

## DECLARATION OF PERFORMANCE

### DoP 0318

for fischer injection system FIS AB (Metal injection anchors for use in masonry)

EN

1. Unique identification code of the product-type: **DoP 0318**
2. Intended use/es: **Post-installed fastening in masonry units. See appendix, especially annexes B1 - B13.**
3. Manufacturer: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Germany**
4. Authorised representative: **-**
5. System/s of AVCP: **1**
6. European Assessment Document: **EAD 330076-00-0604, Edition 11/2017**  
European Technical Assessment: **ETA-17/0352; 2022-08-18**  
Technical Assessment Body: **DIBt- Deutsches Institut für Bautechnik**  
Notified body/ies: **2873 TU Darmstadt**

#### 7. Declared performance/s:

##### **Mechanical resistance and stability (BWR 1)**

###### **Characteristic values for resistance:**

Reduction factor: Annex C33

Characteristic resistance of a single anchor under tension loading: See appendix, especially annexes B3, C1, C3, C5, C7, C9, C11, C13, C15, C17, C19, C21, C23, C25, C27, C29, C32

Characteristic resistance of an anchor group under tension loading: Annex B13

Characteristic resistance of a single anchor under shear loading: See appendix, especially annexes B3, C2, C3, C5, C7, C9, C11, C13, C15, C17, C19, C21, C23, C25, C27, C29, C32

Characteristic resistance of an anchor group under shear loading without and with edge influence: Annex B13

Characteristic edge distance and spacing: See appendix, especially annexes B13, C4, C6, C8, C10, C12, C14, C16, C18, C20, C22, C24, C26, C28, C30

Minimum edge distance and spacing: See appendix, especially annexes B13, C4, C6, C8, C10, C12, C14, C16, C18, C20, C22, C24, C26, C28, C30

Group factor under tension and shear loading: See appendix, especially annexes B13, C4, C6, C8, C10, C12, C14, C16, C18, C20, C22, C24, C26, C28, C31

Minimum member thickness: Annex B2

Durability: Annexes A5, B2

Displacements : Annex C33

##### **Safety in case of fire (BWR 2)**

Reaction to fire: Class (A1)

##### **Hygiene, health and the environment (BWR 3)**

Content, emission and/or release of dangerous substances: NPD

8. Appropriate Technical Documentation and/or Specific Technical Documentation: **-**

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Dr. Oliver Geibig, Managing Director Business Units & Engineering  
Tumlingen, 2022-10-18

Jürgen Grün, Managing Director Chemistry & Quality

This DoP has been prepared in different languages. In case there is a dispute on the interpretation the English version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

## Specific Part

### 1 Technical description of the product

The fischer Injection system FIS AB for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with fischer injection mortar FIS AB, FIS AB Low Speed or FIS AB High Speed, a perforated sleeve FIS H K and an anchor rod with hexagon nut and washer or an internal threaded anchor FIS E. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values for resistance	See Annexes B 13, C 1 to C 33
Displacements	See Annex C 33
Durability	See annex B 2

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

#### 3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

### 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330076-00-0604 the applicable European legal act is: [97/177/EC].

