

## DÉCLARATION DES PERFORMANCES

### DoP 0312

pour fischer DuoXpand (Cheville plastique pour l'utilisation dans le béton et la maçonnerie)

FR

1. Code d'identification unique du type de produit: **DoP 0312**
2. Usage(s) prévu(s): **Cheville plastique pour usage multiple dans le béton et la maçonnerie pour applications non structurelles (catégorie d'utilisation a, b, c, d); voir annexes, en particulier les annexes B1 - B5.**
3. Fabricant: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Allemagne**
4. Mandataire: **-**
5. Système(s) d'évaluation et de vérification de la constance des performances: **2+**
6. Document d'évaluation européen: **EAD 330284-00-0604, édition 12/2020**  
Evaluation Technique Européenne: **ETA-21/0324; 2022-08-25**  
Organisme d'évaluation technique: **DIBt- Deutsches Institut für Bautechnik**  
Organisme(s) notifié(s): **2873 TU Darmstadt**
7. Performance(s) déclarée(s):  
**Résistance mécanique et stabilité (BWR 4)**  
Résistance à la rupture de l'acier sous charge de traction: Annexe C1  
Résistance à la rupture de l'acier ou du polymère sous charge de cisaillement: Annexe C1  
Résistance à l'extraction glissement ou à la rupture du béton ou à la rupture du polymère sous charge de traction (groupe du matériau support a): Annexe C1  
Résistance dans toutes les directions de charge sans bras de levier (groupes du matériau support b, c, d): Annexes C7 - C13  
Distance au bord et entraxe (groupe du matériau support a): Annexe B2  
Distance au bord et entraxe (groupes du matériau support b, c, d): Annexes B3 - B4  
Déplacements sous charge à court et long terme : Annexe C2  
  
Durabilité: Annexe B1  
  
**Sécurité en cas d'incendie (BWR 2)**  
Réaction au feu: Classe A1  
Résistance au feu: NPD
8. Documentation technique appropriée et/ou documentation technique spécifique: **-**

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

Dr.-Ing. Oliver Geibig, Directeur Général Business Units & Ingénierie  
Tumlingen, 2022-09-19

Jürgen Grün, Directeur Général Chimie & Qualité

Cette DoP a été préparée en plusieurs langues. En cas de différend relatif à l'interprétation, la version anglaise prévaudra.

L'annexe comprend des informations volontaires et complémentaires en langue anglaise dépassant les exigences légales (spécifiées de manière neutre).

## Specific part

### 1 Technical description of the product

The fischer frame fixing DuoXpand 8 and DuoXpand 10 is a plastic anchor consisting of a plastic sleeve made of polyamide and polyoxymethylene and an accompanying specific screw of galvanised steel, of galvanised steel with an additional organic layer or of stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	No performance assessed

#### 3.2 Mechanical resistance and stability (BWR 4)

Essential characteristic	Performance
Resistance to steel failure under tension loading	See Annex C 1
Resistance to steel failure under shear loading	See Annex C 1
Resistance to pull-out or concrete failure under tension loading (base material group a)	See Annex C 1
Resistance in any load direction without lever arm (base material group b, c, d)	See Annexes C 7 – C 13
Edge distance and spacing (base material group a)	See Annex B 2
Edge distance and spacing (base material group b, c, d)	See Annex B 3 and B 4
Displacements under short-term and long-term loading	See Annex C 2
Durability	See Annex B 1

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with European Assessment Document EAD 330284-00-0604 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

## Installed anchor DuoXpand

### Legend

- $d_0$  = Nominal drill hole diameter
- $h_{nom}$  = Overall plastic anchor embedment depth in the base material
- $h_1$  = Depth of drill hole to deepest point
- $h$  = Thickness of member (base material)
- $t_{fix}$  = Thickness of fixture and / or non-load-bearing layer

### Anchor sleeves – flat collar version DuoXpand 8 and 10

Marking:

Brand

Anchor type

Size

e.g.  DuoXpand 10x120

e.g.  DuoXpand 10x180

### Countersunk version DuoXpand 8 and 10

### Long version DuoXpand 10 with flat collar – countersunk version also available

### Special screws

#### Countersunk screw

#### Hexagonal screw with washer

#### Hexagonal screw

1) Additional marking for the special screw, stainless steel version: e.g. "A4" or "R" or "A2".

2) Internal driving feature for TX bit is optional for hexagonal head.

3) Optional additional version with underhead ribs.

## Specifications of intended use

### Anchorage subject to:

- Static and quasi-static loads: DuoXpand 8 und DuoXpand 10.
- Redundant non-structural systems.

### Base materials:

- Reinforced or unreinforced compacted normal weight concrete without fibres, strength classes  $\geq$  C12/15 (base material group "a"), as per EN 206, see Annex C 1 and C 3.
- Solid brick masonry (base material group "b") as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 3, C 7 and C 8.  
Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow brick masonry (base material group "c"), as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 3 – C 6 and C 8 – C 12.
- Reinforced autoclaved aerated concrete (base material group "d"), as per EN 12602, and unreinforced autoclaved aerated concrete (base material group "d") as per EN 771-4, see Annex C 3 + C 13.
- Mortar strength class of the masonry  $\geq$  M2,5 in accordance with EN 998-2.
- For other comparable base materials of the base material group "a", "b", "c" and "d" the characteristic resistance of the anchor may be determined by job site tests in accordance with TR 051.

### Temperature Range:

- c: - 40 °C to 50 °C (max. short term temperature + 50 °C and max long term temperature + 30 °C)
- b: - 40 °C to 80 °C (max. short term temperature + 80 °C and max long term temperature + 50 °C)

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: Special screw made of zinc coated steel or stainless steel.
- The specific screw made of galvanised steel or galvanised steel with an additional organic layer may also be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore, there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e.g. undercoating or body cavity protection for cars).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist: Special screw made of stainless steel of corrosion resistance class CRC III.

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

### Design:

- The anchorages are to be designed in accordance with TR 064 under the responsibility of an engineer experienced in anchorages and concrete/masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.

### Installation:

- Hole drilling by the drilling method in accordance with Annex C 1 for base material group "a", and in accordance with Annexes C 7 – C 13 for base material group "b", "c" and "d".
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature: - 20 °C to + 40 °C.
- Exposure to UV due to solar radiation of the anchor not protected by rendering  $\leq$  6 weeks.
- No ingress of water in the borehole at temperatures  $<$  0°C.

## Installation instructions

The following pictures show fixing through timber in concrete and hollow brick

Summary of all kind of masonry bricks see Annex C 3 – C 6.

### Solid bricks

### Hollow or perforated bricks

1. Drill the bore hole as per Table B2.1 using the drilling method described in the corresponding Annex C.

For application in hollow or perforated bricks, removal of bore dust is not necessary.

2. For use in base material group "a" (concrete), "b" (solid bricks), "d" (autoclaved aerated concrete): Remove dust from borehole.

3. Insert anchor (screw and sleeve) by using a hammer until the collar of the plastic sleeve is flush with the surface of the fixture.

4. The screw is screwed-in until the head of the screw touches the sleeve. The anchor is correctly installed, if the head of the screw fits tight on the surface and nor the anchor sleeve neither the screw cannot be turned-in any further.

5. Correctly installed anchor.
