

DECLARATION OF PERFORMANCE

DoP 0354

for fischer injection system FIS V Plus (Metal injection anchors for use in masonry)

EN

1. Unique identification code of the product-type: **DoP 0354**
2. Intended use/es: **Post-installed fastening in masonry units, see appendix, especially annexes B1 - B22.**
3. Manufacturer: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Germany**
4. Authorised representative: **-**
5. System/s of AVCP: **1**
6. European Assessment Document: **EAD 330076-01-0604, Edition 10/2022**
 European Technical Assessment: **ETA-20/0729; 2023-10-31**
 Technical Assessment Body: **DIBt- Deutsches Institut für Bautechnik**
 Notified body/ies: **2873 TU Darmstadt**
7. Declared performance/s:
Mechanical resistance and stability (BWR 1)
 Characteristic resistance for static and quasi-static loading:
 1 Characteristic resistance to steel failure of a single anchor under tension loading: See appendix, especially annexes C1, C3
 2 Characteristic resistance to steel failure of a single anchor under shear loading with and without level arm: See appendix, especially annexes C2, C3
 3 Characteristic resistance to pull-out failure or brick breakout failure of a single anchor under tension loading, Reduction factor: See appendix, especially annexes C5, C7, C9, C11, C13, C15, C17, C19, C22, C26, C29, C31, C34, C38, C42, C46, C50, C54, C58, C62, C65, C67, C70, C74, C78, C82, C85, C88, C92, C95, C97, C100, C103, C106, C109, C112, C115, C117, C120, C122, C123
 4 Characteristic resistance to local brick failure or brick breakout failure of a single anchor under shear loading: See appendix, especially annexes C5, C7, C9, C11, C13, C15, C17, C19, C23, C27, C29, C31, C35, C39, C43, C47, C51, C55, C59, C63, C65, C68, C71, C75, C79, C83, C85, C89, C93, C95, C97, C101, C103, C107, C109, C113, C115, C117, C120, C122
 5 Characteristic resistance to brick breakout failure of an anchor group under tension loading: See appendix, especially annexes B21, B22, C4, C6, C8, C10, C12, C14, C16, C18, C20, C21, C24, C25, C28, C30, C32, C33, C36, C37, C40, C41, C44, C45, C48, C49, C52, C53, C56, C57, C60, C61, C64, C66, C69, C72, C73, C76, C77, C80, C81, C84, C86, C87, C90, C91, C94, C96, C98, C99, C102, C104, C105, C108, C110, C111, C114, C116, C119, C121
 6 Characteristic resistance to local brick failure or brick breakout failure of an anchor group under shear loading: See appendix, especially annexes B21, B22, C4, C6, C8, C10, C12, C14, C16, C18, C20, C21, C24, C25, C28, C30, C32, C33, C36, C37, C40, C41, C44, C45, C48, C49, C52, C53, C56, C57, C60, C61, C64, C66, C69, C72, C73, C76, C77, C80, C81, C84, C86, C87, C90, C91, C94, C96, C98, C99, C102, C104, C105, C108, C110, C111, C114, C116, C119, C121
 7 Edge distances, spacing, member thickness: See appendix, especially annexes B21, B22, C4, C6, C8, C10, C12, C14, C16, C18, C20, C21, C24, C25, C28, C30, C32, C33, C36, C37, C40, C41, C44, C45, C48, C49, C52, C53, C56, C57, C60, C61, C64, C66, C69, C72, C73, C76, C77, C80, C81, C84, C86, C87, C90, C91, C94, C96, C98, C99, C102, C104, C105, C108, C110, C111, C114, C116, C118, C121
 8 Displacements under tension and shear loading: see appendix, especially annex C123
 9 Maximum installation torque: See appendix, especially annexes B4-B7, B9-B12, C4, C6, C8, C10, C12, C14, C16, C18, C20, C21, C24, C25, C28, C30, C32, C33, C36, C37, C40, C41, C44, C45, C48, C49, C52, C53, C56, C57, C60, C61, C64, C66, C69, C72, C73, C76, C77, C80, C81, C84, C86, C87, C90, C91, C94, C96, C98, C99, C102, C104, C105, C108, C110, C111, C114, C116, C118, C121
 Characteristic resistance and displacements for seismic loading:
 10 Resistance to tension load, displacements: NPD
 11 Resistance to shear load, displacements: NPD
 12 Factor annular gap: NPD
- Safety in case of fire (BWR 2)**
 13 Reaction to fire: Class (A1)
 14 Resistance to fire under tension and shear loading with and without level arm, minimum edge distances and spacing: see appendix, especially annex C124

