

## TOIMIVUSDEKLARATSIOON

### DoP 0394

fischer süstemsüsteemi FIS EM Plus jaoks (liimankur kasutamiseks betoonis)

ET

1. Tootetüübi kordumatu identifitseerimiskood: **DoP 0394**
2. Kavandatud kasutusala(d): **Hiljem paigaldatud kinnitused pragunenud või pragunemata betoonis, Vt lisa, eelkõige lisad B1 - B19.**
3. Tootja: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Saksamaa**
4. Volitatud esindaja: **–**
5. Toimivuse püsivuse hindamise ja kontrolli süsteem: **1**
6. Euroopa hindamisdokument: **EAD 330499-02-0601-v01**  
Euroopa tehniline hinnang: **ETA-17/0979; 2026-02-12**  
Tehnilise hindamise asutus: **DIBt- Deutsches Institut für Bautechnik**  
Teavitatud asutus(ed): **2873 TU Darmstadt**
7. Deklareeritud toimivus:  
**Mehaaniline vastupidavus ja stabiilsus (BWR 1)**  
**Iseloomulik vastupidavus tõmbekoormusele (staatiline ja kvasi-staatiline koormus):**
  - 1) Vastupidavus terase purunemisele: Vt lisa, eelkõige lisad C1, C2, C3, C4, C22, C24, C26
  - 2) Vastupidavus väljatõmbamisele ja betooni purunemisele: Vt lisa, eelkõige lisad C5-C19, C27-C37
  - 3) Vastupidavus betoonikoonuse purunemisele: Vt lisa, eelkõige lisa C5, C27
  - 4) Servakaugus pragunemise vältimiseks koormuse all: Vt lisa, eelkõige lisa C5, C27
  - 5) Paigaldusprotsessi töökindlus: Vt lisa, eelkõige lisad C5-C19, C27-C37, C43-C45, C49, C50
  - 6) Maksimaalne paigaldusmoment: Vt lisa, eelkõige lisad B4, B5, B9-B11, B14
  - 7) Minimaalne servakaugus, vahekaugus ja elemendi paksus: Vt lisa, eelkõige lisad B4 - B14**Iseloomulik vastupidavus nihkekoormusele (staatiline ja kvasi-staatiline koormus)**
  - 8) Vastupidavus terase purunemisele: Vt lisa, eelkõige lisad C1, C2, C3, C4, C23, C25, C26
  - 9) Vastupidavus väljaheite purunemisele: Vt lisa, eelkõige lisa C5, C27
  - 10) Vastupidavus betoonserva purunemisele: Vt lisa, eelkõige lisa C5, C27**Deformatsioonitegurid lühiajalise ja pikaajalise koormuse korral:**
  - 11) Deformatsioonitegurid lühiajalise ja pikaajalise koormuse korral: Vt lisa, eelkõige lisad C20, C21, C38, C39
  - 12) Vastupidavus teraskiudbetoonis: Vt lisa, eelkõige lisa B3**Iseloomulik vastupidavus ja nihked seismilise toimivuse kategooriates C1 ja C2:**
  - 13) Tõmbekoormuse vastupidavus seismilise kategooria C1 korral: Vt lisa, eelkõige lisad C40, C41, C43, C44, C46, C47, C49, C50
  - 14) Tõmbekoormuse vastupidavus, kategooria C2: Vt lisa, eelkõige lisad C41, C45
  - 15) Vastupidavus nihkekoormusele seismilise kategooria C1 korral: Vt lisa, eelkõige lisad C40, C41, C46, C47
  - 16) Vastupidavus nihkekoormusele ja nihketele seismilise kategooria C2 korral: Vt lisa, eelkõige lisad C41, C45**Ohutus tulekahju korral (BWR 2)**
  - 17) Reaktsioon tulele Klass (A1)**Tulekindlus:**
  - 18) Tulekindlus terase purunemise vastu (tõmbekoormus): Vt lisa, eelkõige lisad C51 - C53
  - 19) Tulekindlus sideme purunemisele tõmbekoormuse all: Vt lisa, eelkõige lisa C54
  - 20) Tulekindlus terase purunemise vastu (nihkejõud): Vt lisa, eelkõige lisad C51 - C53**Hügieen, tervis ja keskkond (BWR 3)**
  - 21) Ohtlike ainete sisaldus, emissioon ja vabanemine NPD
8. Asiakohane tehniline dokumentatsioon ja/või tehniline eridokumentatsioon: **–**

Eespool kirjeldatud toote toimivus vastab deklareeritud toimivusele. Käesolev toimivusdeklaratsioon on välja antud kooskõlas määrusega (EL) nr 305/2011 eespool nimetatud tootja ainuvastutusel.