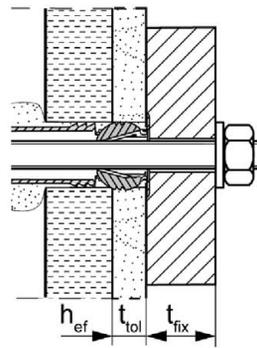

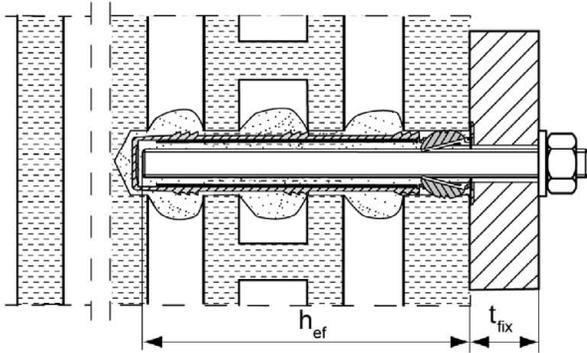

The system to be applied is: 1

# Installation conditions part 1

## Anchor rods with perforated sleeve FIS H K; Installation in perforated and solid brick masonry

### Pre-positioned anchorage:

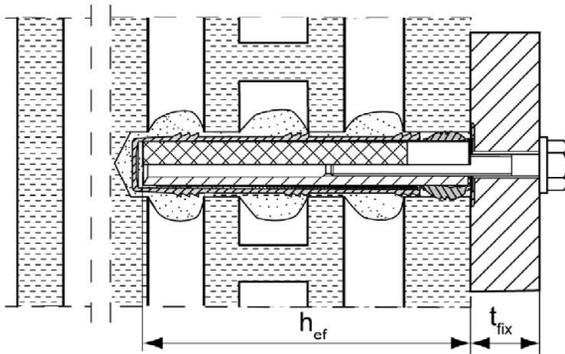

### Installation with render bridge

Size of the perforated sleeve:	FIS H 12x85 K	FIS H 16x130 K	FIS H 20x130 K
	FIS H 16x85 K	FIS H 20x85 K	FIS H 20x200 K

## Internal threaded anchor FIS E with perforated sleeve FIS H K; Installation in perforated and solid brick masonry

### Pre-positioned anchorage:

Figures not to scale

$h_{ef}$  = effective anchorage depth

$t_{tol}$  = thickness of unbearing layer (e.g. plaster)

$t_{fix}$  = thickness of fixture

Appendix 3 / 52

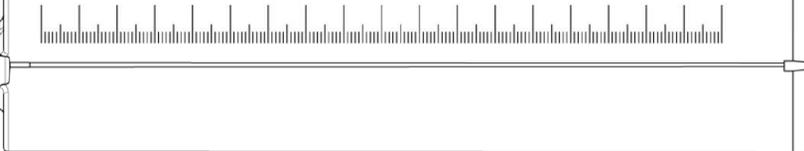

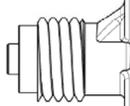

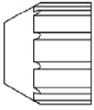

# Overview system components part 1

## Mortar cartridge (shuttle cartridge) with sealing cap

1

Sizes: 360 ml, 825 ml

**Imprint:** FIS AB or FIS AB Low Speed or FIS AB High Speed, processing notes, shelf-life, hazard code, piston travel scale (optional), curing time and processing time (depending on temperature), size, volume

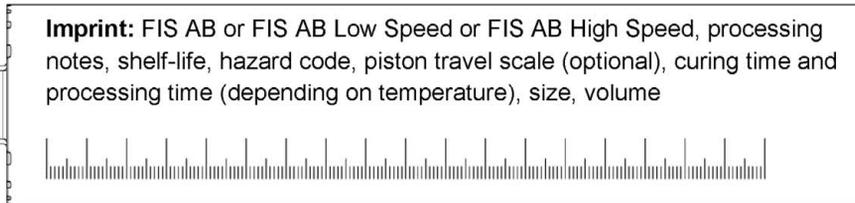

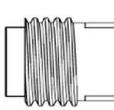

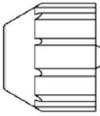

## Mortar cartridge (coaxial cartridge) with sealing cap

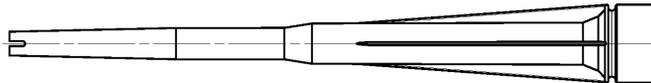

1

Sizes: 100 ml, 150 ml, 300 ml, 380 ml, 400 ml, 410 ml

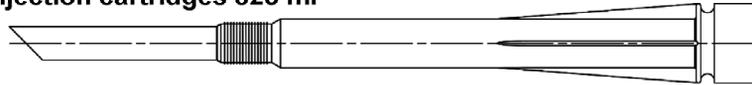

**Imprint:** FIS AB or FIS AB Low Speed or FIS AB High Speed, processing notes, shelf-life, hazard code, piston travel scale (optional), curing time and processing time (depending on temperature), size, volume

