Specific Part

1 Technical description of the product

The fischer Highbond-Anchor FHB / FHB dyn / FDA is a bonded expansion fastener consisting of an injection cartridge FIS HB and a steel element. The steel element is made of zinc plated or stainless steel.

The load transfer is realized by mechanical interlock of several cones in the bonding mortar and a combination of bonding and friction forces in the concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1 to C 3, B 5 to B 8
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 and C 2
Displacements under short-term and long-term loading	See Annex C 3
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

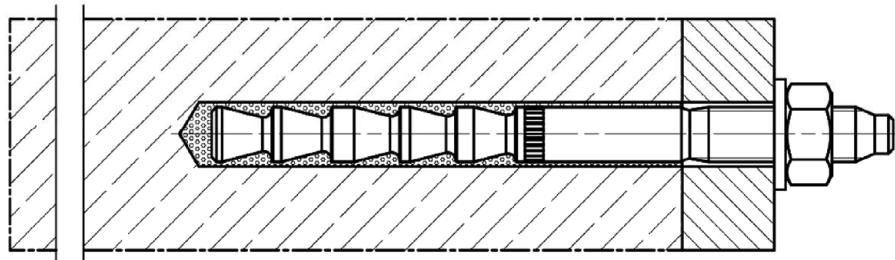

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Specifications of intended use (part 4)

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibers of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016+A2:2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc plated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN 1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 11 table A11.1 (FHB / FHB N) or Annex A 12 table A12.1 (FHB dyn).

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed in accordance with:
 - EN 1992-4:2018 and
 - EOTA Technical Report TR 055, Edition February 2018

Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: The hole shall be filled with mortar.
- Overhead installation is allowed.

Installation instructions part 1; Drilling and cleaning FHB, FHB N, FHB dyn and FDA

Drilling and cleaning the drill hole (hammer drilling with standard drill bit)

1a	 <p>Drill the hole. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables: FHB / FHB N → table B5.1 FHB dyn → table B6.1 FDA → table B8.1</p>
2a	 <p>Clean the drill hole. Blow out the drill hole twice For drill hole diameter $d_0 < 24 \text{ mm}$ blow out the hole by hand or oil-free compressed air ($\geq 6 \text{ bar}$). For drill hole diameter $d_0 \geq 24 \text{ mm}$ blow out the hole with oil-free compressed air ($\geq 6 \text{ bar}$). Use a cleaning nozzle.</p> 
3a	 <p>Brush the drill hole twice with steel brush. Corresponding brushes see table B9.1</p>
4a	 <p>Clean the drill hole. Blow out the drill hole twice For drill hole diameter $d_0 < 24 \text{ mm}$ blow out the hole by hand or oil-free compressed air ($\geq 6 \text{ bar}$). For drill hole diameter $d_0 \geq 24 \text{ mm}$ blow out the hole with oil-free compressed air ($\geq 6 \text{ bar}$). Use a cleaning nozzle.</p> 

Go to step 5a (Annex B 13)

Drilling and cleaning the drill hole (hammer drilling with hollow drill bit)

1b	 <p>Check a suitable hollow drill (see table B1.1, B2.1 resp. B3.1) for correct operation of the dust extraction</p>
2b	 <p>Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data. Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables: FHB / FHB N → table B5.1 FHB dyn → table B6.1 FDA → table B8.1</p>

Preparing the cartridge

5a		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6a		Place the cartridge into the dispenser
7a		Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

8a

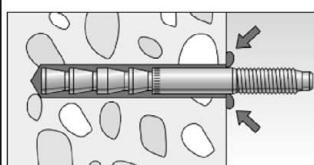

Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles. For drill hole depth $h_0 \geq 150$ mm use an extension tube. For overhead installation or deep holes ($h_0 > 250$ mm) use an injection adapter.

9a

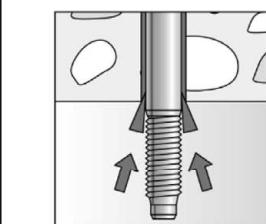

Push the anchor rod down to the bottom of the hole, turning it slightly while doing so. Only use clean and oil-free metal parts.

After inserting the anchor rod, excess mortar must be emerged around the anchor element.

If not, pull out the anchor rod immediately and reinject mortar.

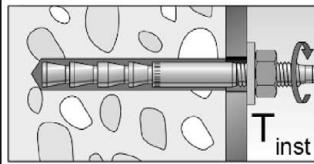

For overhead installations support the anchor rod with wedges.
(e.g. fischer centering wedges)

10a

Wait for the specified curing time t_{cure}
see **table B9.2**

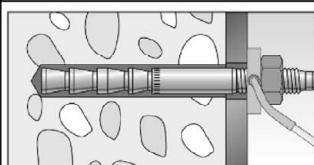

11a

Attach the fixture and install the washer and hexagon nut.
Ensure the correct position of the metal parts.
Tighten the hexagon nut with installation torque T_{inst} (see **table B5.1**).

12a

Option

The gap between metal parts and fixture (annular gap) may be filled with mortar (FIS HB) via the fischer filling disc.
ATTENTION: Using fischer filling disc reduces t_{fix} (usable length of the anchor)

For drill hole depth $h_0 \geq 150$ mm use an extension tube. For overhead installation or deep holes ($h_0 > 250$ mm) use an injection adapter.

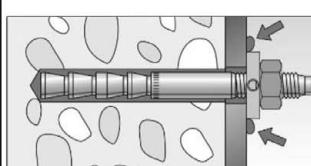

9b

Push the pre-assembled fischer anchor rod (with fischer filling disc and hexagon nut) into the drill hole until the fischer filling disc is in full contact with the surface, turning it slightly while doing so.

Ensure the correct position of the metal parts.

Only use clean and oil-free metal parts.

After inserting the pre-assembled anchor rod, excess mortar must be emerged around the fischer filling disc (minimum on one point).

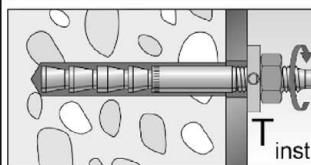

If not, pull out the assembled anchor rod immediately and reinject mortar.
