

## LEISTUNGSERKLÄRUNG

### DoP 0346

für fischer TermoZ CS II 8 und fischer TermoZ CS II 8 DT 110 V (Kunststoffdübel für die Verwendung in Beton und Mauerwerk)

DE

1. Eindeutiger Kenncode des Produkttyps: DoP 0346
2. Verwendungszweck(e): Schraubdübel zur Befestigung von außenseitigen Wärmedämm-Verbundsystemen (WDVS) mit Putzschicht in Beton, Mauerwerk, haufwerksporigem Leichtbeton und Porenbeton und für die Befestigung in Deckenuntersichten aus Beton, siehe Anhang, insbesondere die Anhänge B1- B4.
3. Hersteller: fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Deutschland
4. Bevollmächtigter: -
5. AVCP - System/e: 2+
6. Europäisches Bewertungsdokument: EAD 330196-01-0604-v01  
Europäische Technische Bewertung: ETA-14/0372; 2023-11-03  
Technische Bewertungsstelle: ETA-Danmark A/S  
Notifizierte Stelle(n): 2873 TU Darmstadt
7. Erklärte Leistung(en):  
**Sicherheit bei der Nutzung (BWR 4)**  
**Charakteristische Tragfähigkeit der Dübel pro Panel:**  
Charakteristischer Widerstand bei Kurzzeit Zugbelastung: Anhang C5  
Charakteristischer Widerstand bei Langzeit-Zugbelastung: Anhang C5  
Minimaler Randabstand: Anhang B3  
Minimaler Achsabstand: Anhang B3  
  
**Verschiebungen:**  
Zuglast: Anhang C5  
Kurzzeit-Verschiebungen: Anhang C5  
Langzeit-Verschiebungen: Anhang C5  
  
**Tellersteifigkeit:**

## **II SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT**

### **1 Technical description of product**

The screwed-in anchors fischer TermoZ CS II 8 and fischer TermoZ CS II 8 DT 110 V are used for fixing of external thermal insulation composite systems (ETICS). The fischer TermoZ CS II 8 consists of an anchor sleeve made of polypropylene with a diameter of 8 mm and an insulation plate made of glass-fiber reinforced polyamide with a diameter of 60 mm. The fischer TermoZ CS II 8 DT 110 V consists of an anchor sleeve made of polypropylene with a diameter of 8 mm and an insulation plate made of glass-fiber reinforced polyamide with a diameter of 110 mm. The color of the anchor sleeve is grey. The special compound screw is made of galvanised steel and glass-fiber reinforced polyamide. The anchor is expanded by screwing the screw into the sleeve. It is possible to install the anchor flush or countersunk mounted to the surface of the insulation.

The product description is given in Annex A.

### **2 Specification of the intended use in accordance with the applicable European Assessment Document (hereinafter EAD)**

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B1 to B3.

The provisions made in this European Technical Assessment are based on an assumed intended working life of the anchor of 25 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### **3 Performance of the product and references to the methods used for its assessment**

#### **3.1 Characteristics of product**

**Safety in case of fire (BWR 2):**

No Performance Assessed.

**Safety in use (BWR4):**

The essential characteristics are detailed in Annex B3 and Annex C1 to C5.

Characteristic pull-through capacity for a panel:  
No performance assessed.

Note. The characteristic pull-through capacity for a panel depends on the relevant panel and is to be assessed for the full ETICS kit taking into account the relevant insulation product.

**Energy economy and heat retention (BWR6):**

The essential characteristics are detailed in the Annex C3.

Other Basic Requirements are not relevant.

**General aspects**

The verification of durability is part of testing of the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

#### **3.2 Methods of assessment**

The assessment of fitness of the anchor for the intended use in relation to the requirements for mechanical resistance and stability and safety in use in the sense of the Basic Requirements 4 has been made in accordance with the EAD 330196-01-0604 Plastic anchors made of virgin or non-virgin material for fixing of external thermal insulation composite systems with rendering as well as EAD 330196-01-0604-v01 - Screwed-in plastic anchors for fixing of external thermal insulation composite systems (ETICS) on bottom side of ceilings.

## **4 Assessment and verification of constancy of performance (AVCP)**

### **4.1 AVCP system**

According to the decision 97/463/EC of the European Commission, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) is 2+.

