### **DECLARATION OF PERFORMANCE**

### DoP 0323

for fischer universal plug DuoPower ETA (Plastic anchor for use in concrete and masonry)

1. Unique identification code of the product-type: DoP 0323

2. Intended use/es: Plastic anchors for multiple use in concrete and masonry for non-structural applications (use

category a,b, c), see appendix, especially annexes B1 - B4.

3. Manufacturer: fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Germany

4. Authorised representative:

5. System/s of AVCP: 2+

6. European Assessment Document: EAD 330284-00-0604 (June 2018)
European Technical Assessment: ETA-22/0512; 2022-11-04
Technical Assessment Body: Kiwa Nederland B.V.
Notified body/ies: 2873 TU Darmstadt

7. Declared performance/s:

Mechanical resistance and stability (BWR 4)

Resistance to steel failure under tension loading: Annex C1

Resistance to steel or polymer failure under shear loading: Annexes C1, C2

Resistance to pull-out or concrete failure or polymer failure under tension loading (base material group a): Annex C2

Resistance in any load direction without lever arm (base material group b, c): Annex C3

Edge distance and spacing (base material group a): Annex B2

Edge distance and spacing (base material group b, c): Annex B3

Displacements under short-term and long-term loading: Annex C2

Durability: Annexes A4, B1

### Safety in case of fire (BWR 2)

Reaction to fire:Class A1 Resistance to fire: NPD

8. Appropriate Technical Documentation and/or Specific -

Technical Documentation:

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Dr.-Ing. Oliver Geibig, Managing Director Business Units & Engineering

Tumlingen, 2022-11-24

Jürgen Grün, Managing Director Chemistry & Quality

This DoP has been prepared in different languages. In case there is a dispute on the interpretation the English version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

# **Specific parts**

# 1 Technical description of the product

The plastic anchor "fischer universal plug DuoPower ETA" is a plastic anchor consisting of a sleeve and a screw. The plastic sleeve is expanded by screwing in the screw which presses the sleeve against the wall of the drilled hole.

Polyamide PA6 of grey colour and polypropylene PP of red colour is used as material for the sleeve. The screws are made of galvanised steel, galvanised steel with additional organic layer or stainless steel of corrosion resistance class II or III. There are three variants of the fischer PowerFast II: a countersunk screw, a raised countersunk head screw, a pan head screw, according to ETA-19/0175. There are also three variants of the special screw: a countersunk screw, a hexagonal screw and a hexagonal screw with washer. Specific dimensions, drawings and material parameters are shown in Annex A.

# 2 Specification of the intended use(s) in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The plastic anchor "fischer universal plug DuoPower ETA" is intended for anchorages subject to static and quasi-static loading. The applicable base material groups are "a", "b" and "c".

The verifications and assessment methods on which this European Technical Assessment is based on lead to the assumption of a working life of the plastic anchor "fischer universal plug DuoPower ETA" for the intended use of 50 years when installed in the works provided that the plastic anchor is subject to appropriate installation.

The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

# 3 Performance of the product and references to the methods used for its assessment

# 3.1 Basic Works Requirements 2: Safety in case of fire

Table 3.1 Basic Works Requirements 2: Safety in case of fire

Essential characteristic	Performance
Reaction to fire	Class A 1
Resistance to fire	no performance assessed

# 3.2 Basic Works Requirements 4: Mechanical resistance and stability

Table 3.2 Basic Works Requirements 4: Mechanical resistance and stability

Essential characteristic	Performance
Characteristic resistance to steel failure under tension loading	see Annex C 1
Characteristic resistance to steel or polymer failure under shear loading	see Annex C 1 and Annex C 2
Characteristic resistance to pull-out or concrete failure or polymer failure under tension loading (only base material group "a")	see Annex C 2
Characteristic resistance in any load direction without lever arm (only base material group "b" and "c")	see Annex C 3
Minimum edge distances and spacing	see Annex B 2 and Annex B 3
Displacements under short-term and long-term loading	see Annex C 2

# 3.3 Other essential characteristics

Table 3.3 Other essential characteristics

Essential chara	Performance	
Durchility	Corrosion of Metal parts	for screws see Annex A 4 and Annex B 1
Durability	High alkalinity of plastic sleeve	no negative effects

Screw length  $I_s \ge 85$  mm. Screw length  $I_s \ge 87$  mm.

# Specifications of intended use

# Anchorages subject to:

- · Static and quasi-static loads.
- · Multiple fastening of non-structural systems.

### **Base materials:**

- Reinforced or unreinforced compacted normal weight concrete without fibres, strength classes ≥ C12/15, base material group "a", in accordance with EN 206, see Annex C 2.
- Solid brick masonry, base material group "b", as per EN 771-1 or EN 771-2, see Annex C 3.
   Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow or perforated brick masonry, base material group "c", as per EN 771-1, see Annex C 3.
- Mortar strength class of masonry ≥ M2,5 in accordance with EN 998-2.
- For other comparable base materials of the base material group "a", "b" or "c", the characteristic resistance of the anchor may be determined by job site tests in accordance with TR 051.

# **Temperature Range:**

a: - 20 °C to 40 °C (max. short term temperature + 40 °C and max. long term temperature + 24 °C).

# Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: fischer PowerFast II of zinc coated steel or special screw made of zinc coated steel or stainless steel.
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist: Special screw made of stainless steel of corrosion resistance class CRC III.
  - Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

### Design:

- The anchorages are designed in accordance with TR 064 under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the
  nature and strength of the base materials and the dimensions of the anchorage members as well as of the
  relevant tolerances. The position of the anchor is indicated on the design drawings.
- Fasteners are only to be used for multiple use for non-structural application in accordance with TR 064.

### Installation:

- Hole drilling by the drilling method according to Annex C 2 and C 3 for base material group "a". "b" and "c".
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature from -5 °C to +40 °C.
- Exposure to UV due to solar radiation of the anchor not protected ≤ 6 weeks.
- No ingress of water in the borehole at temperatures < 0 °C.</li>

# Installation instructions

The following pictures show a fastening by a timber fixture part, exemplarily on the substrate concrete for solid bricks and on the substrate perforated clay brick for hollow or perforated bricks – summary of all kind of base materials see Annex C 2 and C 3.

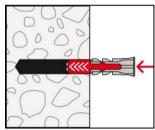

# Concrete and solid bricks

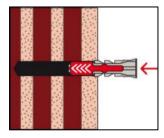

# hollow or perforated bricks

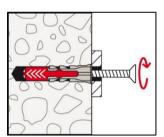

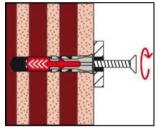

1. Drill the bore hole acc. to Table B 2.1 using the drilling method described in the corresponding Annex C 2 and C 3.

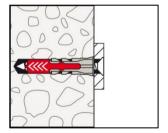

2. Insert anchor by using a hammer until the collar of the plastic sleeve is flush with the surface of the anchorage ground.

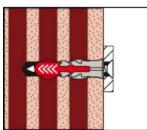

3. Attach fixture part and screw in the screw.

The anchor is correctly mounted, when the head of the screw fits tight on the surface and cannot be screwed-in easily any further.

4. Correctly installed anchor.
