

TOIMIVUSDEKLARATSIOON

DoP 0422

fischer süsteemsüsteemi FIS VB jaoks (liimankur kasutamiseks betoonis)

ET

1. Tootetüübi kordumatu identifitseerimiskood: DoP 0422
2. Kavandatud kasutusala(d): Hiljem paigaldatud kinnitused pragunenud või pragunemata betoonis, Vt lisa, eelkõige lisad B1 - B11.
3. Tootja: fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Saksamaa
4. Volitatud esindaia: –
5. Toimivuse püsivuse hindamise ja kontrolli süsteem: 1
6. Euroopa hindamisdokument: EAD 330499-02-0601; 2022-09 (Decision (EU) 2024/1944)
Euroopa tehniline hinnang: ETA-24/0274; 2026-08-19
Tehnilise hindamise asutus: 1020, TZUS - TECHNICKY A ZKUSEBNI USTAV STAVEBNI PRAHA s.p.
Teavitatud asutus(ed): 2873, Technische Universität Darmstadt, Institut für Stahlbau und Werkstoffmechanik
7. Deklareeritud toimivus:
Mehaaniline vastupidavus ja stabiilsus (BWR 1)
Iseloomulik vastupidavus tõmbekoormusele (staatiline ja kvasi-staatiline koormus):
 - 1) Vastupidavus terase purunemisele: Vt lisa, eelkõige lisad C1, C2
 - 2) Vastupidavus väljatõmbamisele ja betooni purunemisele: Vt lisa, eelkõige lisa C4
 - 3) Vastupidavus betoonikoonuse purunemisele Vt lisa, eelkõige lisa C3
 - 4) Servakaugus pragunemise vältimiseks koormuse all Vt lisa, eelkõige lisa C3
 - 5) Paigaldusprotsessi töökindlus Vt lisa, eelkõige lisad C3, C4
 - 6) Maksimaalne paigaldusmoment: Vt lisa, eelkõige lisad B3, B4
 - 7) Minimaalne servakaugus, vahekaugus ja elemendi paksus: Vt lisa, eelkõige lisad B3 - B5**Iseloomulik vastupidavus nihkekoormusele (staatiline ja kvasi-staatiline koormus)**
 - 8) Vastupidavus terase purunemisele: Vt lisa, eelkõige lisad C1, C2
 - 9) Vastupidavus väljaheite purunemisele: Vt lisa, eelkõige lisa C3
 - 10) Vastupidavus betoonserva purunemisele: Vt lisa, eelkõige lisa C3**Deformatsioonitegurid lühiajalise ja pikaajalise koormuse korral:**
 - 11) Deformatsioonitegurid lühiajalise ja pikaajalise koormuse korral: Vt lisa, eelkõige lisa C5
 - 12) Vastupidavus teraskiudbetoonis: NPd**Iseloomulik vastupidavus ja nihked seismilise toimivuse kategooriates C1 ja C2:**
 - 13) Tõmbekoormuse vastupidavus seismilise kategooria C1 korral NPd
 - 14) Tõmbekoormuse vastupidavus, kategooria C2 NPd
 - 15) Vastupidavus nihkekoormusele seismilise kategooria C1 korral NPd
 - 16) Vastupidavus nihkekoormusele ja nihketele seismilise kategooria C2 korral NPd**Ohutus tulekahju korral (BWR 2)**
 - 17) Reaktsioon tulele Klass (A1)**Tulekindlus:**
 - 18) Tulekindlus terase purunemise vastu (tõmbekoormus): NPd
 - 19) Tulekindlus sideme purunemisele tõmbekoormuse all NPd
 - 20) Tulekindlus terase purunemise vastu (nihkejõud): NPd**Hügieen, tervis ja keskkond (BWR 3)**
 - 21) Ohtlike ainete sisaldus, emissioon ja vabanemine NPd
8. Asjakohane tehniline dokumentatsioon ja/või tehniline eridokumentatsioon: –

Eespool kirjeldatud toote toimivus vastab deklareeritud toimivusele. Käesolev toimivusdeklaratsioon on välja antud kooskõlas määrusega (EL) nr 305/2011 eespool nimetatud tootja ainuvastutusel.

Tootja poolt ja nimel allkirjastanud:

Dr. Christian Weber, Arendusjuht

Dieter Pfaff, Rahvusvahelise tootmisföderatsiooni ja kvaliteedijuhtimise juht

Tumlingen, 2026-10-01

Toimivusdeklaratsioon on koostatud mitmes keeles. Kui tõlked on omavahel vastuolus, tuleb lähtuda ingliskeelsest versioonist. Lisa sisaldab (keeleneutraalselt määratletud) juriidilisi nõudeid ületavat vabatahtlikku ja täiendavat teavet inglise keeles.

Specific parts

1. Technical description of the product

The fischer injection system FIS VB for uncracked concrete is a bonded anchor consisting of a cartridge with injection mortar and a steel element. The steel element is galvanized or stainless steel threaded rod.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The illustration and the description of the product are given in Annex A.

2. Specification of the intended use in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	Annex C1 to C4
Characteristic resistance to shear load (static and quasi-static loading)	Annex C1 to C3
Displacements under short term and long term loading	Annex C5
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Satisfy the requirements for performance class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and environment (BWR 3)

No performance assessed.

4. Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

According to the Decision 96/582/EC of the European Commission the system of assessment verification of constancy of performance (see Annex IX to Regulation (EU) 2024/3110) is system 1.

Intended use Specifications part 1					

Specifications of intended use part 2

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206.

Use conditions (Environmental conditions):

- Fastener intended for use in structures subject to dry, internal conditions (all materials).
- For all other conditions according to EN 1993-1-4 corresponding to corrosion resistance classes to **Annex A5 Table A5.1**.

