

DECLARACIÓN DE PRESTACIONES

DoP 0423

para el sistema de inyección fischer FIS VB (Anclaje químico para uso en mampostería)

ES

1. Código de identificación única del producto tipo:

DoP 0423
2. Usos previstos:

Fijación a posteriori en mampostería, Véase el apéndice, especialmente los anexos B1 - B11.
3. Fabricante:

fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Alemania
4. Representante autorizado:

–
5. Sistemas de evaluación y verificación de la constancia de las prestaciones (EVCP):

1
6. Documento de evaluación europeo:

EAD 330076-01-0604
- Evaluación técnica europea:

ETA-26/0280; 2026-09-02
- Organismo de evaluación técnica:

1020, TZUS - TECHNICKY A ZKUSEBNI USTAV STAVEBNI PRAHA s.p.
- Organismos notificados:

2873, Technische Universität Darmstadt, Institut für Stahlbau und Werkstoffmechanik
7. Prestaciones declaradas:

Resistencia mecánica y estabilidad (BWR 1)

Resistencia característica bajo carga estática y cuasi-estática:

1 Resistencia característica por fallo del acero de un anclaje individual bajo sollicitación a tracción: véase el apéndice, especialmente anexo C1

2 Resistencia característica por fallo del acero de un anclaje individual bajo sollicitación a cortante sin brazo de palanca: véase el apéndice, especialmente anexo C2

3 Resistencia característica a fallo por arranque o por rotura del ladrillo de un anclaje individual bajo sollicitación a tracción, factor de minoración: Véase el apéndice, especialmente los anexos C4, C6, C8, C10, C12,C14, C16, C17

4 Resistencia característica a fallo local del ladrillo o por rotura del ladrillo de un anclaje individual bajo carga a cortante: Véase el apéndice, especialmente los anexos C4, C6, C8, C10, C12,C14, C16

5 Resistencia característica a fallo por rotura del ladrillo de un grupo de anclajes bajo sollicitación a tracción: Véase el apéndice, especialmente los anexos B10, B11, C3, C5, C7, C9, C11,C13, C15

6 Resistencia característica a fallo por rotura local o total del ladrillo de un grupo de anclajes bajo sollicitación a cortante: Véase el apéndice, especialmente los anexos B10, B11, C3, C5, C7, C9, C11,C13, C15

7 Distancias al borde y entre ejes, y espesor de la base de anclaje: Véase el apéndice, especialmente los anexos B10, B11, C3, C5, C7, C9, C11,C13, C15

8 Desplazamientos bajo cargas a tracción y a cortante: véase el apéndice, especialmente anexo C18

9 Par de apriete de montaje máximo: Véase el apéndice, especialmente los anexos B4, B5

Resistencia y desplazamientos característicos bajo sollicitaciones sísmicas:

10 Resistencia a carga de tracción, desplazamientos: NPD

11 Resistencia a esfuerzo cortante, desplazamientos: NPD

12 Factor espacio anular: NPD

Seguridad en caso de incendio (BWR 2)

13 Reacción al fuego: Clase (A1)

14 Resistencia al fuego bajo sollicitación a tracción y a cortante, con y sin brazo de palanca: NPD

Higiene, salud y medio ambiente (BWR 3)

15 Contenido, emisión y/o desprendimiento de sustancias peligrosas: NPD
8. Documentación técnica adecuada o documentación técnica específica:

–

Las prestaciones del producto identificado anteriormente son conformes con el conjunto de prestaciones declaradas. La presente declaración de prestaciones se emite, de conformidad con el Reglamento (UE) no 305/2011, bajo la sola responsabilidad del fabricante arriba identificado.

Firmado por y en nombre del fabricante por:

Dr. Christian Weber, Director de Desarrollo
Tumlingen, 2026-10-01

Dieter Pfaff, Jefe de la Federación Internacional de Producción y Gestión de Calidad

Specific parts

1. Technical description of the product

The fischer injection system FIS VB for masonry is a bonded anchor consisting of a cartridge with injection mortar, a steel element and a plastic sleeve. The steel elements is galvanized or stainless steel threaded rod.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and masonry.

