## Specific part

### 1 Technical description of the product

The fischer frame fixing in the range SXR 8, SXRL 8, SXR 10, SXRL 10 and SXRL 14 is a plastic anchor consisting of a plastic sleeve made of polyamide and an accompanying specific screw of galvanised steel, of galvanised steel with an additional organic layer or of stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 2

#### 3.2 Mechanical resistance and stability (BWR 4)

Essential characteristic	Performance
Resistance to steel failure under tension loading	See Annex C 1
Resistance to steel failure under shear loading	See Annex C 1
Resistance to pull-out or concrete failure under tension loading (base material group a)	See Annex C 1
Resistance in any load direction without lever arm (base material group b, c, d)	See Annexes C 16 – C 45
Edge distance and spacing (base material group a)	See Annex B 4
Edge distance and spacing (base material group b, c, d)	See Annex B 5 and B 6
Displacements under short-term and long-term loading	See Annex C 2
Durability	See Annex B 1 and B 2

#### **4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with European Assessment Document EAD 330284-00-0604 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

The following standards and documents are referred to in this European Technical Assessment:

- EOTA European Assessment Document EAD 330284-00-0604, edition December 2020: Plastic anchors for redundant non-structural systems in concrete and masonry
- EOTA Technical Report TR 051, Edition April 2018: Recommendations for job site tests of plastic anchors and screws
- EOTA Technical Report TR 064, Edition May 2018: Design of plastic anchors in concrete and masonry
- EN 206:2013+A1:2016: Concrete – Specification, performance, production and conformity
- EN 771-1:2011+A1:2015: Specification for masonry units – Part 1: Clay masonry units
- EN 771-2:2011+A1:2015: Specification for masonry units – Part 2: Calcium silicate
- EN 771-3:2011+A1:2015: Specification for masonry units – Part 3: Aggregate concrete masonry units (dense and lightweight aggregates)
- EN 771-4:2011+A1:2015: Specification for masonry units – Part 4: autoclaved aerated concrete masonry units
- EN 998-2:2010: Specification for mortar for masonry - Part 2: Masonry mortar
- EN 1993-1-4:2006 + A1:2015: Eurocode 3: Design of steel structures – Part 1-4: General rules - Supplementary rules for stainless steels
- EN 12602:2016: Prefabricated reinforced components of autoclaved aerated concrete
- EN ISO 4042:2018: Fasteners – Electroplated coating systems

## SXR

## SXRL (e.g. with $h_{nom2}$ )

### Legend

- $h_{nom}$  = Overall plastic anchor embedment depth in the base material
- $h_1$  = Depth of drill hole to deepest point
- $d_0$  = Nominal drill hole diameter
- $h$  = Thickness of member (base material)
- $t_{fix}$  = Thickness of fixture and / or non-load-bearing layer

Installed anchor

Annex A 1

Appendix 3 / 57

## Anchor sleeves – flat collar versions of SXR and SXRL

Countersunk sleeve version also available for both versions

\*see Table A3.1 and Annex B 7

### Special Screws

#### Countersunk screw

#### Hexagonal screw with washer

#### Hexagonal screw

- 1) Additional marking for the special screw, stainless steel version: e.g. "A4" or "R" or "A2".
- 2) Internal driving feature for TX bit is optional for hexagonal head screw.
- 3) Optional additional version with underhead ribs.

## Specifications of intended use

### Anchorage subject to:

- Static and quasi-static loads.
- Redundant non-structural systems.

### Base materials:

- Reinforced or unreinforced concrete without fibres, strength classes  $\geq$  C12/15 (base material group "a"), as per EN 206, see Annex C 1 and C 3.
- Thin-walled concrete components (e.g. weather shells) strength classes  $\geq$  C12/15 (base material group "a"), as per EN 206, thickness  $\geq$  40 mm, see Annex C 1 and C 3.
- Pre-stressed compacted normal weight concrete core slabs  $\geq$  C45/55 (base material group "a") as per EN 206, see Annex C 1 and C 3.
- Solid brick masonry (base material group "b") as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 3 – C 4, C 17 – C 26.  
Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit – all characteristic resistance values of solid brick masonry are valid for installation in the stretcher and in the header side of the bricks.
- Hollow or perforated brick masonry (base material group "c"), as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 5 – C 15, C 26 – C 43: installation in stretcher side  
see Annex C 8, C 43: installation in header side.
- Reinforced autoclaved aerated concrete (base material group "d"), as per EN 12602, and unreinforced autoclaved aerated concrete (base material group "d") as per EN 771-4, see Annex C 15, C 44 and C 45.
- Mortar strength class of the masonry  $\geq$  M2,5 in accordance with EN 998-2.
- For other comparable base materials of the base material group "a", "b", "c" and "d" the characteristic resistance of the anchor may be determined by job site tests in accordance with TR 051.

