

DECLARACIÓN DE PRESTACIONES

DoP 0337

para fischer anclaje FAZ II Plus dynamic (Fijación a posteriori en hormigón fisurado y no fisurado)

ES

1. Código de identificación única del producto tipo: DoP 0337
2. Usos previstos: Anclajes químicos para hormigón bajo sollicitación cíclica de fatiga, véase el apéndice, especialmente los anexos B1- B4.
3. Fabricante: fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Alemania
4. Representante autorizado: -
5. Sistemas de evaluación y verificación de la constancia de las prestaciones (EVCP): 1
6. Documento de evaluación europeo: EAD 330250-00-0601, Edition 06/2021
Evaluación técnica europea: ETA-20/0897; 2023-05-22
Organismo de evaluación técnica: DIBt- Deutsches Institut für Bautechnik
Organismos notificados: 2873 TU Darmstadt

7. Prestaciones declaradas:

EAD 330250-00-0601; Table 2.1

Resistencia mecánica y estabilidad (BWR 1)

Resistencia característica a tracción (carga estática y cuasi-estática) Método A:

Resistencia de rotura del acero: Anexo C1

Résistance à la rupture par extraction glissement: Anexo C1

Resistencia de rotura por cono de hormigón: Anexo C1

Robustez: Anexo C1

Distancia mínima entre el borde y el centro: Anexos C5, C6

Distancia al borde para evitar la rotura del acero sometido a carga: Anexo C1

Resistencia característica a cortante (carga estática y cuasi-estática), Method A:

Resistencia de rotura del acero (esfuerzo cortante): Anexo C2

Resistencia falla por arrancamiento lateral: Anexo C2

Desplazamientos:

Desplazamiento por carga estática y cuasi-estática: Anexo C9

Resistencia y desplazamientos característicos para las categorías sísmicas C1 y C2:

Resistencia a carga de tracción, categoría C1: Anexo C7

Resistencia a carga de tracción, desplazamientos, categoría C2: Anexos C8, C9

Resistencia a esfuerzo cortante, categoría C1: Anexo C7

Resistencia a esfuerzo cortante, desplazamientos, categoría C2: Anexos C8, C9

Factor espacio anular: Anexos C7, C8

Seguridad en caso de incendio (BWR 2)

Reacción al fuego: Clase (A1)

Resistencia al fuego:

Resistencia al fuego, rotura del acero (carga de tracción): Anexo C3

Resistencia al fuego, a la extracción (carga de tracción): Anexo C3

Resistencia al fuego, rotura del acero (esfuerzo cortante): Anexos C3, C4

Durabilidad:

Durabilidad: Anexos A3, B1

EAD 330250-00-0601; Table 2.5

evaluación del método C: función linealizada

Resistencia mecánica y estabilidad (BWR 1)

Resistencia característica del acero a la fatiga, bajo sollicitación a tracción: Anexos C10, C11

Resistencia característica del cono de hormigón a la fatiga, arranque, fisuración y rotura localizada, bajo sollicitación a tracción: Anexos C10, C11

Resistencia característica al arranque o arranque combinado con rotura de cono, bajo sollicitación a tracción: Anexos C10, C11

Resistencia característica del acero a fatiga bajo sollicitación a cortante: Anexos C10, C11

Resistencia característica del borde del hormigón a la fatiga bajo sollicitación a cortante: Anexos C10, C11

Resistencia característica del hormigón por efecto palanca a la fatiga, bajo sollicitación a cortante: Anexos C10, C11

Resistencia característica del acero a la fatiga, bajo sollicitación a cortante: Anexos C10, C11

Factor de transferencia de cargas para sollicitaciones a tracción y a cortante: Anexos C10, C11

8. Documentación técnica adecuada o documentación técnica específica: -

Las prestaciones del producto identificado anteriormente son conformes con el conjunto de prestaciones declaradas. La presente declaración de prestaciones se emite, de conformidad con el Reglamento (UE) no 305/2011, bajo la sola responsabilidad del fabricante arriba identificado.

Firmado por y en nombre del fabricante por:

Dr. Oliver Geibig, Director General Unidades de Negocio e Ingeniería
Tumlingen, 2023-06-05

Jürgen Grün, Director General de Química y Calidad

Esta DdR se ha preparado en distintos idiomas. En caso de que haya alguna controversia sobre la interpretación prevalecerá siempre la versión inglesa.

El Apéndice incluye información voluntaria y complementaria en idioma inglés que excede los requisitos legales (de idioma neutral).

Specific Part

1 Technical description of the product

The fischer Bolt Anchor FAZ II Plus dynamic is an anchor made of galvanised steel (FAZ II Plus dynamic) or stainless steel (FAZ II Plus dynamic R) which is placed into a drilled hole and anchored by torque-controlled expansion.