Tootja poolt ja nimel allkirjastanud:

Alexander Zanocco, Müügidirektor ja Teadus- ja Arendustegevuse direktor

Dieter Pfaff, Rahvusvahelise tootmisföderatsiooni ja kvaliteedijuhtimise juht

Tumlingen, 2026-03-01

Toimivusdeklaratsioon on koostatud mitmes keeles. Kui tõlked on omavahel vastuolus, tuleb lähtuda ingliskeelsest versioonist.

Lisa sisaldab (keeleneutraalselt määratletud) juriidilisi nõudeid ületavat vabatahtlikku ja täiendavat teavet inglise keeles.

## Specific Part

### 1 Technical description of the product

The "fischer injection system FIS EM Plus" is a bonded fastener consisting of a cartridge with injection mortar fischer FIS EM Plus and a steel element according to Annex A5.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 or 100 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic                                                                 | Performance                                          |
|------------------------------------------------------------------------------------------|------------------------------------------------------|
| Characteristic resistance to tension load (static and quasi-static loading)              | See Annex B4 to B15, C1 to C19, C22, C24, C26 to C37 |
| Characteristic resistance to shear load (static and quasi-static loading)                | See Annex C1 to C4, C23, C25, C26                    |
| Displacements under short-term and long-term loading                                     | See Annex C20, C21, C38, C39                         |
| Characteristic resistance and displacements for seismic performance categories C1 and C2 | See Annex C40 to C50                                 |

#### 3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance          |
|--------------------------|----------------------|
| Reaction to fire         | Class A1             |
| Resistance to fire       | See Annex C51 to C54 |

#### 3.3 Hygiene, health and the environment (BWR 3)

| Essential characteristic                                 | Performance             |
|----------------------------------------------------------|-------------------------|
| Content, emission and/or release of dangerous substances | No performance assessed |

**4      Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with the European Assessment Document EAD 330499-02-0601-v01 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

**5      Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Installation conditions part 1

fischer Anchor rod FIS A / RG M (Anchor rod) and  
commercial standard threaded rod (Threaded rod)

Pre-positioned installation

Push through installation (annular gap filled with mortar)

Pre-positioned or push through installation with subsequently injected fischer filling disc FFD  
(annular gap filled with mortar)

Figures not to scale

$h_0$  = drill hole depth

$h_{ef}$  = effective embedment depth

$t_{fix}$  = thickness of fixture

fischer Injection System FIS EM PLUS

Product description  
Installation conditions part 1

Annex A1  
Appendix 3 / 28

Installation conditions part 2

fischer internal threaded anchor RG M I (fischer RG M I)

Pre-positioned installation

fischer internal threaded anchor FIS IG (fischer FIS IG)

Pre-positioned installation

Pre-positioned installation with subsequently injected fischer filling disc (annular gap filled with mortar)

Can be used in conjunction with fischer RG M I and fischer FIS IG.

Installation conditions part 3

Reinforcing bar (Rebar)

fischer rebar anchor FRA (fischer FRA)

Pre-positioned installation

Push through installation (annular gap filled with mortar)

Figures not to scale

$h_0$  = drill hole depth

$h_{ef}$  = effective embedment depth

$t_{fix}$  = thickness of fixture

$h_{nom}$  = overall fastener embedment depth in the concrete

fischer Injection System FIS EM PLUS

Product description  
Installation conditions part 3

Overview system components part 1

Injection cartridge (shuttle cartridge) FIS EM Plus with sealing cap  
Sizes: 390 ml, 585 ml, 1500 ml (the 390 ml hard cartridge is shown as an example)  
Size foil bag: 500 ml

Injection cartridge (coaxial cartridge) FIS EM Plus with sealing cap  
Sizes: 300 ml

Static mixer FIS MR Plus for injection cartridges  $\leq 500$  ml

Static mixer FIS UMR for injection cartridges  $\geq 500$  ml

Injection adapter and extension tube  $\varnothing 9$  for static mixer FIS MR Plus;  
Injection adapter and extension tube  $\varnothing 9$  or  $\varnothing 15$  for static mixer FIS UMR

Cleaning brush BS / BSB

Compressed-air cleaning tool ABP

Figures not to scale

<sup>1)</sup> no performance assessed.

