

## DECLARACIÓN DE PRESTACIONES

### DoP 0334

para el anclaje- perno fischer FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR (anclaje mecánico para uso en hormigón)

ES

1. Código de identificación única del producto tipo: **DoP 0334**
2. Usos previstos: **Fijación a posteriori en hormigón fisurado y no fisurado, véase el apéndice, especialmente los anexos B1 - B4.**
3. Fabricante: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Alemania**
4. Representante autorizado: **-**
5. Sistemas de evaluación y verificación de la constancia de las prestaciones (EVCP): **1**
6. Documento de evaluación europeo: **EAD 330232-01-0601, Edition 05/2021**  
Evaluación técnica europea: **ETA-19/0520; 2023-05-24**  
Organismo de evaluación técnica: **DIBt- Deutsches Institut für Bautechnik**  
Organismos notificados: **2873 TU Darmstadt**
7. Prestaciones declaradas:  
**Resistencia mecánica y estabilidad (BWR 1)**  
**Resistencia característica a tracción (carga estática y cuasi-estática) Método A:**  
Resistencia de rotura del acero: Anexo C1  
Résistance à la rupture par extraction glissement: Anexo C1  
Resistencia de rotura por cono de hormigón: Anexo C1  
Robustez: Anexo C1  
Distancia mínima entre el borde y el centro: Anexos C5, C6  
Distancia al borde para evitar la rotura del acero sometido a carga: Anexo C1  
  
**Resistencia característica a cortante (carga estática y cuasi-estática), Method A:**  
Resistencia de rotura del acero (esfuerzo cortante): Anexo C2  
Resistencia falla por arrancamiento lateral: Anexo C2  
  
**Resistencia característica para diseño simplificado:**  
Método B: NPD  
Método C: NPD  
  
**Desplazamientos:**  
Desplazamiento por carga estática y cuasi-estática: Anexo C9  
  
**Resistencia y desplazamientos característicos para las categorías sísmicas C1 y C2:**  
Resistencia a carga de tracción, desplazamientos, categoría C1: Anexo C7  
Resistencia a carga de tracción, desplazamientos, categoría C2: Anexos C8, C9  
Resistencia a esfuerzo cortante, desplazamientos, categoría C1: Anexo C7  
Resistencia a esfuerzo cortante, desplazamientos, categoría C2: Anexos C8, C9  
Factor espacio anular: Anexos C7, C8  
  
**Seguridad en caso de incendio (BWR 2)**  
Reacción al fuego: Clase (A1)  
**Resistencia al fuego:**  
Resistencia al fuego, rotura del acero (carga de tracción): Anexo C3  
Resistencia al fuego, a la extracción (carga de tracción): Anexo C3  
Resistencia al fuego, rotura del acero (esfuerzo cortante): Anexos C3, C4  
  
**Durabilidad:**  
Durabilidad: Anexos A4, B1
8. Documentación técnica adecuada o documentación técnica específica: **-**

Las prestaciones del producto identificado anteriormente son conformes con el conjunto de prestaciones declaradas. La presente declaración de prestaciones se emite, de conformidad con el Reglamento (UE) no 305/2011, bajo la sola responsabilidad del fabricante arriba identificado.

Firmado por y en nombre del fabricante por:

Dr.-Ing. Oliver Geibig, Director General Unidades de Negocio e Ingeniería  
Tumlingen, 2023-05-31

Jürgen Grün, Director General de Química y Calidad

Esta DdR se ha preparado en distintos idiomas. En caso de que haya alguna controversia sobre la interpretación prevalecerá siempre la versión inglesa.

El Apéndice incluye información voluntaria y complementaria en idioma inglés que excede los requisitos legales (de idioma neutral).