The fastener consists of an fischer Bolt Anchor FAZ II Plus with cone bolt, expansion clip, washer and hexagon nut and a Dynamic set with filling conical washer, spherical washer and lock nut.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic (static, quasi-static loading and seismic)	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annexes C 1, C 5, C 6
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 2
Displacements (static and quasi-static loading)	See Annex C 9
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annexes C 7 to C 9

Essential characteristic (fatigue loading, Linearized function - Assessment method C)	Performance
Characteristic fatigue resistance under cyclic tension loading	See Annexes C 10 and C 11
Characteristic steel fatigue resistance $\Delta N_{Rk,s,0,n}$ ($n = 1$ to $n = \infty$)	
Characteristic concrete cone, pull-out, splitting and blow out fatigue resistance $\Delta N_{Rk,c,0,n}$ $\Delta N_{Rk,sp,0,n}$ $\Delta N_{Rk,cb,0,n}$ ($n = 1$ to $n = \infty$)	
Characteristic pull- out fatigue resistance $\Delta N_{Rk,p,0,n}$ ($n = 1$ to $n = \infty$)	

Essential characteristic (fatigue loading, Linearized function - Assessment method C)	Performance
Characteristic fatigue resistance under cyclic shear loading	
Characteristic steel fatigue resistance $\Delta V_{Rk,s,0,n}$ ($n = 1$ to $n = \infty$)	See Annexes C 10 and C 11
Characteristic concrete edge fatigue resistance $V_{Rk,c,0,n}$ ($n = 1$ to $n = \infty$)	
Characteristic concrete pry out fatigue resistance $\Delta V_{Rk,cp,0,n}$ ($n = 1$ to $n = \infty$)	
Characteristic fatigue resistance under cyclic combined tension and shear loading	
Characteristic steel fatigue resistance a_s ($n = 1$ to $n = \infty$)	See Annexes C 10 and C 11
Load transfer factor for cyclic tension and shear loading	
Load transfer factor ψ_{FN}, ψ_{FV}	See Annexes C 10 and C 11

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 3 and C 4

3.3 Aspects of durability

Essential characteristic	Performance
Durability	See Annex B 1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document No. 330250-00-0601, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Cone bolt manufactured by cold - forming:

Cone bolt manufactured by turning:

- ① Expansion sleeve
- ② Cone bolt (cold – formed or turned)
- ③ Filling adapter
- ④ Filling conical washer (various versions)
- ⑤ Spherical washer
- ⑥ Washer
- ⑦ Hexagon nut
- ⑧ Lock nut

fischer Bolt Anchor FAZ II Plus dynamic

Product description
Materials**Annex A 3**

Appendix 5 / 20

Specifications of intended use

Fastenings subject to:

Size	FAZ II Plus dynamic, FAZ II Plus dynamic R		
	M16	M20	M24
Hammer drilling with standard drill bit 			
Hammer drilling with hollow drill bit with automatic cleaning 		✓	
Static and quasi-static loading in cracked and uncracked concrete		✓	
Seismic actions category C1 and C2 – not in combination with fatigue loading		✓	
Fire exposure – not in combination with fatigue loading		✓	
Fatigue load in cracked and uncracked concrete – not in combination with seismic- or fire exposure		✓	

Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206:2013+A2:2021
- Strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (FAZ II Plus dynamic, FAZ II Plus dynamic R)
- For all other conditions according to EN 1993-1-4:2006 + A1:2015 corresponding to corrosion resistance class CRC III: for FAZ II Plus dynamic R

Design:

- Fastenings are to be designed under the responsibility of an engineer experienced in fastenings and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.)
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 061: 2020-08 "Design method for fasteners in concrete under fatigue cyclic loading"
- Fastenings in stand-off installation according to EN 1992-4:2018, 6.2.2.3 are not covered by this European Technical Assessment
- Fatigue design cannot be done in combination with seismic- or fire exposure

fischer Bolt Anchor FAZ II Plus dynamic

Intended use
Specifications

Annex B 1

Appendix 6 / 20

Table B2.1: Installation parameters

Size	FAZ II Plus dynamic, FAZ II Plus dynamic R		
	M16	M20	M24
Nominal drill hole diameter $d_0 =$	16	20	24
Maximum bit diameter with hammer or hollow drilling $d_{cut,max}$ [mm]	16,50	20,55	24,55
Effective embedment depth $h_{ef} \geq$	65 - 160	100 - 180	125
Length from h_{ef} to end of cone bolt L	17,5	20,0	23,5
Overall fastener embedment depth in the concrete $h_{nom} \geq$	$h_{ef} + L$		
Depth of drill hole to deepest point $h_1^{1)} \geq$	$h_{nom} + 5$	$h_{nom} + 10$	
Diameter of clearance hole in the fixture $d_f \leq$ [mm]	18	22	26
Required setting torque $T_{inst} =$ [Nm]	110	200	270
Minimum thickness of the fixture $t_{fix,min} \geq$	15	20	24
Thickness of the fixture $t_{fix,ges} =$ [mm]	$t_{fix} + 11$	$t_{fix} + 13$	$t_{fix} + 17$