**fischer Injection System FIS EM PLUS**

**Intended use**  
Specifications part 2

**Annex B2**  
Appendix 11 / 28

## Specifications of intended use part 3

### Base materials:

- Compacted reinforced or unreinforced normal weight concrete of strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021.
- Steel fibre reinforced concrete according to EN 206:2013+A2:2021 with steel fibers in accordance to EN 14889-1:2006, clause 5, group I, with a maximum fibre content of 80 kg/m<sup>3</sup>.

### Use conditions (Environmental conditions):

- Fastener intended for use in structures subject to dry, internal conditions (all materials).
- For all other conditions according to EN 1993-1-4:2006+A1:2015 corresponding to corrosion resistance classes to Annex A6 table A6.1 (metric sizes) or Annex A7 table A7.1 (fractional sizes).

### Design:

- Fastenings are designed in accordance with: EN 1992-4:2018 and TR 082 from June 2023.
- Fastenings in steel fibre reinforced concrete can be designed according to EN 1992-4:2018. The performance for normal weight concrete of strength classes C20/25 to C50/60 without fibres applies.
- The structural design is conducted under responsibility of a designer experienced in the field of anchorages and concrete works.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e. g. position of the fastener relative to reinforcement or to supports, etc.).

### Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Fastening depth should be marked and adhered to installation.
- Overhead installation is allowed (necessary equipment see installation instruction).

| High corrosion resistant steel HCR PC <sup>1)</sup> 80 | (      | Stainless steel R PC <sup>1)</sup> 50                  | ~ |
| Stainless steel R PC <sup>1)</sup> 80                  | *      |                                                        |   |

Alternatively: Colour coding according to DIN 976-1:2016

<sup>1)</sup> PC = property class

### Installation conditions:

**Threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:**

- Materials, dimensions and mechanical properties according to **Annex A6, Table A6.1**.
- Inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored.
- Setting depth is marked.
- Steel load-bearing capacities for hot-dip galvanised parts are only valid if the threaded rod and nut are correctly paired. The strength class of the nut must be one strength class higher than that of the threaded rod ( $\geq M12$  in combination with tolerance class 6AX in accordance with EN ISO 10684:2004+AC:2009 two strength classes higher). The pairing of undersized threaded rods (additional designation U according to EN ISO 10684) with oversized nuts (additional designation Z or X according to EN ISO 10684) is not permitted under any circumstances.

**Splitting failure** for minimum edge distance and spacing in dependence of the effective embedment depth  $h_{ef}$ .

For the calculation of minimum spacing and minimum edge distance of anchors in combination with different embedment depths and thicknesses of concrete members the following equation shall be fulfilled:

$$A_{sp,req} < A_{sp,t}$$

$A_{sp,req}$  = required projecting area,  
 $A_{sp,t}$  = projecting area (according to **Annex B8**).

**fischer Injection System FIS EM PLUS**

1) Both drill hole diameters can be used.

### Reinforcing bar

- The minimum value of related rib area  $f_{R,min}$  must fulfil the requirements of EN 1992-1-1:2004+AC:2010.
- The rib height must be within the range:  $0,05 \cdot \phi \leq h_{rib} \leq 0,07 \cdot \phi$   
( $\phi$  = Nominal diameter of the bar,  $h_{rib}$  = rib height).

| fischer centering clip DD-S / DD-E   |            |      |  | M12                               | M16              | M20  | M24  | M27  | M30  |
| fischer centering clip DD-S          | $h_{DD-S}$ | [mm] |  | 6,5                               | 8,0              | 9,0  | 10,0 | 10,0 | 10,0 |
| fischer centering clip DD-E          | $h_{DD-E}$ | [mm] |  | 12,0                              | 13,5             | 18,0 | 19,0 | 19,0 | 19,0 |
| Drill hole depth                     | $h_0$      | [mm] |  | $h_0 \geq h_{nom} + 3 \text{ mm}$ |                  |      |      |      |      |
| Minimum thickness of concrete member | $h_{min}$  | [mm] |  | $h_{nom} + 30$<br>(≥ 80)          | $h_{nom} + 2d_0$ |      |      |      |      |

The uppermost DD-S clip should be positioned approx. 5 - 10 mm below the concrete surface.

