DECLARATION OF PERFORMANCE

DoP 0349

for fischer injection system Superbond (Bonded fastener for use in concrete)

DoP 0349

1. <u>Unique identification code of the product-type:</u> **DoP 0349**

2. Intended use/es: Post-installed fastening in cracked or uncracked concrete, see appendix, especially

annexes B1 - B17.

3. Manufacturer: fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Germany

4. Authorised representative:

5. System/s of AVCP: 1

6. European Assessment Document: EAD 330499-01-0601, Edition 04/2020

European Technical Assessment: ETA-12/0258; 2023-10-24

Technical Assessment Body: DIBt- Deutsches Institut für Bautechnik

Notified body/ies: 2873 TU Darmstadt

7. Declared performance/s:

Mechanical resistance and stability (BWR 1)

Characteristic resistance to tension load (static and quasi-static loading):

Resistance to steel failure: Annexes C1 - C3

Resistance to combined pull- out and concrete cone failure: Annexes C4-C10

Resistance to concrete cone failure: Annex C4 Edge distance to prevent splitting under load: Annex C4

Robustness: Annexes C4-C10

Maximum installation torque: Annexes B4-B6,B8 Minimum edge distance and spacing: Annexes B4 - B8

Characteristic resistance to shear load (static and quasi-static loading):

Resistance to steel failure: Annexes C2, C3 Resistance to pry-out failure: Annex C4 Resistance to concrete edge failure: Annex C4

Displacements under short-term and long-term loading:

Displacements under short-term and long-term loading: Annexes C11, C12

Characteristic resistance and displacements for seismic performance categories C1 and C2:

Resistance to tension load, displacements, category C1: Annexes C13 - C15 Resistance to tension load, displacements, category C2: Annexes C13, C16 Resistance to shear load, displacements, category C1: Annexes C13, C14 Resistance to shear load, displacements, category C2: Annexes C13, C16

Factor annular gap: Annex C13

Hygiene, health and the environment (BWR 3)

Content, emission and/or release of dangerous substances: NPD

Appropriate Technical Documentation and/or Specific Technical Documentation:

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Dr.-Ing. Oliver Geibig, Managing Director Business Units & Engineering

Tumlingen, 2023-11-17

Jürgen Grün, Managing Director Chemistry & Quality

This DoP has been prepared in different languages. In case there is a dispute on the interpretation the English version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

Fischer DATA DOP_ECs_V92.xlsm Appendix 0

Specific Part

1 Technical description of the product

The injection system fischer Superbond is a bonded anchor for use in concrete consisting of a cartridge with injection mortar fischer FIS SB or a resin capsule fischer RSB and a steel element according to Annex A 5.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The resin capsule is placed into a drilled hole and the steel element is driven by rotary hammer drill or tangential impact screw driver or cordless drill screw driver. The anchor rod is anchored via the bond between steel element, chemical mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex B 4 to B 8, C 1 to C 10
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 to C 4
Displacements under short-term and long-term loading	See Annex C 11 and C 12
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 13 to C 16

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

fischer Superbond	
Intended use Specifications part 2, fischer resin capsule system RSB	Annex B 2 Appendix 11 / 42

Specifications of intended use part 3

Base materials:

 Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
 (zinc coated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN1993-1-4:2006+A1:2015 corresponding to corrosion resistance classes to Annex A 7 Table A7.1.

Design

- Fastenings have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored.
 The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Fastenings are designed in accordance with:
 EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- · In case of aborted hole: The hole shall be filled with mortar.
- Fastening depth should be marked and adhered to on installation.
- Overhead installation is allowed (necessary equipment see installation instruction).

Installation instructions part 1; Injection mortar system FIS SB

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1

Drill the hole

Nominal drill hole diameter d_0 and drill hole depth h_0 see Tables B4.1, B6.1, B7.1, B8.1.

2

Clean the drill hole:

Blow out the drill hole twice, with oil free compressed air ($p \ge 6$ bar) In uncracked concrete the use of the manual blow-out pump ABG is possible (Installation parameters: $d_0 < 18$ mm and $h_{ef} < 10d$)

3

Brush the drill hole twice. For drill hole diameter ≥ 30 mm use a power drill. For deep holes use an extension. Corresponding brushes see **Table B11.1**.