¹⁾ For the application without drill hole cleaning: $h_{1,nc} = h_1 + 15$ mm

- h_{ef} = Effective embedment depth
- t_{fix} = Thickness of the fixture
- $t_{fix,ges}$ = Thickness of the fixture and the filling set
- h_1 = Depth of drill hole to deepest point
- $h_{1,nc}$ = Depth of drill hole to deepest point without cleaning
- h = Thickness of the concrete member
- h_{min} = Minimum thickness of concrete member
- h_{nom} = Overall fastener embedment depth in the concrete
- T_{inst} = Required setting torque
- L = Length from h_{ef} to end of cone bolt

(Fig. not to scale)

fischer Bolt Anchor FAZ II Plus dynamic

Intended use
Installation parameters

Annex B 2

Appendix 7 / 20

Installation instructions:

- Fastener installation carried out by appropriately qualified personnel according to the design drawings and under the supervision of the person responsible for technical matters on the site
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener
- Hammer- or hollow drilling according to Annex B 2
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application

Installation instructions: Drilling and cleaning the hole

Types of drills and cleaning

<p>Hammer drill (e.g. fischer Quattric II) with cleaning</p>		 <p>1: Drill the hole</p>	 <p>2: Clean the hole</p>	<p>Continue with step 5</p>
<p>Hammer drill (e.g. fischer Quattric II) without cleaning</p>		 <p>1: Drill the hole</p> <p>$h_{1,nc} = h_1 + 15 \text{ mm}$</p>	 <p>2: When $h_{1,nc}$ is reached: Pull out drill 3 x</p>	 <p>Cleaning not necessary; Continue with step 5</p>
<p>Hollow drill (e.g. fischer FHD)</p>		 <p>1: Drill the hole with automatic cleaning (e.g. fischer FVC)</p>	 <p>Cleaning obsolete</p>	<p>Continue with step 5</p>

fischer Bolt Anchor FAZ II Plus dynamic

Intended use
Installation instructions

Annex B 3

Appendix 8 / 20

Installation instructions: Installation of the fastener

5: Check the position of the conical washer

6: Set the fastener. E.g. with fischer FA-ST II setting tool:

7: Apply T_{inst}

8: Tighten lock nut manually, then use wrench to give another quarter turn

9: The gap between anchor and fixture (annular gap) must be filled with mortar (compressive strength $\geq 50 \text{ N/mm}^2$ e.g. fischer FIS HB, FIS V Plus, FIS EM Plus or FIS SB) via the fillable conical washer.

10: Correctly installed fastener

fischer Bolt Anchor FAZ II Plus dynamic

Performances

Minimum thickness of member, minimum spacings and edge distances

Annex C 5

Determination of $A_{sp,ef}$ for each existing free edge

Splitting failure applied for minimum edge distance and spacing in depending on h_{ef}

Definition Index:

cal = calculatory

e.g.: $s_{x,y}$

x = load direction

y = number anchor plate

Example for different anchor plates: For considering all free edges the direction 1 and 2 must be swapped.

General formulation for each free edge: $A_{sp,ef} = (C_2 + S_{cal} + C_3) \cdot h_{cal} \geq (n/2) \cdot A_{sp,req}$

with:

Edge distance c_1 : $c_{min} \leq c_1$

Edge distance c_2 : $c_{min} \leq c_2 \leq 1,5 \cdot c_1$

Edge distance c_3 : $c_{min} \leq c_3 \leq 1,5 \cdot c_1$

Calculation spacing, distance between outer anchors s_{cal} : $s_{min} \leq s_{cal} \leq 3,0 \cdot c_1$

Distance between group of anchors a : For $a \geq 3,0 \cdot c_1$ no influence between the anchor groups is taken into account.

Number of anchors n of an anchor plate as well close and parallel to the edge

Effective member thickness h_{cal} : $h_{min} \leq h$; $h_{cal} \leq h$; $h_{cal} \leq (h_{ef} + 1,5 \cdot c_1)$

c_1 , c_2 , c_3 , h and s_{cal} have to be set in way that the requirement is fulfilled

For the calculation of minimum spacing and minimum edge distance of fasteners in combination with different embedment depths and thicknesses of concrete members the following equation shall be fulfilled:

$$A_{sp,req} < A_{sp,ef}$$

$A_{sp,req}$ = required splitting area (according to Annex C 5)

$A_{sp,ef}$ = effective splitting area

(Fig. not to scale)
