7. Prestaciones declaradas:

Resistencia mecánica y estabilidad (BWR 1)

Resistencia característica a tracción (carga estática y cuasi-estática):
- Resistencia de rotura del acero: Anexo C1
- Resistencia para la combinación de rotura por cono de hormigón y extracción: Anexos C2 - C4
- Resistencia de rotura por cono de hormigón: Anexo C2
- Distancia al borde para evitar la rotura del acero sometido a carga: Anexo C2
- Robustez: Anexos C2 - C4
- Par máximo de montaje: Anexos B4
- Distancia mínima entre el borde y el centro: Anexos B3 - B5

Resistencia característica a cortante (carga estática y cuasi-estática):
- Resistencia de rotura del acero: Anexo C1
- Resistencia falla por arrancamiento lateral: Anexo C2
- Resistencia de rotura del hormigón al borde: Anexo C2

Desplazamientos bajo carga a corto y largo plazo:
- Desplazamientos bajo carga a corto y largo plazo: Anexo C5

Resistencia y desplazamientos característicos para las categorías sísmicas C1 y C2:
- Resistencia a carga de tracción, desplazamientos, categoría C1: NPD
- Resistencia a carga de tracción, desplazamientos, categoría C2: NPD
- Resistencia a esfuerzo cortante, desplazamientos, categoría C1: NPD
- Resistencia a esfuerzo cortante, desplazamientos, categoría C2: NPD
- Factor espacio anular: NPD

Higiene, salud y medio ambiente (BWR 3)
- Contenido, emisión y/o desprendimiento de sustancias peligrosas: NPD

8. Documentación técnica adecuada o documentación técnica específica: **–**

Las prestaciones del producto identificado anteriormente son conformes con el conjunto de prestaciones declaradas. La presente declaración de prestaciones se emite, de conformidad con el Reglamento (UE) no 305/2011, bajo la sola responsabilidad del fabricante arriba identificado.

Specific Part

1 Technical description of the product

The "fischer injection system FIS RC II" is a bonded fastener consisting of a cartridge with injection mortar fischer FIS RC II and a steel element according to Annex A3.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex B 3 to B 6, C 1 to C 4
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 and C 2
Displacements under short-term and long-term loading	See Annex C 5
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Specifications of intended use part 2

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016.

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
  (stainless steel or high corrosion resistant steel).
- For all other conditions according to EN1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 5 table 5.1.

Design:

- Fastenings have to be designed under the responsibility of an engineer with experienced in fastenings and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Fastenings are designed in accordance with:
  EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Fastenings depth should be marked and adhered to installation.

Splitting failure for minimum edge distance and spacing in dependence of the effective embedment depth h_{ef}.

For the calculation of minimum spacing and minimum edge distance of anchors in combination with different embedment depths and thicknesses of concrete members the following equation shall be fulfilled:

$$\mathbf{A_{sp,req} < A_{sp,t}}$$

$A_{sp,req}$ = required projecting area
$A_{sp,t}$ = $A_{sp,ef}$ = effective projecting area (according to Annex B 6)

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole. Nominal drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **tables B3.1, B4.1.**
2		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18$ mm blow out the hole four times by hand.
		For $h_{ef} > 12d$ and / or $d_0 \geq 18$ mm blow out the hole four times with oil-free compressed air ($p \geq 6$ bar). Use suitable compressed-air nozzle.
3		Brush the drill hole four times. For drill hole diameter ≥ 30 mm use a power drill. For deep holes use an extension. Use suitable brushes (see **table B7.1**)
4		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18$ mm blow out the hole four times by hand.
		For $h_{ef} > 12d$ and / or $d_0 \geq 18$ mm blow out the hole four times with oil-free compressed air ($p \geq 6$ bar). Use suitable compressed-air nozzle.

Go to step 5

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see **table B1.1**) for correct operation of the dust extraction.
2		Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data. Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **tables B3.1, B4.1.**

Go to step 5

Installation instructions part 2

Preparing the cartridge

5		Mark the setting depth of the steel element.
6		Remove the sealing cap. Screw on the static mixer (the spiral in the static mixer must be clearly visible).
7	 	Place the cartridge into the dispenser.
8	 	Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey.

Go to step 9

Injection of the mortar

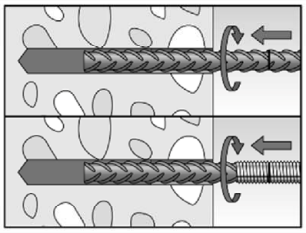
9	 For $h_0 = h_{ef}$ fill approximately 2/3 of the drill hole with mortar. For $h_0 > h_{ef}$ more mortar is needed. Always begin from the bottom of the hole and avoid bubbles.	 The conditions for mortar injection without extension tube can be found in **table B7.2.** For deeper drill holes, than those mentioned in **table B7.2,** use a suitable extension tube.	 For deep holes ($h_0 > 250$ mm) use an injection adapter.

Go to step 10

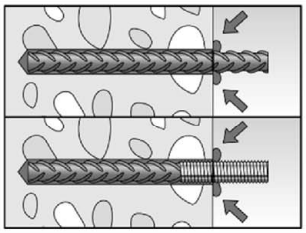
Installation instructions part 3

Installation reinforcing bars and fischer rebar anchor FRA

10

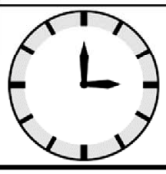


Only use clean and oil-free reinforcing bars or fischer FRA. Insert the rebar / fischer rebar anchor FRA slowly twisted into the borehole until the embedment mark is reached.
Recommendation:
Rotation back and forth of the reinforcement bar or the fischer rebar anchor FRA makes pushing easy.



When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole.

11



Wait for the specified curing time t_{cure} see **table B7.3**
