B10 and B11 is observed. For flush mounting, the sleeve must not project beyond the plate surface. Internal thread anchors are mounted flush or recessed according to Annex B 6. The dimension "b" is indicated in the anchor designation.
- During transport and storage on site the façade panels are protected from damages; the façade panels are not to be hung up jerkily (if need be lifters shall be used for hanging up the façade panels); façade panels and reveal panels respectively with incipient cracks are not be installed.
- The façade panels are arranged in a "reclined" or "upright" position.
- Overhead installation is allowed (e.g.: fastening cladding of ceilings)
- The façade are installed by skilled specialists and the laying instructions of the manufacturer shall be paid attention to.
- The façade panels must not be used for the transmission of scheduled impact loads and for the protection against falling.

Specifications

Annex B 2
Appendix 7 / 13

Table B2: Characteristic values of façade and reveal panels made of nature stones

Façade panels				
Nominal panel thickness	h_{nom}	[mm]		$20 (30)^{1)} \leq h_{nom}$
Number of anchors (rectangular arrangement)	N	[-]		4
Embedment depth ²⁾	h_s	[mm]		$12 \leq h_s \leq 38$
Minimum edge distance ³⁾	a_{rL} bzw. a_{rH}	[mm]		50
Maximum edge distance ⁵⁾	a_{rL} bzw. a_{rH}	[mm]		$0,25 L$ bzw. $0,25 H$
Minimum spacing ³⁾	a_L bzw. a_H	[mm]		$8 h_s$
Minimum residual wall thickness ⁴⁾	h_r	[mm]		$0,4 h_{nom}$
Minimum characteristic flexural strength in accordance with EN 12372:2007				
Padang Cristallo G603, China	Stone group I	$\sigma_{5\%} \geq$	[N/mm ²]	13,4
Jura Limestone (yellow), Germany	Stone group IV	$\sigma_{5\%} \geq$	[N/mm ²]	12,4

- 1) For sandstone, limestone and basaltlava: panel thickness $h \geq 30$ mm, if the bending strength of the material $\sigma_{5\%} < 8$ N/mm².
- 2) $h_s = h_1 = h_v$ in 1 mm steps only (12, 13, 14 mm ... 38 mm) - tolerances see Annex B 4, Table B3, footnote ³⁾
- 3) For small fitting, differential or fill in pieces, the minimum edge distance or spacing shall be chosen constructively. In case of design under static loading using FEM, smaller edge distances are allowed.
- 4) Only for stand-off fixing.
- 5) Applies to the simplified verification with the diagrams Figure 3.4 TR062:2018. An object-related verification may differ.