Hygiene, health and the environment (BWR 3)

- 15 Content, emission and/or release of dangerous substances: NPD

8. Appropriate Technical Documentation and/or Specific Technical Documentation: **-**

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Dr.-Ing. Oliver Geibig, Managing Director Business Units & Engineering
 Tumlingen, 2023-11-14

Jürgen Grün, Managing Director Chemistry & Quality

This DoP has been prepared in different languages. In case there is a dispute on the interpretation the English version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

Mechanical resistance and stability (BWR 1)		
Characteristic resistance for static and quasi-static loading:		
1	Characteristic resistance to steel failure of a single anchor under tension loading:	$N_{Rk,s}$ [kN]
2	Characteristic resistance to steel failure of a single anchor under shear loading with and without level arm:	$V_{Rk,s}$ [kN], $M^0_{Rk,s}$ [Nm]
3	Characteristic resistance to pull-out failure or brick breakout failure of a single anchor under tension loading, Reduction factor:	$N_{Rk,p}$, $N_{Rk,b}$ [kN] $N_{Rk,p,c}$, $N_{Rk,b,c}$ [kN], β [-]
4	Characteristic resistance to local brick failure or brick breakout failure of a single anchor under shear loading:	$V_{Rk,b}$, $V_{Rk,c,II}$, $V_{Rk,c,I}$ [kN]
5	Characteristic resistance to brick breakout failure of an anchor group under tension loading:	N^0_{Rk} [kN], $\alpha_{g,N}$ [-]
6	Characteristic resistance to local brick failure or brick breakout failure of an anchor group under shear loading:	$V^0_{Rk,b}$, $V^0_{Rk,c,II}$, $V^0_{Rk,c,I}$ [kN]; $\alpha_{g,V,II}$, $\alpha_{g,V,I}$ [-]
7	Edge distances, spacing, member thickness:	c_{cr} , s_{cr} , c_{min} , $s_{min,II}$, $s_{min,I}$, h_{min} [mm]
8	Displacements under tension and shear loading:	δ_{N0} , $\delta_{N\infty}$, δ_{V0} , $\delta_{V\infty}$ [mm]
9	Maximum installation torque:	max. T_{inst} [Nm]
Characteristic resistance and displacements for seismic loading:		
10	Resistance to tension load, displacements:	$N_{Rk,s,eq}$, $N_{Rk,eq}$ [kN], $\alpha_{N,seis}$ [-], $\delta_{N,eq}$ [mm]
11	Resistance to shear load, displacements:	$V_{Rk,s,eq}$, $V_{Rk,b,eq}$ [kN], $\alpha_{V,seis}$ [-], $\delta_{V,eq}$ [mm]
12	Factor annular gap:	α_{gap} [-]
Safety in case of fire (BWR 2)		
13	Reaction to fire:	-
14	Resistance to fire under tension and shear loading with and without level arm, minimum edge distances and spacing:	$N_{Rk,s,fi}$, $N_{Rk,p,fi}$ [kN], $N_{Rk,b,fi}$, $V_{Rk,s,fi}$ [kN], $M^0_{Rk,s}$ [Nm], $c_{cr,fi}$, $s_{cr,fi}$ [mm]
Hygiene, health and the environment (BWR 3)		
15	Content, emission and/or release of dangerous substances:	-

