

## DÉCLARATION DES PERFORMANCES

### DoP 0365

pour le système d'injection fischer FIS RC II (résine pour les scellements d'armatures rapportées)

FR

1. Code d'identification unique du type de produit: **DoP 0365**
2. Usage(s) prévu(s): **Système pour les scellements d'armatures rapportées pour utilisation dans le béton, Voir annexes, en particulier les annexes B1-B11.**
3. Fabricant: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Allemagne**
4. Mandataire: **-**
5. Système(s) d'évaluation et de vérification de la constance des performances: **1**
6. Document d'évaluation européen: **EAD 330087-01-0601 Edition 06/2021**  
Evaluation Technique Européenne: **ETA-22/0502; 2024-06-10**  
Organisme d'évaluation technique: **DIBt- Deutsches Institut für Bautechnik**  
Organisme(s) notifié(s): **2873 TU Darmstadt**
7. Performance(s) déclarée(s):  
**Résistance mécanique et stabilité (BWR 1)**  
**Résistance caractéristique sous charge statique et quasi statique:**  
Résistance d'adhérence des armatures rapportées: Annexes C1, C2  
Facteur de réduction: Annexes C1, C2  
Facteur d'augmentation profondeur d'ancre minimum: Annexes C1, C2  
Résistance caractéristique à la rupture de l'acier sous charge de traction du fer à béton: Annexe C5  
  
**Résistance caractéristique sous charge sismique:**  
Contrainte d'adhérence et coefficient de réduction sous charge sismique: Annexes C3, C4  
Enrobage minimum sous charge sismique: Annexe B5  
  
**Sécurité en cas d'incendie (BWR 2)**  
Réaction au feu: Classe (A1)  
  
**Résistance au feu:**  
Contrainte ultime d'adhérence sous exposition au feu pour les scellements d'armatures rapportées évalués pour 50 ans: Annexe C6  
Contrainte ultime d'adhérence sous exposition au feu pour les scellements d'armatures rapportées évalués pour 100 ans: Annexe C6  
Résistance caractéristique à la rupture de l'acier sous charge de traction du fer à béton sous exposition au feu: Annexe C5
8. Documentation technique appropriée et/ou documentation technique spécifique: **-**

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

## **Specific Part**

### **1      Technical description of the product**

The subject of this European Technical Assessment is the post-installed connection, by anchoring or overlap connection joint, of reinforcing bars (rebars) in existing structures made of normal weight concrete, using the "Rebar connection with injection system FIS RC II" in accordance with the regulations for reinforced concrete construction.

Reinforcing bars made of steel with a diameter  $\phi$  from 8 to 40 mm or the fischer rebar anchor FRA or FRA HCR of sizes M12 to M24 according to Annex A and injection mortar FIS RC II are used for rebar connections. The rebar is placed into a drilled hole filled with injection mortar and is anchored via the bond between rebar, injection mortar and concrete.

The product description is given in Annex A.

### **2      Specification of the intended use in accordance with the applicable European assessment Document**

The performances given in Section 3 are only valid if the rebar connection is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the rebar connections of at least 50 and/or 100 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### **3      Performance of the product and references to the methods used for its assessment**

#### **3.1    Mechanical resistance and stability (BWR 1)**

<b>Essential characteristic</b>	<b>Performance</b>
Characteristic resistance under static and quasi-static loading	See Annex C 1, C 2 and C 5
Characteristic resistance under seismic loading	See Annex B 5, C 3 and C 4

#### **3.2    Safety in case of fire (BWR 2)**

<b>Essential characteristic</b>	<b>Performance</b>
Reaction to fire	Class A1
Resistance to fire	See Annex C 5 and C 6

### **4      Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

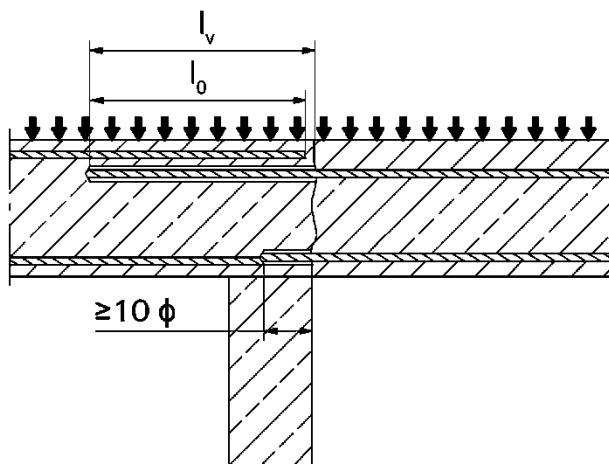

In accordance with European Assessment Document EAD No. 330087-01-0601, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