### Temperature Range:

SXR 8 and 10 and SXRL 8

- c: - 40 °C to 50 °C (max. short term temperature + 50 °C and max long term temperature + 30 °C)
- b: - 40 °C to 80 °C (max. short term temperature + 80 °C and max long term temperature + 50 °C)

SXRL 10 and 14

- c: - 20 °C to 50 °C (max. short term temperature + 50 °C and max long term temperature + 30 °C)
- b: - 20 °C to 80 °C (max. short term temperature + 80 °C and max long term temperature + 50 °C)

**fischer frame fixing SXR / SXRL**

**Intended use**  
Specifications

**Annex B 1**

Appendix 6 / 57

**Use conditions (Environmental conditions):**

- Structures subject to dry internal conditions: Special screw made of zinc coated steel or stainless steel.
- The specific screw made of galvanised steel or galvanised steel with an additional organic layer may also be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e.g. undercoating or body cavity protection for cars).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist: Special screw made of stainless steel of corrosion resistance class CRC III.

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

**Design:**

- The anchorages are to be designed in accordance with TR 064 under the responsibility of an engineer experienced in anchorages and concrete/masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.

**Installation:**

- Hole drilling by the drilling method in accordance with Annex C 1 for base material group “a” and Annex C 17 - C 45 for base material group “b”, “c” and “d”.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature from SXR 8/10, SXRL 8 and SXRL 14:         - 5 °C to + 40 °C  
  SXRL 10:         - 20 °C to + 40 °C
- Exposure to UV due to solar radiation of the not protected anchor by rendering ≤ 6 weeks.
- No ingress of water in the borehole at temperatures < 0 °C.

**Table B4.1: Minimum thickness of member, edge distances and spacing in concrete – base material group “a”**

Anchor type	Embedment depth $h_{nom}$ [mm]	Concrete strength class	Minimum thickness of member $h_{min}$ [mm]	Characteristic edge distance $c_{cr}$ [mm]	Characteristic spacing $s_{cr}$ [mm]	Minimum edge distances and spacing <sup>1)</sup>
						$c_{min}, s_{min}$ [mm]
SXR 8	≥ 50	C12/15	100	70	70	$s_{min} = 70$ for $c \geq 70$ $c_{min} = 70$ for $s \geq 70$
		≥ C16/20		50	65	$s_{min} = 50$ for $c \geq 50$ $c_{min} = 50$ for $s \geq 50$
SXRL 8	≥ 50	C12/15	80	85	90	$s_{min} = 85$ for $c \geq 85$ $c_{min} = 85$ for $s \geq 85$
		≥ C16/20		60	75	$s_{min} = 60$ for $c \geq 60$ $c_{min} = 60$ for $s \geq 60$
	≥ 70	C12/15	100	85	105	$s_{min} = 85$ for $c \geq 85$ $c_{min} = 85$ for $s \geq 85$
		≥ C16/20		60	90	$s_{min} = 60$ for $c \geq 60$ $c_{min} = 60$ for $s \geq 60$
SXR 10	≥ 50	C12/15	100 <sup>4)</sup>	140	100	$s_{min} = 70$ for $c \geq 210$ $c_{min} = 85$ for $s \geq 100$
		≥ C16/20		100	90	$s_{min} = 50$ for $c \geq 150$ $c_{min} = 60$ for $s \geq 70$
SXRL 10	≥ 50	≥ C12/15	100 <sup>4)</sup>	140	120	$s_{min} = 70$ for $c \geq 140$ $c_{min} = 70$ for $s \geq 175$
		C16/20		100	105	$s_{min} = 50$ for $c \geq 100$ $c_{min} = 50$ for $s \geq 125$
	≥ 70 <sup>2)</sup>	C12/15		140	120	$s_{min} = 70$ for $c \geq 140$ $c_{min} = 70$ for $s \geq 175$
		≥ C16/20		100	105	$s_{min} = 50$ for $c \geq 100$ $c_{min} = 50$ for $s \geq 125$
SXRL 14	≥ 70 <sup>3)</sup>	C12/15	110	140	135	$s_{min} = 85$ for $c \geq 140$ $c_{min} = 85$ for $s \geq 175$
		≥ C16/20		100	120	$s_{min} = 60$ for $c \geq 100$ $c_{min} = 60$ for $s \geq 125$

1) Intermediate values by linear interpolation.

2) Values valid for reinforced concrete.

Please note: Values for non-reinforced concrete are  $h_{min} = 110$  mm and  $c_{min} = s_{min} = 80$  mm for concrete ≥ C16/20 and  $c_{min} = s_{min} = 110$  mm for concrete C12/15.