The illustration and the description of the product are given in Annex A.

2. Specification of the intended use in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for static and quasi-static loading	Annex C1 to C16
Characteristic resistance and displacements for seismic loading	No performance assessed

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Satisfy the requirements for performance class A1
Resistance to fire under tension and shear loading with and without lever arm, minimum edge distances and spacing	No performance assessed

3.3 Hygiene, health and environment (BWR 3)

No performance assessed.

4. Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

According to the Decision 97/177/EC of the European Commission the system of assessment verification of constancy of performance (see Annex IX to Regulation (EU) 2024/3110) is system 1.

Installation conditions

Anchor rods with perforated sleeve FIS H K; Installation in perforated and solid brick masonry

Pre-positioned installation

Installation with render bridge

Size of the perforated sleeve:

Intended use Specifications part 1			

Specifications of intended use part 2

Anchorage subject to:

- Static and quasi-static loads

Base materials:

- Solid brick masonry (base material group b) and autoclaved aerated concrete (base material group d), acc. to Annex B9.
- Hollow brick masonry (base material group c), according to Annex B9.
- For minimum thickness of masonry member is $h_{ef}+30\text{mm}$.
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2.
- For other bricks in solid masonry, hollow or perforated masonry and autoclaved aerated concrete, the characteristic resistance of the anchor may be determined by job site tests according to EOTA Technical Report TR 053 under consideration of the β -factor according to Annex C17, Table C17.1.

Note (only applies to solid bricks and autoclaved aerated concrete):

The characteristic resistance is also valid for larger brick sizes, higher compressive strength and higher raw density of the masonry unit.

Temperature Range:

- **Tb:** From - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc plated steel, stainless steel or high corrosion resistant steel)
- For all other conditions according to EN 1993-1-4 corresponding to corrosion resistance classes mentioned to Annex A4, Table A4.1.

fischer injection system FIS VB for masonry

Intended use
Specifications part 2

Annex B2

Appendix 7 / 34

Specifications of intended use part 3 continued

Design:

- The anchorages have to be designed in accordance with EOTA Technical Report TR 054, Design method A under the responsibility of a designer experienced in anchorages and masonry work.

Applies to all bricks, if no other values are specified:

$$N_{Rk} = N_{Rk,b} = N_{Rk,p} = N_{Rk,b,c} = N_{Rk,p,c}$$

$$V_{Rk} = V_{Rk,b} = V_{Rk,c,II} = V_{Rk,c,\perp}$$

For the calculation of pulling out a brick under tension loading $N_{Rk,pb}$ or pushing out a brick under shear loading $V_{Rk,pb}$ see EOTA Technical Report TR 054.

$N_{Rk,s}$, $V_{Rk,s}$ and $M^0_{Rk,s}$ see annexes C1-C2.

Factors for job site tests see Annex C17 and displacements see Annex C18.

- Verifiable calculation notes and drawings have to be prepared taking into account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is to be indicated on the design drawings.

Installation:

- Conditions d/d: - Installation and use in dry structures.
- Conditions w/w: - Installation and use in dry and wet structures.
- Conditions w/d: - Installation in wet structures and use in dry structures.
- In case of aborted hole: The hole shall be filled with injection mortar FIS VB.
- Bridging of unbearing layer (e.g., plaster) is permitted for masonry with solid bricks and cylindrical drill hole. At perforated brick masonry see Annex B6, Table B6.1.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Minimum curing time see Annex B6, Table B6.2.
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

Material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A4, Table A4.1

Conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204, the documents shall be stored.

Marking of the anchor rod with the envisage embedment depth. This may be done by the manufacturer of the rod or by a person on job site.