## Specific Part

### 1 Technical description of the product

The fischer Bolt Anchor FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR is an anchor made of galvanized steel (FAZ II Plus), stainless steel (FAZ II Plus R) or high corrosion resistant steel (FAZ II Plus HCR) which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading), Method A	See Annex C1, C5 and C6
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C2
Displacements	See Annex C9
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C7 to C9

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C3 and C4

#### 3.3 Aspects of Durability

Essential characteristic	Performance
Durability	See Annex B1

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with the European Assessment Document EAD 330232-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Cone bolt manufactured by cold - forming:

Cone bolt manufactured by turning:

- ① Expansion sleeve
- ② Cone bolt (cold – formed or turned)
- ③ Washer
- ④ Hexagon nut
- ⑤ fischer FAZ II Plus dome nut

## Specifications of intended use

### Fastenings subject to:

Size	FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR						
	M6	M8	M10	M12	M16	M20	M24
Hammer drilling with standard drill bit 				✓			
Hammer drilling with hollow drill bit with automatic cleaning 	- <sup>1)</sup>			✓			
Diamond drilling 	- <sup>1)</sup>	✓	(for non seismic applications only)				
Static and quasi-static loads				✓			
Cracked and uncracked concrete				✓			
Fire exposure							
Seismic performance category	C1	- <sup>1)</sup>		✓			
	C2	- <sup>1)</sup>			✓		

<sup>1)</sup> No performance assessed

#### Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked or uncracked) according to EN 206-1:2013+A2:2021
- Strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021

#### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR)
- For all other conditions according to EN 1993-1-4:2006 + A1:2015 corresponding to corrosion resistance class
  - CRC III: for FAZ II Plus R
  - CRC V: for FAZ II Plus HCR

#### Design:

- Fastenings are to be designed under the responsibility of an engineer experienced in fastenings and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.)
- Fastenings in stand-off installation or with a grout layer under seismic action are not covered
- In case of seismic applications the fastener shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 055:2018

Specifications

**Annex B1**

Annex 7 / 19

**Table B2.1: Installation parameters**

Size	FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR						
	M6	M8	M10	M12	M16	M20	M24
Nominal drill hole diameter $d_0 =$	6	8	10	12	16	20	24
Maximum bit diameter with hammer or hollow drilling $d_{cut,max}$ [mm]	6,40	8,45	10,45	12,5	16,5	20,55	24,55
Maximum bit diameter with diamond drilling	- <sup>1)</sup>	8,15		12,25	16,45	20,50	24,40
Effective embedment depth $h_{ef} \geq$	40-80	35-90	40-100	50-125	65-160	100-180	125
Length from $h_{ef}$ to end of cone bolt $L$	6,5	9,5	11,5	13,5	17,5	20,0	23,5
Overall fastener embedment depth in the concrete $h_{nom} \geq$ [mm]	$h_{ef} + L$						
Depth of drill hole to deepest point $h_1^{2)} \geq$	$h_{nom} + 3$		$h_{nom} + 5$		$h_{nom} + 10$		
Diameter of clearance hole in the fixture $d_f \leq$ [mm]	7	9	12	14	18	22	26
Required setting torque $T_{inst} =$ [Nm]	8	20	45	60	110	200	270
Excess length after hammering-in the cone bolt (for fischer dome nut applications according to Annex B4) $O =$ [mm]	- <sup>1)</sup>		12	16	20	- <sup>1)</sup>	

<sup>1)</sup> Not part of the assessment

<sup>2)</sup> For the application without drill hole cleaning:  $h_{1,nc} = h_1 + 15 \text{ mm}$

Setting gauge FAZ II Plus SL-H for fastener with fischer FAZ II Plus dome nut:

- $h_{ef}$  = Effective embedment depth
- $h_{nom}$  = Overall fastener embedment depth in the concrete
- $h_1$  = Depth of drill hole to deepest point
- $h_{1,nc}$  = Depth of drill hole to deepest point without cleaning
- $L$  = Length from  $h_{ef}$  to end of cone bolt

- $h$  = Thickness of the concrete member
- $h_{min}$  = Minimum thickness of concrete member
- $t_{fix}$  = Thickness of the fixture
- $O$  = Length of setting gauge
- $T_{inst}$  = Required setting torque

fischer Bolt Anchor FAZ II Plus, FAZ II Plus R, FAZ II Plus HCR

**Intended Use**  
Installation parameters

**Annex B2**

Annex 8 / 19

## Installation instructions:

- Fastener installation carried out by appropriately qualified personnel according to the design drawings and under the supervision of the person responsible for technical matters on the site
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener  
Exception: fischer FAZ II Plus dome nut
- Hammer, hollow or diamond drilling according to Annex B1 + B2
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application