The effective embedment depth  $h_{ef}$  is calculated as follows when using the DD-S / DD-E clips.

$$h_{ef} = h_{nom} - h_{DD-E} - n \cdot h_{DD-S}$$

$n$  = number of DD-S clips used

Figures not to scale

## fischer Injection System FIS EM PLUS

### Intended use

Cleaning brush (steel brush)  
fischer centering clip DD-S / DD-E

<sup>1)</sup> Values in brackets are valid for undersized threaded rods with smaller stress area  $A_s$  for hot dip galvanised Threaded rods according to EN ISO 10684:2004+AC:2009.

<sup>2)</sup> In absence of other national regulations.

<sup>3)</sup> Only admissible for high corrosion resistant steel HCR, acc. to Table A6.1.

1) Calculation of effective displacement:

δ<sub>N0</sub> = δ<sub>N0-Factor</sub> · τ

δ<sub>N∞</sub> = δ<sub>N∞-Factor</sub> · τ

τ = acting bond strength under tension loading

2) Calculation of effective displacement:

δ<sub>V0</sub> = δ<sub>V0-Factor</sub> · V

δ<sub>V∞</sub> = δ<sub>V∞-Factor</sub> · V

V = acting shear loading

- 1) Not allowed for hollow drill bit.
- 2)  $f_{uk}$  respectively shall be taken from the specifications of the reinforcing bar.
- 3) In accordance with EN 1992-4:2018 section 7.2.2.3.1:  
 $k_6$  = 0,6 for fasteners made of carbon steel with  $f_{uk} \leq 500 \text{ N/mm}^2$ ,  
= 0,5 for fasteners made of carbon steel with  $500 \text{ N/mm}^2 < f_{uk} \leq 1000 \text{ N/mm}^2$ ,  
= 0,5 for fasteners made of stainless steel.

**Table C27.1: Characteristic resistance for concrete failure under tension / shear loading for fractional sizes**

1) Calculation of effective displacement:

$$\delta_{N0} = \delta_{N0\text{-Factor}} \cdot \tau$$

$$\delta_{N_{\infty}} = \delta_{N_{\infty}\text{-Factor}} \cdot \tau$$

$\tau$  = acting bond strength under tension loading

2) Calculation of effective displacement:

$$\delta_{V0} = \delta_{V0\text{-Factor}} \cdot V$$

$$\delta_{V_{\infty}} = \delta_{V_{\infty}\text{-Factor}} \cdot V$$

V = acting shear loading

Fire resistance to steel failure under tension and shear loading for fractional Threaded rods

**Annex C53**

Appendix 81 / 28

**Characteristic bond resistance for cracked concrete under fire conditions for metric and fractional Anchor rods and Threaded rods in hammer drilled holes with standard drill bit or hollow drill bit**

The characteristic bond resistance for cracked concrete under fire conditions for a given temperature.

$\tau_{Rk,fi}(\theta)$  has to be calculated by the following equation:

$$\tau_{Rk,fi}(\theta) = k_{fi,p}(\theta) \cdot \tau_{Rk,cr,C20/25}$$

- $\theta$  = Temperature in °C in the mortar layer,
- $\tau_{Rk,fi}(\theta)$  = Characteristic bond resistance for cracked concrete under fire exposure for a given temperature in N/mm² for concrete classes C20/25 to C50/60.
- $k_{fi,p}(\theta)$  = Reduction factor under fire conditions.
- $\tau_{Rk,cr,C20/25}$  = Characteristic bond resistance for cracked concrete C20/25 in N/mm², given in Table C6.1, Table C7.1, Table C29.1 to Table C31.1, respectively.
