Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

Dr.-Ing. Oliver Geibig, Directeur Général Business Units & Ingénierie  
Tumlingen, 2023-01-17

Jürgen Grün, Directeur Général Chimie & Qualité

Cette DoP a été préparée en plusieurs langues. En cas de différend relatif à l'interprétation, la version anglaise prévaudra.

L'annexe comprend des informations volontaires et complémentaires en langue anglaise dépassant les exigences légales (spécifiées de manière neutre).

## 1. Technical description of the product

The Fischer hollow ceiling anchor FHY is a torque-controlled expansion anchor made of galvanised or stainless steel. It consists of an expansion sleeve and a cone with an internal thread and is anchored by torque-controlled expansion with a hexagon head bolt or threaded rod with nut and washer.

By tightening the screw/nut, the cone is pulled into the expansion sleeve and expanding it. The product description is given in Annex 1.

## 2. Specification of the intended use in accordance with the applicable EAD

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

## 3. Performance of the product and references to the methods used for its assessment

### 3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1 according to EN 13501-1
Resistance to fire	See Annex C 2 and Annex C 3

### 3.2 Safety and accessibility in use (BWR 4)

Essential characteristic	Performance
Characteristic resistance for all load directions and modes of failure for simplified design	See Annex C 1
Durability	See Annex B 1

## 4. Assessment and verification of constancy of performance (AVCP) system applied with reference to its legal base

According to the Decision 97/463/EC of the European Commission<sup>1</sup>, the system 2+ of assessment verification of constancy of performance (see Annex V to the Regulation (EU) No 305/2011) apply.

- 1 Hexagon screw
- 2 Washer
- 3 Expansion sleeve
- 4 Cone nut
- 5 Hexagon nut

## Specifications of intended use

### Fastenings subject to:

Size	FHY, FHY R			
	M6	M8	M10	M12
Hammer drilling with standard drill bit 			✓	
Hammer drilling with hollow drill bit with automatic cleaning 			✓	
Static and quasi-static loads				
Cracked and uncracked concrete			✓	
Fire exposure				

### Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206-1:2013+A1:2016
- Strength classes  $\geq$  C20/25 according to EN 206-1:2013+A1:2016
- Prestressed hollow core slabs, where the cavity width does not exceed 4,2 times the web width ( $b_H \leq 4,2 \times b_{St}$ ) with strength classes  $\geq$  C45/55

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (FHY, FHY R)
- For all other conditions according to EN 1993-1-4:2006 + A1:2015 corresponding to corrosion resistance class
  - CRC III: FHY R

### Design:

- Fastenings are to be designed under the responsibility of an engineer experienced in fastenings and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.)
- Design under static or quasi-static actions shall be performed in accordance with EN 1992-4:2018, design method B

**Table B2.1: Installation parameters**

Size		FHY, FHY R					
		M6	M8	M10	M12		
Nominal drill hole diameter	$d_0 =$	10	12	16	18		
Effective embedment depth	$h_{ef} \geq$	30	35	40	40		
Depth of drill hole to deepest point	$h_1 \geq$	50	60	65	70		
Diameter of clearance hole in the fixture	$d_f \leq$	7	9	12	14		
Length of screw <sup>1)</sup>	$l_s \geq$	$37 + t_{washer} + t_{fix}$	$43 + t_{washer} + t_{fix}$	$52 + t_{washer} + t_{fix}$	$55 + t_{washer} + t_{fix}$		
Length of the threaded bolt	$l_b \geq$	$42 + t_{washer} + t_{fix}$	$50 + t_{washer} + t_{fix}$	$60 + t_{washer} + t_{fix}$	$65 + t_{washer} + t_{fix}$		
Required setting torque	FHY FHY R	$T_{inst} =$	[Nm]	8 15	10 20	20 40	30 50

<sup>1)</sup> For screws with shaft according to EN ISO 4017:2014 the shaft length must be  $\leq t_{fix}$