## Installation instructions: Drilling and cleaning the hole

### Types of drills and cleaning

<p>Hammer drill (e.g. fischer Quattric II) with cleaning</p>		 <p>1: Drill the hole</p>	 <p>2: Clean the hole</p>	<p>Continue with step 5</p>	
<p>Hammer drill (e.g. fischer Quattric II) without cleaning</p>		 <p>1: Drill the hole</p> <p><math>h_{1,nc} = h_1 + 15 \text{ mm}</math></p>	 <p>2: When <math>h_{1,nc}</math> is reached: Pull out drill 3 x</p>	 <p>Cleaning not necessary; Continue with step 5</p>	
<p>Hollow drill (e.g. fischer FHD)</p>		 <p>1: Drill the hole with automatic cleaning (e.g. fischer FVC)</p>	 <p>Cleaning obsolete</p>	<p>Continue with step 5</p>	
<p>Diamond drill, for non seismic applications only</p>		 <p>1: Drill the hole</p>	 <p>2: Break the drill core and remove it</p>	 <p>3: Flush the drill hole, until clear water emerges from the drill hole</p>	 <p>4: Clean the hole</p>

fischer Bolt Anchor FAZ II Plus, FAZ II Plus R,  
FAZ II Plus HCR

**Intended Use**  
Installation instructions

**Annex B3**

Annex 9 / 19

# Installation instructions: Installation of the fastener

## HEXAGON NUT:

5.a: Set the fastener e.g. with hammer

5.b: Set the fastener e.g. fischer FA-ST II

6: Apply  $T_{inst}$

7: Installed fastener

## fischer FAZ II Plus DOME NUT:

Option 1: Push through installation with setting gauge SL-H:

5.1: Set the fastener through the setting gauge and fixture

5.2: Check offset

5.3: Turn on the fischer FAZ II Plus dome nut

6: Apply  $T_{inst}$

7: Installed fastener

Option 2: Push through installation with hexagon nut:

5.1: Check setting position: Visible one turn of a thread

5.2: Set the fastener

5.3: Remove nut

## fischer Filling conical washer FFD optional for seismic C2 application or minimising the annular gap:

Optional The gap between bolt and fixture may be filled with mortar (compressive strength  $\geq 50 \text{ N/mm}^2$  e.g. fischer FIS SB) after last step (for eliminating the annular gap). The FFD is additional to the standard washer. The thickness of the FFD must be considered for definition of  $t_{fix}$ . Countersunk of the FFD in direction to the anchor plate. Installation with hexagon nut or dome nut is permitted.

Annex 15 / 19

## Determination of $A_{sp,ef}$ for each existing free edge

**Splitting failure** applied for minimum edge distance and spacing in depending on  $h_{ef}$

Definition Index:

cal = calculatory

e.g.:  $s_{x,y}$

x = load direction

y = number anchor plate

Example for different anchor plates: For considering all free edges the direction 1 and 2 must be swapped.

General formulation for each free edge:  $A_{sp,ef} = (C_2 + s_{cal} + C_3) \cdot h_{cal} \geq (\frac{n}{2}) \cdot A_{sp,req}$

with:

Edge distance  $C_1$ :  $C_{min} \leq C_1$

Edge distance  $C_2$ :  $C_{min} \leq C_2 \leq 1,5 \cdot C_1$

Edge distance  $C_3$ :  $C_{min} \leq C_3 \leq 1,5 \cdot C_1$

Calculation spacing, distance between outer anchors  $s_{cal}$ :  $s_{min} \leq s_{cal} \leq 3,0 \cdot C_1$

Distance between group of anchors  $a$ : For  $a \geq 3,0 \cdot C_1$  no influence between the anchor groups is taken into account.

Number of anchors  $n$  of an anchor plate as well close and parallel to the edge

Effective member thickness  $h_{cal}$ :  $h_{min} \leq h$ ;  $h_{cal} \leq h$ ;  $h_{cal} \leq (h_{ef} + 1,5 \cdot C_1)$

$C_1$ ,  $C_2$ ,  $C_3$ ,  $h$  and  $s_{cal}$  have to be set in way that the requirement is fulfilled

For the calculation of minimum spacing and minimum edge distance of fasteners in combination with different embedment depths and thicknesses of concrete members the following equation shall be fulfilled:

$$A_{sp,req} < A_{sp,ef}$$

$A_{sp,req}$  = required splitting area (according to Annex C 5)

$A_{sp,ef}$  = effective splitting area

*(Figure not to scale)*