4

Clean the drill hole:

Blow out the drill hole twice, with oil free compressed air ($p \ge 6$ bar) In uncracked concrete the use of the manual blow-out pump ABG is possible (Installation parameters: $d_0 < 18$ mm and $h_{ef} < 10d$)

Go to step 5 (Annex B 12)

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1

Check a suitable hollow drill (see **Table B1.1**) for correct operation of the dust extraction.

2

Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.

Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter **d**₀ and drill hole depth **h**₀ see **Tables B4.1**, **B6.1**, **B7.1**, **B8.1**.

Go to step 5 (Annex B 12)

fischer Superbond

Intended use

Installation instructions part 1; injection mortar system FIS SB

Annex B 12

Appendix 21 / 42

Installation instructions part 2; injection mortar system FIS SB

Preparing the cartridge

5

Remove the sealing cap

Screw on the static mixer (the spiral in the static mixer must be clearly visible).

6

Place the cartridge into the dispenser.

7

Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey.

Injection of the mortar

8

For h_0 = $h_{\rm ef}$ fill approximately 2/3 of the drill hole with mortar. For h_0 > $h_{\rm ef}$ more mortar is needed. Always begin from the bottom of the hole and avoid bubbles.

The conditions for mortar injection without extension tube can be found in **Table B11.2.**

For deeper drill holes, than those mentioned in **Table B11.2**, use a suitable extension tube.

For overhead installation, deep holes ($h_0 > 250$ mm) or drill hole diameter ($d_0 \ge 30$ mm) use an injection-adapter.

Go to step 9 (Annex B 13)

fischer Superbond

Intended use

Installation instructions part 2; injection mortar system FIS SB

Annex B 13

Appendix 22 / 42

Installation instructions part 3; injection mortar system FIS SB

Installation of anchor rods or fischer internal threaded anchors RG M I

9

Only use clean and oil-free metal part.

Mark the setting depth of the metal part. Push the anchor rod or fischer internal threaded RG M I anchor down to the bottom of the hole, turning it slightly while doing so.

After inserting the metal part, excess mortar must be emerged around the anchor element. If not, pull out the metal part immediately and reiniect mortar.

9a

For overhead installations support the metal part with wedges.

(e. g. fischer centering wedges).

For push through installation fill the annular gap with mortar.

10

Wait for the specified curing time t_{cure} see **Table B11.3**.

11

Mounting the fixture max T_{inst} see **Tables B4.1** and **B6.1**.

Option

After the minimum curing time is reached, the gap between metal part and fixture (annular clearance) may be filled with mortar via the fischer filling disc. Compressive strength ≥ 50 N/mm² (e.g. fischer injection mortars FIS HB, FIS SB, FIS V, FIS EM Plus).

ATTENTION: Using fischer filling disc reduces t_{fix} (usable length of the anchor).

Installation reinforcing bars and fischer rebar anchor FRA

9

Only use clean and oil-free reinforcing bars or fischer FRA. Mark the setting depth. Turn while using force to push the reinforcement bar or the fischer FRA into the filled hole up to the setting depth mark.

When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole. If not, pull out the anchor element immediately and reinject mortar.

10

Wait for the specified curing time t_{cure} see **Table B11.3**.

11

Mounting the fixture max T_{inst} see **Table B8.1**.

fischer Superbond

Intended use

Installation instructions part 3; injection mortar system FIS SB

Annex B 14

Appendix 23 / 42

Installation instructions part 4; resin capsule RSB

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1

Drill the hole.

Nominal drill hole diameter d_0 and drill hole depth h_0 see **Tables B5.1** and **B6.1**

2

Clean the drill hole:

Blow out the drill hole four times, with oil free compressed air ($p \ge 6$ bar) In uncracked concrete the use of the manual blow-out pump ABG is possible (Installation parameters: $d_0 < 18$ mm and $h_{ef} < 10d$)

Go to step 6 (Annex B 16)

Drilling and cleaning the hole (wet drilling with diamond drill bit)

1

Drill the hole.

Drill hole diameter d₀ and drill hole depth h₀ see Tables B5.1 and B6.1

Break the drill core and remove it.