## Static mixer FIS MR Plus for injection cartridges up to 410 ml

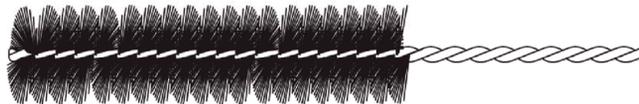

## Static mixer FIS JMR for injection cartridges 825 ml

## Extension tube Ø 9 for static mixer FIS MR Plus; Extension tube Ø 9 or Ø 15 for static mixer FIS JMR

## Cleaning brush BS

## Blow-out pump AB-G

## compressed-air cleaning tool

fischer injection system FIS AB for masonry

## Specifications of intended use part 2

### Anchorage subject to:

- Static and quasi-static loads

### Base materials:

- Solid brick masonry (base material group b) and autoclaved aerated concrete (base material group d), acc. to Annex B 10
- Hollow brick masonry (base material group c), according to Annex B 10
- For minimum thickness of masonry member  $h_{ef}+30\text{mm}$  applies
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2016
- For other bricks in solid masonry, hollow or perforated masonry and autoclaved aerated concrete, the characteristic resistance of the anchor may be determined by job site tests according to EOTA Technical Report TR 053:2016-04, Annex B under consideration of the  $\beta$ -factor according to Annex C 33, Table C33.1

Note (only applies to solid bricks and autoclaved aerated concrete):

The characteristic resistance is also valid for larger brick sizes, higher compressive strength and higher raw density of the masonry unit.

### Temperature Range:

- **Tb:** From - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)

### Use conditions (Environmental conditions):

- **X1:** Structures subject to dry internal conditions exist  
(zinc coated steel, stainless steel or high corrosion resistant steel)
- **X2:** Structures subject to external atmospheric exposure including industrial and marine environment or exposure to permanently damp internal condition, if no particularly aggressive conditions exist  
(stainless steel or high corrosion resistant steel)
- **X3:** Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particularly aggressive conditions exist (high corrosion resistant steel)

Note: Particularly aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

**Intended Use**  
Specifications part 2

**Annex B 2**

Appendix 8 / 52

## Specifications of intended use part 2 continued

### Design:

- The anchorages have to be designed in accordance with EOTA Technical Report TR 054:2016-04, Design method A under the responsibility of an engineer experienced in anchorages and masonry work.

Applies to all bricks, if no other values are specified:

$$N_{Rk} = N_{Rk,b} = N_{Rk,p}$$

$$V_{Rk} = V_{Rk,b} = V_{Rk,c}$$

For the Calculation of pulling out a brick under tension loading  $N_{Rk,pb}$  or

pushing out a brick under shear loading  $V_{Rk,pb}$  see EOTA Technical Report TR 054:2016-04.

$N_{Rk,s}$ ,  $V_{Rk,s}$  and  $M^0_{Rk,s}$  see annex C1-C3

Factors for job site tests and displacements see Annex C 33

- Verifiable calculation notes and drawings have to be prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.

### Installation:

- Condition d/d: - Installation and use in dry structures
- Condition w/w: - Installation and use in dry and wet structures
- Condition w/d: - Installation in wet structures and use in dry structures
- Hole drilling see Annex C (drilling method)
- In case of aborted hole: The hole shall be filled with mortar
- Bridging of unbearing layer (e.g. plaster) at perforated brick masonry see Annex B 6, Table B6.1
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Fastening screws or anchor rods (including nut and washer) must comply with the appropriate material and property class of the internal threaded anchor FIS E.
- minimum curing time see Annex B 7, Table B7.2
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

Material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A 5, Table 5.1

Conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored

Marking of the anchor rod with the envisage embedment depth. This may be done by the manufacturer of the rod or by a person on job site

# Installation instruction part 1

## Installation in solid brick and autoclaved aerated concrete (without perforated sleeve)

1		<p>Drill the hole (drilling method see Annex C of the respective brick) depth of drill hole <math>h_0</math> and drill hole diameter <math>d_0</math> see <b>Table B4.1; B5.1</b></p>	
2			 <p>Blow out the drill hole twice. Brush twice and blow out twice again.</p>
3		<p>Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)</p>	
4		<p>Place the cartridge into a suitable dispenser</p>	 <p>Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.</p>
5		<p>Fill approximately 2/3 of the drill hole with mortar beginning from the bottom of the hole<sup>1)</sup>. Avoid bubbles!</p>	 <p>For push through anchorage (not FIS E) fill the annular clearance with mortar.</p>
6		<p>Only use clean and oil-free metal parts. Mark the anchor rod for setting depth. Insert the anchor rod or internal threaded anchor FIS E by hand using light turning motions. When reaching the setting depth marking, excess mortar must emerge from the mouth of the drill hole.</p>	
7		<p>Do not touch. Minimum curing time see <b>Table B7.2</b></p>	 <p>Mounting the fixture. max <math>T_{inst}</math> see parameter of brick in Annex C.</p>