Specific Part

1 Technical description of the product

The fischer injection system FIS V Plus for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar fischer FIS V Plus, FIS VS Plus Low Speed and FIS VW Plus High Speed, a perforated sieve sleeve and an anchor rod with hexagon nut and washer or an internal threaded rod in the range of M6 to M16. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for static and quasi-static loading	See Annexes B 4 to B 7, B 21, B 22, C 1 to C 123
Characteristic resistance and displacements for seismic loading	No performance assessed

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire under tension and shear loading with and without lever arm. Minimum edge distances and spacing	See Annex C 124

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330076-01-0604 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

Installation conditions part 1

Anchor rods with perforated sleeve FIS H K; Installation in perforated and solid brick masonry

Pre-positioned anchorage:

Installation with render bridge

Size of the perforated sleeve:

FIS H 12x50 K	FIS H 16x85 K	FIS H 20x85 K	FIS H 20x200 K
FIS H 12x85 K	FIS H 16x130 K	FIS H 20x130 K	

Push through anchorage:

Installation with render bridge

Size of the perforated sleeve:

FIS H 18x130/200 K	FIS H 22x130/200 K
--------------------	--------------------

Internal threaded anchor FIS E with perforated sleeve FIS H K; Installation in perforated and solid brick masonry

Pre-positioned anchorage:

Figures not to scale

h_{ef} = effective anchorage depth

t_{tol} = thickness of unbearing layer (e.g. plaster)

t_{fix} = thickness of fixture

Installation conditions part 1,
Anchor rods and internal threaded anchor with perforated sleeve

Annex A 1

Appendix 3 / 153

Installation conditions part 2

**Anchor rods without perforated sleeve FIS H K;
installation in solid brick masonry and autoclaved aerated concrete**

Pre-positioned anchorage:

Push through anchorage: Annular gap filled with mortar

Installation with
render bridge

**Internal threaded anchors FIS E without perforated sleeve FIS H K;
installation in solid brick masonry and autoclaved aerated concrete**

Pre-positioned anchorage:

Installation with render bridge

Anchor rods and internal threaded anchors FIS E without perforated sleeve FIS H K; installation with centring sleeve in autoclaved aerated concrete with conical drill hole (installation with special conic drill bit PBB)

Pre-positioned anchorage:

anchor rods M8, M10, M12

Pre-positioned anchorage:

Internal threaded anchor FIS E 11x85 M6 / M8

Figures not to scale

h_0 = depth of drill hole

h_{ef} = effective anchorage depth

t_{tol} = thickness of unbearing layer (e.g. plaster)

t_{fix} = thickness of fixture

Overview system components part 1

Mortar cartridge (shuttle cartridge) with sealing cap

1

Size: 360 ml, 825 ml

Imprint: fischer FIS V Plus or FIS VS Plus Low Speed or FIS VW Plus High Speed, processing notes, shelf-life, hazard code, piston travel scale (optional), curing time and processing time (depending on temperature), size, volume

Mortar cartridge (coaxial cartridge) with sealing cap

1

Size: 100 ml, 150 ml, 300 ml, 380 ml, 400 ml, 410 ml

Imprint: fischer FIS V Plus or FIS VS Plus Low Speed or FIS VW Plus High Speed, processing notes, shelf-life, hazard code, piston travel scale (optional), curing time and processing time (depending on temperature), size, volume

Static mixer FIS MR Plus for injection cartridges up to 410 ml

Static mixer FIS JMR for injection cartridges 825 ml

Extension tube Ø 9 for static mixer FIS MR Plus;
Extension tube Ø 9 or Ø 15 for static mixer FIS JMR

Cleaning brush BS

Blow-out pump AB-G

compressed-air cleaning tool

Intended Use Specifications part 1			

Specifications of intended use part 2

Anchorage subject to:

- Static and quasi-static loads
- Resistance to fire under tension and shear loading

Base materials:

- Solid brick masonry (base material group b) and autoclaved aerated concrete (base material group d), acc. to Annex B 13 / B 14.
- Hollow brick masonry (base material group c), according to Annex B 13 / B 14
- For minimum thickness of masonry member is $h_{ef}+30\text{mm}$
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2016
- For other bricks in solid masonry, hollow or perforated masonry and autoclaved aerated concrete, the characteristic resistance of the anchor may be determined by job site tests (not for bricks under fire exposure) according to EOTA Technical Report TR 053:2022-07, Annex B under consideration of the β -factor according to Annex C 123, Table C123.1.