## TermoZ CS II 8

### Legend

- $h_{nom}$  = Overall plastic anchor embedment depth in the base material
- $h_{ef}$  = Effective anchorage depth in the base material
- $h_1$  = Depth of drilled hole to deepest point
- $h$  = Thickness of member (wall)
- $h_D$  = Thickness of insulation material
- $t_{tol}$  = Thickness of equalising layer and / or non-load-bearing coating
- $h_R$  = Thickness of cap

Figures not to scale

## Specifications of intended use

### Anchorage subject to:

- The anchor may be used for transmission of wind suction loads.
- Additionally the anchor may be used for transmission of dead loads of thermal insulation panels with or without rendering on bottom side of ceilings.
- Anchors may be used for fixing of thermal insulation panels with or without rendering on bottom side of ceilings in concrete with or without supplementary adhesive. The product can only be used for ETICS with the following parameters:
  - for use of insulation panels with a tensile resistance equal and more than 80 kPa - adhesion of ETICS's rendering to the insulation panel shall be at least 80 kPa.
  - for use of insulation panels with a tensile resistance less than 80 kPa - adhesion of ETICS's rendering to the insulation panel shall be at least as high as nominal tensile resistance of a panel.

### Base materials:

- Normal weight concrete without fibres  $\geq$  C12/15 (base material group "A") as per EN 206:2013+A1:2016, see Annex C1.

Note: only for use on bottom side of ceilings:

Reinforced or unreinforced concrete without fibres, strength  $\geq$  C12/15 (base material group "A") as per EN 206, see Annex C5.

- Solid masonry (base material group "B"), as per EN 771-1:2011+A1:2015, EN 771-2:2011+A1:2015, EN 771-3:2011+A1:2015, see Annex C1.
- Hollow or perforated masonry (base material group "C"), as per EN 771-1:2011+A1:2015, EN 771-2:2011+A1:2015 or EN 771-3:2011+A1:2015, see Annex C1 and C2.
- Lightweight aggregate concrete (base material group "D"), as per EN 1520:2011 / EN 771-3:2011+A1:2015, see Annex C2.
- Autoclaved aerated concrete (base material group "E"), as per EN 771-4:2011+A1:2015, see Annex C2.
- For other comparable materials of the base material groups "A", "B", "C", "D" and "E" the characteristic resistance of the anchor may be determined by job site tests according to EOTA Technical Report TR 051 Edition April 2018.

### Temperature Range:

- 0 °C to + 40 °C (max. short term temperature + 40 °C and max. long term temperature + 24 °C) of the base material.

### Design:

- The anchorages are designed under the responsibility of an engineer experienced in anchorages and masonry work with the partial factors  $\gamma_M = 2,0$  und  $\gamma_F = 1,5$  if there are no other national regulations.
- For use on bottom side of ceilings in concrete, anchorages are designed with partial safety factors  $\gamma_{EPS} = 1,5$  for EPS insulation panels and  $\gamma_{MW} = 2,0$  for mineral wool panels, if there are no other national regulations.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchors is indicated on the design drawings.
- Fasteners are only to be used for multiple fixings of thermal insulation composite systems.
- For use on bottom side of ceilings in concrete at least 4 anchors per m<sup>2</sup> shall be used in insulation panels in absence of other national requirements.

**fischer TermoZ CS II 8 and fischer TermoZ CS II 8 DT 110 V**

**Intended use**  
Specifications

**Annex B1**

**Installation:**

- Drilling method see Annex C1, C2 and C5.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on the site.
- Installation temperature of the anchor from 0 °C to + 40 °C.
- Exposure to UV due to solar radiation of the anchor not protected by rendering  $\leq 6$  weeks.
- The anchors have to be arranged depending on the used insulation material, the ETIC system and/or the system approval.
- For application on bottom side ceilings, it is possible to use the anchors without rendering or applying under UV protection longer than 6 weeks. If the anchors are not protected by rendering for the lifetime, the anchors must be covered by stainless steel or carbon steel with coating complying with corrosion resistance class 3 according to EN ISO 9223 or EN ISO 12944-2. Other materials are suitable if the evidence of non-UV transmission is provided. Yearly checks are required and damaged covers have to be replaced.