<sup>1)</sup> Exact volume of mortar see manufacturer's specification.

fischer injection system FIS AB for masonry

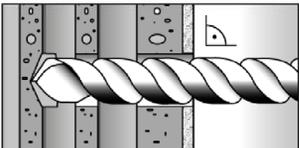

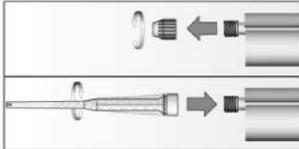

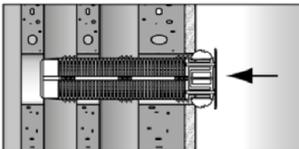

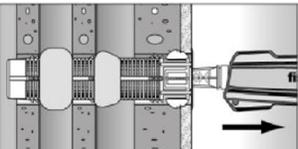

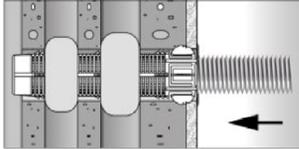

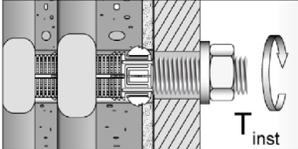

**Intended use**  
Installation instruction (without perforated sleeve) part 1

**Annex B 8**

Appendix 14 / 52

## Installation instruction part 2

### Installation in perforated or solid brick with perforated sleeve (pre-positioned anchorage)

1		<p>Drill the hole (drilling method see Annex C of the respective brick). depth of drill hole <math>h_0</math> and drill hole diameter <math>d_0</math> see <b>Table B6.1</b></p>	<p>When install perforated sleeves in solid bricks or solid areas of hollow bricks, also clean the hole by blowing out and brushing.</p>	
2		<p>Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)</p>		
3		<p>Place the cartridge into a suitable dispenser.</p>		<p>Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.</p>
4		<p>Insert the perforated sleeve flush with the surface of the masonry or plaster.</p>		<p>Fill the perforated sleeve completely with mortar beginning from the bottom of the hole<sup>1)</sup>.</p>
5		<p>Only use clean and oil-free metal parts. Mark the anchor rod for setting depth. Insert the anchor rod or the internal threaded anchor FIS E by hand using light turning motions until reaching the setting depth marking (anchor rod) or flush with the surface (internal threaded anchor).</p>		
6		<p>Do not touch. Minimum curing time see <b>Table B8.2</b></p>		<p>Mounting the fixture. max <math>T_{inst}</math> see parameter of brick in Annex C.</p>

<sup>1)</sup> Exact volume of mortar see manufacturer's specification.

## Spacing and edge distance

\* Only, if vertical joints are not completely filled with mortar

$s_{min \parallel}$	=	Minimum spacing parallel to bed joint
$s_{min \perp}$	=	Minimum spacing vertical to bed joint
$s_{cr \parallel}$	=	Characteristic spacing parallel to bed joint
$s_{cr \perp}$	=	Characteristic spacing vertical to bed joint
$C_{cr} = C_{min}$	=	Edge distance
$\alpha_{g,N \parallel}$	=	Group factor for tension loading, anchor group parallel to bed joint
$\alpha_{g,V \parallel}$	=	Group factor for shear loading, anchor group parallel to bed joint
$\alpha_{g,N \perp}$	=	Group factor for tension loading, anchor group vertical to bed joint
$\alpha_{g,V \perp}$	=	Group factor for shear loading, anchor group vertical to bed joint

For  $s \geq s_{cr}$   $\alpha_g = 2$

For  $s_{min} \leq s < s_{cr}$   $\alpha_g$  according to installation parameters of brick

$$N_{Rk}^g = \alpha_{g,N} \cdot N_{Rk}; \quad V_{Rk}^g = \alpha_{g,V} \cdot V_{Rk} \quad (\text{Group of 2 anchors})$$

$$N_{Rk}^g = \alpha_{g,N \parallel} \cdot \alpha_{g,N \perp} \cdot N_{Rk}; \quad V_{Rk}^g = \alpha_{g,V \parallel} \cdot \alpha_{g,V \perp} \cdot V_{Rk} \quad (\text{Group of 4 anchors})$$