Note (only applies to solid bricks and autoclaved aerated concrete):
The characteristic resistance is also valid for larger brick sizes, higher compressive strength and higher raw density of the masonry unit.

Temperature Range:

- **Tb:** From - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)
- **Tc:** From -40°C to +120°C (max. short term temperature +120°C and max. long term temperature +72°C)

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc plated steel, stainless steel or high corrosion resistant steel)
- For all other conditions according to EN 1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 5, Table A5.1.

fischer injection system FIS V Plus for masonry	Annex B 2 Appendix 9 / 153
Intended Use Specifications part 2	

Specifications of intended use part 2 continued

Design:

- The anchorages have to be designed in accordance with EOTA Technical Report TR 054:2022-07 (included the dimensioning for fire exposure), Design method A under the responsibility of an engineer experienced in anchorages and masonry work.

Applies to all bricks, if no other values are specified:

$$N_{RK} = N_{RK,b} = N_{RK,p} = N_{RK,b,c} = N_{RK,p,c}$$

$$V_{RK} = V_{RK,b} = V_{RK,c,II} = V_{RK,c,\perp}$$

For the calculation of pulling out a brick under tension loading $N_{RK,pb}$ or pushing out a brick under shear loading $V_{RK,pb}$ see EOTA Technical Report TR 054:2022-07.

$N_{RK,s}$, $V_{RK,s}$ and $M^0_{RK,s}$ see annexes C 1-C 3

Factors for job site tests and displacements see annex C 123.

- Verifiable calculation notes and drawings have to be prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.

Installation:

- Conditions d/d: - Installation and use in dry structures.
- Conditions w/w: - Installation and use in dry and wet structures.
- Conditions w/d: - Installation in wet structures and use in dry structures.
- Hole drilling see Annex C (drilling method).
- In case of aborted hole: The hole shall be filled with mortar.
- Bridging of unbearing layer (e.g., plaster) masonry with solid bricks and cylindrical drill hole. At perforated brick masonry see Annex B 6, Table B6.1.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Fastening screws or anchor rods (including nut and washer) must comply with the appropriate material and property class of the fischer internal threaded anchor FIS E.
- Minimum curing time see Annex B 8, Table B8.2.
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

Material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A 5, Table A5.1

Conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored.

Marking of the anchor rod with the envisage embedment depth. This may be done by the manufacturer of the rod or by a person on job site.

Installation instruction part 1

Installation in solid brick and autoclaved aerated concrete (without perforated sleeve)

1		Drill the hole (drilling method see Annex C of the respective brick) depth of drill hole h_0 and drill hole diameter d_0 see Table B4.1; B5.1		
2				Blow out the drill hole twice. Brush twice and blow out twice again.
3		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible).		
4		Place the cartridge into a suitable dispenser		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
5		Fill approximetly 2/3 of the drill hole with mortar beginning from the bottom of the hole ¹⁾ . Avoid bubbles!		For push through anchorage fill the annular clearance with mortar.
6		Only use clean and oil-free metal parts. Mark the anchor rod for setting depth. Insert the anchor rod or internal threaded anchor FIS E by hand using light turning motions. When reaching the setting depth marking, excess mortar must emerge from the mouth of the drill hole.		
7		Do not touch. Minimum curing time see Table B8.2		Mounting the fixture. max T_{inst} see parameter of brick in Annex C .

¹⁾ Exact volume of mortar see manufacturer's specification.