Pre-stressed hollow core slab $\geq$ C45/55 web thickness $\geq$ 25mm						
Minimum spacing	$s_{min} \geq$	[mm]	70	70	80	80
Minimum edge distance	$c_{min} \geq$	[mm]	100	100	100	150
Solid concrete $\geq$ C20/25						
Minimum spacing	$s_{min} \geq$	[mm]	70	70	80	80
Minimum edge distance	$c_{min} \geq$	[mm]	100			
Minimum thickness of concrete member	$h_{min} \geq$	[mm]	100			

Anchoring in precast pre-stressed concrete hollow concrete slabs and in area of solid material

- $s_p$  = Distance to the tensioning strands
- $t_{fix}$  = Thickness of the fixture
- $d_u$  = Thickness of the slab web
- $c$  = Edge distance

Appendix 5 / 10

Anchor configuration Condition:  $b_H \leq 4,2 \times b_{St}$

$s_{min}$  and  $C_{min}$  see Annex B 2.  $s_{cr}$  see Annex C 1

Area where no anchoring is allowed

The anchoring must have a distance from the anchor axis to the tensioning strands of at least 50 mm

(Fig. not to scale)

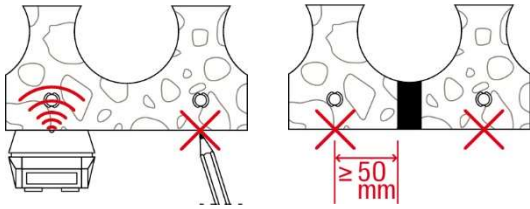

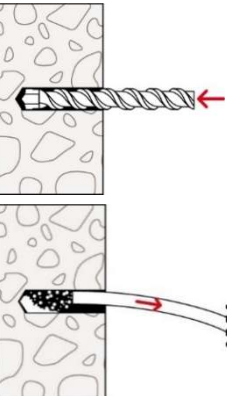

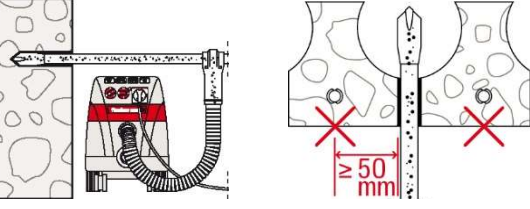

fischer hollow ceiling anchor FHY

**Intended use**  
Installation parameters

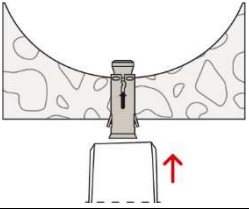

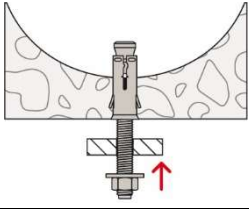

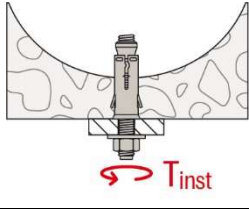

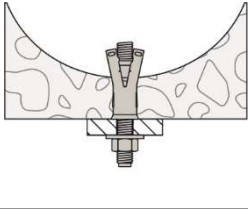

**Annex B 3**  
Appendix 6 / 10

**Installation instructions:**

- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on the site
- Hammer or hollow drilling
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole in solid material: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application
- In Precast pre-stressed hollow core slabs the anchor FHY may be installed from all directions, if the web thicknesses is ≥ 25mm and the spacing to the tensioning strands of ≥ 50mm is observed (also in the area of solid material)

<p>1a) Hammer drill (e.g. fischer Quattric II)</p>		 <p><b>Prestressed hollow core slabs:</b> Determine and mark the position of the tensioning strands, e.g. with a suitable scanner.</p>	 <p><b>Solid material/solid areas of hollow core slabs</b></p>
<p>1b) Hollow drill (e.g. fischer FHD)</p>		 <p>Drill the hole with automatic cleaning (e.g. fischer FVC)</p>	<p>-</p>