3) Please note: Values for non-reinforced concrete are  $h_{min} = 110$  mm,  $c_{min} = 100$  mm,  $s_{min} = 80$  mm for concrete ≥ C16/20 and  $c_{min} = 140$  mm,  $s_{min} = 110$  mm for concrete C12/15.

4) Also valid for thin concrete slabs and prestressed hollow concrete core slabs see Table B3.3  $h \geq 40$  mm,  $h_{nom} = 50$  mm to 59 mm.

Fixing points with a spacing  $a \leq s_{cr}$  are considered as a group with a maximum characteristic resistance  $N_{RK,p}$  according to Table C1.2. For a spacing  $a > s_{cr}$  the anchors are considered as single anchors, each with a characteristic resistance  $N_{RK,p}$  according to Table C1.2.

Appendix 11 / 57

## Installation instructions

1. Drill the bore hole according to Table B3.1 using the drilling method described in the corresponding Annex C.

2. Base material group „a“, „b“, „d“: Remove dust from borehole.

3. Insert anchor (screw and sleeve) by using a hammer until the collar of the plastic sleeve is flush with the surface of the fixture. In case of using brick S8 (see Table A3.1 footnote 4), additional embedment depths  $h_{nom}$  150mm or  $h_{nom}$  180 mm may be taken by measuring the anchorage depth and the fixture height. The corresponding length of anchor should be taken.

4. The screw is screwed-in until the head of the screw touches the sleeve. The anchor is correctly mounted, when the head of the screw fits tight on the surface and cannot be screwed-in any further.

5. Correctly installed anchor in concrete.

6. Correctly installed anchor in hollow or perforated masonry.

## Footnotes for Annex C 17 – C 43

- 1) In absence of other national regulations.
- 2) Only valid for temperature range 30/50 °C.
- 3) Only valid for edge distance  $c \geq 150$  mm; intermediate values by linear interpolation.
- 4) Only valid for edge distance  $c \geq 200$  mm; intermediate values by linear interpolation.
- 5) Only valid for edge distance  $c \geq 150$  mm for temperature range 30/50° C; intermediate values by linear interpolation.
- 6) Only valid for edge distance  $c \geq 200$  mm for temperature range 30/50° C; intermediate values by linear interpolation.
- 7) Only valid for spacing  $s \geq 250$  mm
- 8) Only valid for spacing  $s \geq 250$  mm for temperature range 30/50° C
- 9) The characteristic resistance  $F_{Rk}$  of lower  $h_{nom}$  can also be taken for next higher  $h_{nom}$ .
- 10) No performance assessed.
- 11) The characteristic resistance  $F_{Rk}$  is taken from the lower compressive strength of the masonry unit.
- 12) The characteristic resistance  $F_{Rk}$  is only valid for shear loads  $V$  without lever arm, for single anchors with  $s_{min} \geq 250$  mm in the header side.
- 13) Only valid for  $h_{min} \geq 248$  mm.
- 14) The compressive strength of the single brick must not be less than 80% of the mean compressive strength.
- 15) The lowest load of two consecutive embedment depths may be used for the intermediate embedment depths.
- 16) If the compressive strength of the base material according to EN 771-1, EN 771-2 or EN 771-3 on the construction side is lower than the mean compressive strength given in the tables according to Annex C 17 – C 43,  $F_{Rk}$  shall be calculated as follows:

$$F_{Rk, construction\ site} = F_{Rk} (Table\ C.\ "X") \cdot \frac{\text{Mean compressive strength (construction site)}}{\text{Mean compressive strength (Table C."X")}}$$

### Detailed design of header side and stretcher side

### Possible position of the anchor in the header side of brick e.g. S9 (see Annex C 8, C 43)

### Possible Position of the anchor in the stretcher side of brick e.g. S9 (see Annex C 8, C 32)

Partial factor	$\gamma_{MAAC}^{1)}$ [-]	2,0								

1) In absence of other national regulations.

2) Only valid for temperature range 30/50° C.

3) The characteristic resistance  $F_{RK}$  for SXRL 10 also valid for installation in the stretcher and in the header side of the blocks.

4) Values valid for member thickness  $h_{min} \geq 175$  mm.

5) Only valid for edge distance  $c_{1,min} \geq 100$  mm and  $c_{2,min} \geq 150$  mm.

6) Only valid for edge distance  $c_{1,min} \geq 120$  mm  $c_{2,min} \geq 180$  mm.

7) Only valid for spacing  $s_{1,min} \geq 240$  mm and  $s_{2,min} \geq 250$  mm

8) No performance assessed.