Intended Use

Installation instruction (without perforated sleeve) part 1

Annex B 9

Appendix 16 / 153

Installation instruction part 2

Installation in perforated or solid brick with perforated sleeve (pre-positioned anchorage)

1		Drill the hole (drilling method see Annex C of the respective brick). depth of drill hole h_0 and drill hole diameter d_0 see Table B6.1	When install perforated sleeves in solid bricks or solid areas of hollow bricks, also clean the hole by blowing out and brushing.	
2		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible).		
3		Place the cartridge into a suitable dispenser.		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
4		Insert the perforated sleeve flush with the surface of the masonry or plaster.		Fill the perforated sleeve completely with mortar beginning from the bottom of the hole ¹⁾ .
5		Only use clean and oil-free metal parts. Mark the anchor rod for setting depth. Insert the anchor rod or the internal threaded anchor FIS E by hand using light turning motions until reaching the setting depth marking (anchor rod) or flush with the surface (internal threaded anchor).		
6		Do not touch. Minimum curing time see Table B8.2		Mounting the fixture. max T_{inst} see parameter of brick in Annex C .

¹⁾ Exact volume of mortar see manufacturer's specification.

fischer injection system FIS V Plus for masonry

Intended Use
Installation instruction (with perforated sleeve) part 2

Annex B 10

Appendix 17 / 153

Installation instruction part 3

Installation in perforated or solid brick with perforated sleeve (push through anchorage)

1		Push the movable stop up to the correct thickness of fixture and cut the overlap.		Drill the hole through the fixture. Depth of drill hole ($h_0 + t_{fix}$) and drill hole diameter see Table B7.1 .
2		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible).		
3		Place the cartridge into a suitable dispenser.		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
4		Insert the perforated sleeve flush with the surface of the fixture into the drill hole.		Fill the sleeve with mortar beginning from the bottom of the hole. ¹⁾ For deep drill holes use an extension tube.
5		Only use clean and oil-free metal parts. Mark the anchor rod for setting depth. Insert the anchor rod or the internal threaded anchor FIS E by hand using light turning motions until reaching the setting depth marking (anchor rod) or flush with the surface (internal threaded anchor).		
6		Do not touch. Minimum curing time see Table B8.2 .		Mounting the fixture. max T_{inst} see parameter of brick in Annex C .

¹⁾ Exact volume of mortar see manufacturer's specification.

fischer injection system FIS V Plus for masonry

Intended Use
Installation instruction (with perforated sleeve) part 3

Annex B 11

Appendix 18 / 153

Installation instruction part 4

Installation in autoclaved aerated concrete with special conic drill bit PBB (pre-positioned anchorage)

1		Position the movable drill bit arrester on the used drill hole depth (see Table B4.1). For this, unlock the clamp screw and slide the arrester. Now fix the clamp screw.		
2		Drill the cylindrical hole with rotating drill until the arrester contact the material surface (drilling method see Annex C of the respective brick).		
3		Deviate the working power drill circulate to generate an conic undercut in the material.		
4		Blow out the drill hole four times.		
5		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible).		
6		Place the cartridge into a suitable dispenser.		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
7		Put the center sleeve into the drill hole and adapt the injection adapter onto the static mixer.		Fill the drill hole with injection mortar.
8			Only use clean and oil-free metal parts. Mark the anchor rod for setting depth. Insert the anchor rod or internal threaded anchor FIS E by hand using light turning motions. When reaching the setting depth marking, excess mortar must emerge from the mouth of the drill hole.	
9		Do not touch. Minimum curing time see Table B8.2 .		Mounting the fixture. max T_{inst} see parameter of brick in Annex C .

Table C124.1: Fire resistance under tension and shear loading

Characteristic resistance to failure under tension loading

Characteristic resistance to failure under shear loading ²⁾

with lever arm

General installation Parameters

1) No performance assessed.

$$2) \quad \mathbf{V}_{Rk,b,fi} = \mathbf{N}_{Rk,b,fi}.$$

3) The compressive strength of the single brick must not be less than 80% of the mean compressive strength.

In absence of national regulations, the recommended partial factor $\gamma_{M,fi} = 1,0$.

Performance