2

Flush the drill hole with clean water until it flows clear.

3

Blow out the drill hole twice, using oil-free compressed air (p > 6 bar).

4

Brush the drill hole twice using a power drill. Corresponding brushes see **Table B11.1**.

5

Blow out the drill hole twice, using oil-free compressed air (p > 6 bar).

Go to step 6 (Annex B 16)

fischer Superbond

Intended use

Installation instructions part 4; resin capsule RSB

Annex B 15

Appendix 24 / 42

Installation instructions part 5; resin capsule RSB

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

Check a suitable hollow drill (see **Table B2.1**) for correct operation of the dust extraction.

2

Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.

Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter **d**₀ and drill hole depth **h**₀ see **Tables B5.1** and **B6.1**

Go to step 6 (Annex B 16)

Installation fischer anchor rod RG M or fischer internal threaded anchor RG M I

6

Insert the resin capsule into the drill hole by hand. Suitable resin capsule RSB or RSB mini see **Table B9.2**.

Installation with rotary hammer

Only use clean and grease-free metal parts. Using a suitable adapter, drive the fischer anchor rod RG M or the fischer internal threaded anchor RG M I into the capsule using a rotary hammer on rotary hammer mode. Stop when the metal parts reaches the bottom of the hole and is set to the correct embedment depth.

fischer Superbond

Intended use

Installation instructions part 5; resin capsule RSB

Annex B 16

Appendix 25 / 42

Installation instructions part 6; resin capsule RSB

Installation fischer anchor rod RG M or fischer internal threaded anchor RG M I (continue)

Installation with cordless drill or tangential impact screwdriver (Specification according to step 7c)

7с

Only use clean and grease-free metal parts. Using a suitable adapter, drive the fischer anchor rod RG M or the fischer internal threaded anchor RG M I into the capsule using a cordless drill screwdriver (only drilling operation, torque = 0 - 32 Nm and idle speed = 0 - 450 revolutions per minute, e.g., FEIN ASB 18, 1st gear or equivalent power tool) or tangential impact screw driver (torque = 0 - 400 Nm and idle speed = 0-2.150 revolutions per minute; e.g. fischer FSS 18V 400BL, torque setting 12 or equivalent power tool).

Stop when the metal parts reaches the bottom of the hole and is set to the correct embedment depth.

8

When reaching the correct embedment depth, excess mortar must emerge from the mouth of the drill hole. If not, the metal parts must be pulled out directly and a second resin capsule must be pushed into the drill hole. Setting process must be repeated (Step 7).

9

Wait for the specified curing time, t_{cure} see **Table B11.3**.

10

Mounting the fixture max T_{inst} see **Tables B5.1** and **B6.1**.

fischer Superbond

Intended use

Installation instructions part 6; resin capsule RSB

fischer Superbond

Performances

Characteristic resistance to steel failure under tension / shear loading for fischer anchor rods and standard threaded rods under seismic action (performance category C1 / C2)

Annex C 13

Appendix 39 / 42

²⁾ Values in brackets are valid for undersized threaded rods with smaller stress area A_s for hot dip galvanized standard threaded rods according to EN ISO 10684:2004+AC:2009.

³⁾ Values in brackets are valid for filled annular gaps between the anchor rod and the through-hole in the attachment. It is necessary to use the fischer filling disc according to Annex A 1 and A 3.

⁴⁾ No performance assessed.

1) Calculation of effective displacement:

 $\delta_{\text{N,C2 (DLS)}} = \delta_{\text{N,C2 (DLS)-Factor}} \cdot \tau$

 $\delta_{N,C2}$ (ULS) = $\delta_{N,C2}$ (ULS)-Factor $\cdot \tau$

τ: acting bond strength under tension loading

2) Calculation of effective displacement:

 $\delta_{V,C2 (DLS)} = \delta_{V,C2 (DLS)-Factor} \cdot V$

 $\delta_{V,C2}(ULS) = \delta_{V,C2}(ULS)$ -Factor · V

V: acting shear loading

fischer Superbond

Performances

Characteristic resistance to combined pull-out and concrete failure under seismic action (performance category C2) for fischer anchor rods and standard threaded rods