Installation instructions part 1

Installation in solid brick and autoclaved aerated concrete (without perforated sleeve)

1		Drill the hole (drilling method see Annex C of the respective brick) depth of drill hole h_0 and drill hole diameter d_0 see Table B4.1 .		
2				Blow out the hole twice by hand, brush the drill hole twice, Blow out the hole twice by hand. For deep holes use an extension. Use suitable brushes (see Table B6.1).
3		Remove the sealing cap. Screw on the static mixer. Place the cartridge into a suitable dispenser.		Ensuring that the spiral inside the mixer is clearly visible.
4		Extrude approximately 10 cm of material until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey.		
5		For $h_0 = h_{ef}$ fill approximately 2/3 of the drill hole with mortar. For $h_0 > h_{ef}$ more mortar is needed. Always begin from the bottom of the hole and avoid bubbles		For push through installation: the drill hole in the fixture must be also filled with mortar.
6		Only use clean and oil-free metal parts. Push the Anchor rod / Threaded rods with the setting depth mark down to the bottom of the hole, turning it slightly while doing so. After inserting the metal parts, excess mortar must be emerged around the anchor element.		
7		Wait for the specified curing time t_{cure} see Table B6.2 .		Mounting the fixture. max T_{inst} see parameter of brick in Annex C .

¹⁾ Exact volume of mortar see manufacturer's specification

fischer injection system FIS VB for masonry

Intended use
Installation instruction (without perforated sleeve) part 1

Annex B7

Appendix 12 / 34

Installation instructions part 2

Installation in perforated or solid brick with perforated sleeve (pre-positioned installation)

1		Drill the hole (drilling method see Annex C of the respective brick). depth of drill hole h_0 and drill hole diameter d_0 see Table B5.1 .	When install perforated sleeves in solid bricks or solid areas of hollow bricks, also clean the hole by blowing out and brushing.	
2		Remove the sealing cap. Screw on the static mixer. Place the cartridge into a suitable dispenser.		Ensuring that the spiral inside the mixer is clearly visible
3		Extrude approximately 10 cm of material until the resin is permanently grey in colour. Do not use mortar that is not uniformly grey.		
4		Insert the perforated sleeve flush with the surface of the masonry or plaster.		Fill the perforated sleeve completely with mortar beginning from the bottom of the hole ¹⁾ .
5		Only use clean and oil-free metal parts. Push the Anchor rod / Threaded rods with the setting depth mark down to the bottom of the hole, turning it slightly while doing so. After inserting the metal parts, excess mortar must be emerged around the anchor element.		
6		Wait for the specified curing time t_{cure} see Table B6.2 .		Mounting the fixture. $max T_{inst}$ see parameter of brick in Annex C .

¹⁾ Exact volume of mortar see manufacturer's specification

Spacing and edge distance part 1

Annex B10

Appendix 15 / 34

Spacing and edge distance part 2

For $s \geq s_{cr}$: $\alpha_g = 2$

For $s_{min} \leq s < s_{cr}$: α_g according to installation parameters of brick Annex C

Group of 2 anchors

$$N_{Rk}^g = \alpha_{g,N} \cdot N_{Rk}; V_{Rk,b}^g = V_{Rk,c,II}^g = V_{Rk,c,\perp}^g = \alpha_{g,V} \cdot V_{Rk}$$

Group of 4 anchors

$$N_{Rk}^g = \alpha_{g,N}(s_{minII}) \cdot \alpha_{g,N}(s_{min}^{\perp}) \cdot N_{Rk};$$

$$V_{Rk,b}^g = V_{Rk,c,II}^g = V_{Rk,c,\perp}^g = \alpha_{g,V}(s_{minII}) \cdot \alpha_{g,V}(s_{min}^{\perp}) \cdot V_{Rk}$$

with N_{Rk} and $\alpha_{g,N}$ depending on s_{minII} or $s_{min}^{\perp}$ acc. to Annex C

with V_{Rk} and $\alpha_{g,V}$ depending on s_{minII} or $s_{min}^{\perp}$ acc. to Annex C