Design:

- Fastenings are designed in accordance with EN 1992-4.
- The structural design is conducted under responsibility of a designer experienced in the field of anchorages and concrete works.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.).

Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Fastening depth should be marked and adhered to installation.
- Overhead installation is allowed (necessary equipment see installation instruction).

Anchor rod / Threaded rod

Marking (on random place) fischer Anchor rod:

Steel zinc plated PC ¹⁾ 8.8	• or +	Steel hot-dip PC ¹⁾ 8.8	•
High corrosion resistant steel HCR PC ¹⁾ 50	•	High corrosion resistant steel HCR PC ¹⁾ 70	-
High corrosion resistant steel HCR PC ¹⁾ 80	(	Stainless steel R property class 50	~
Stainless steel R property class 80	*		

Alternatively: Colour coding according to DIN 976-1

¹⁾ PC = property class

Installation conditions:

Threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

- Materials, dimensions and mechanical properties according to **Annex A5, Table A5.1**.
 - Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored.
 - Setting depth is marked.
 - Hot-dip galvanized steel
- Steel load-bearing capacities for hot-dip galvanised parts are only valid if the threaded rod and nut are correctly paired. The strength class of the nut must be one strength class higher than that of the threaded rod ($\geq M12$ in combination with tolerance class 6AX in accordance with EN ISO 10684 two strength classes higher). The pairing of undersized threaded rods (additional designation U according to EN ISO 10684) with oversized nuts (additional designation Z or X according to EN ISO 10684) is not permitted under any circumstances.

Appendix 13 / 22

Table B8.1: Parameters of the fischer centering clip DD-S / DD-E

Anchor rods / Threaded rods			M12	M16	M20
fischer FIS IG			M8	M10	M12
fischer centering clip DD-S / DD-E			M12	M16	M20
fischer centering clip DD-S	h_{DD-S}	[mm]	6,5	8,0	9,0
fischer centering clip DD-E	h_{DD-E}	[mm]	12,0	13,5	18,0
Drill hole depth	h_0	[mm]	$h_0 \geq h_{nom} + 3 \text{ mm}$		
Overall fastener embedment depth	h_{nom}	[mm]	$h_{nom} \leq h_{ef,max}$		
Minimum thickness of concrete member	h_{min}	[mm]	$h_{nom} + 30 (\geq 100)$		$h_{nom} + 2d_0$

The uppermost DD-S clip should be positioned approx. 5 - 10 mm below the concrete surface.
The effective embedment depth h_{ef} is calculated as follows when using the DD-S / DD-E clips.

$$h_{ef} = h_{nom} - h_{DD-E} - n \cdot h_{DD-S}$$

n = number of DD-S clips used

Appendix 14 / 22

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole. Nominal drill hole diameter d_0 and drill hole depth h_0 see Tables B3.1 or B4.1 .		
2		Clean the drill hole: For $h_{ef} \leq 12d_{nom}$ and $d_0 < 18$ mm blow out the hole twice by hand.		For $h_{ef} > 12d_{nom}$ and / or $d_0 \geq 18$ mm blow out the hole twice with oil-free compressed air ($p \geq 6$ bar). Use suitable compressed-air nozzle
3		Brush the drill hole twice. For deep holes use an extension. Use suitable brushes (see Table B7.1).		
4		Clean the drill hole: For $h_{ef} \leq 12d_{nom}$ and $d_0 < 18$ mm blow out the hole twice by hand.		For $h_{ef} > 12d_{nom}$ and / or $d_0 \geq 18$ mm blow out the hole twice with oil-free compressed air ($p \geq 6$ bar). Use suitable compressed-air nozzle.

Intended use Installation instructions part 1				
Annex B9				
Appendix 15 / 22				

Installation instructions part 2

Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer Place the cartridge into the dispenser
6		Ensuring that the spiral inside the mixer is clearly visible.
7		Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey.

Go to step 8

Injection of the mortar

8		For $h_0 = h_{ef}$ fill approximately 2/3 of the drill hole with mortar. For $h_0 > h_{ef}$ more mortar is needed. Always begin from the bottom of the hole and avoid bubbles.
9		Push-through installation: the drill hole in the fixture must be also filled with mortar.
10		The conditions for mortar injection without extension tube can be found in Table B7.3.
		For overhead installation, deep holes ($h_0 > 250$ mm) use an injection-adaptor.

Go to step 11

fischer injection system FIS VB

Intended use
Installation instructions part 2

Annex B10

Appendix 16 / 22

Installation instructions part 3

Installation of Anchor rods / Threaded rods and fischer FIS IG

11		Only use clean and oil-free metal parts. Push the Anchor rod / Threaded rods with the setting depth mark or fischer FIS IG down to the bottom of the hole, turning it slightly while doing so. No turning movement is permitted when using the DD-S / DD-E centering clips. After inserting the metal parts, excess mortar must be emerged around the anchor element.
12	 For overhead installations support the metal part with wedges (e.g. fischer centering wedges or fischer overhead clips).	 For push-through installation fill the annular gap with mortar.
13	 Wait for the specified curing time t_{cure} see Table B7.2. The application with the anchor rod is shown as an example.	 14 Mounting the fixture max T_{inst} see Tables B3.1 and B4.1.
Option		After the minimum curing time is reached, the gap between metal part and fixture (annular clearance) may be filled with mortar via the fischer filling disc. Compressive strength $\geq 50 \text{ N/mm}^2$ (e.g. fischer injection mortars FIS VB, FIS HB, FIS SB, FIS V Plus, FIS EM Plus). ATTENTION: Using fischer filling disc reduces t_{fix} (usable length of the Anchor).