## Installation conditions and application examples reinforcing bars, part 1

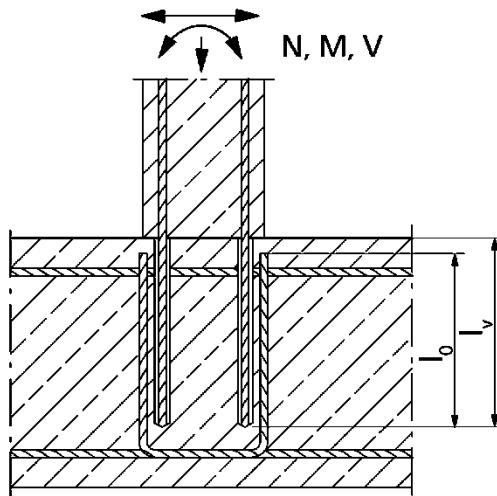

**Figure A1.1:**

Overlap joint with existing reinforcement for rebar connections of slabs and beams

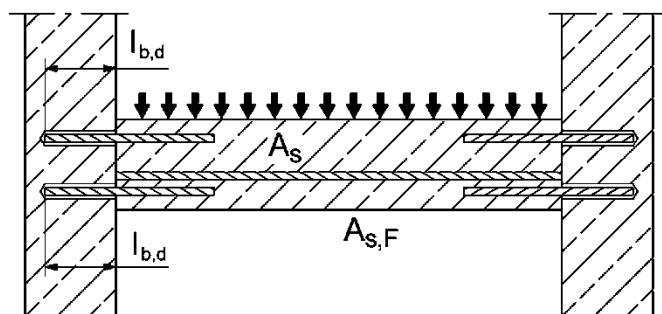

**Figure A1.2:**

Overlap joint with existing reinforcement at a foundation of a column or wall where the rebars are stressed

**Figure A1.3:**

End anchoring of slabs or beams (e.g. designed as simply supported)

Installation conditions and application examples reinforcing bars, part 1

#### Annex A1

## Installation conditions and application examples reinforcing bars, part 2

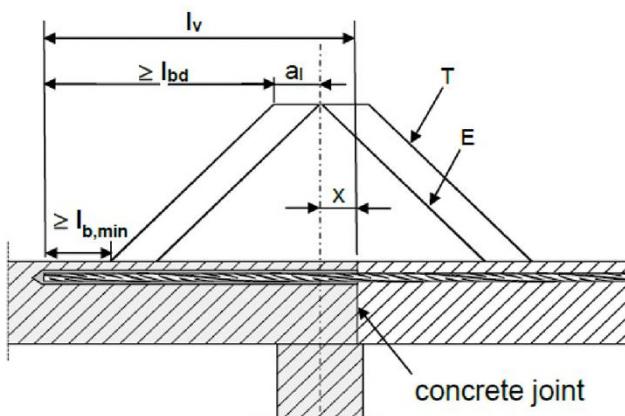

**Figure A2.1:**

Rebar connection for stressed primarily in compression

**Figure A2.2:**

Anchoring of reinforcement to cover the enveloped line of acting tensile force in the bending member

(only post-installed rebar is plotted)

Key to Figure

- T Acting tensile force
- E Envelope of  $M_{ed} / z + N_{ed}$  (see EN 1992-1-1:2011)
- x Distance between the theoretical point of support and concrete joint

Note to figure A1.1 to A1.3 and figure A2.1 to A2.2

In the figures no traverse reinforcement is plotted, the transverse reinforcement as required by EN 1992-1-1:2011 shall be present.

The shear transfer between old and new concrete shall be designed according to EN 1992-1-1:2011

Preparation of joints according to Annex B 3 of this document.

## Installation conditions and application examples fischer rebar anchor FRA

**Figure A3.1:**

Lap to a foundation of a column under bending.

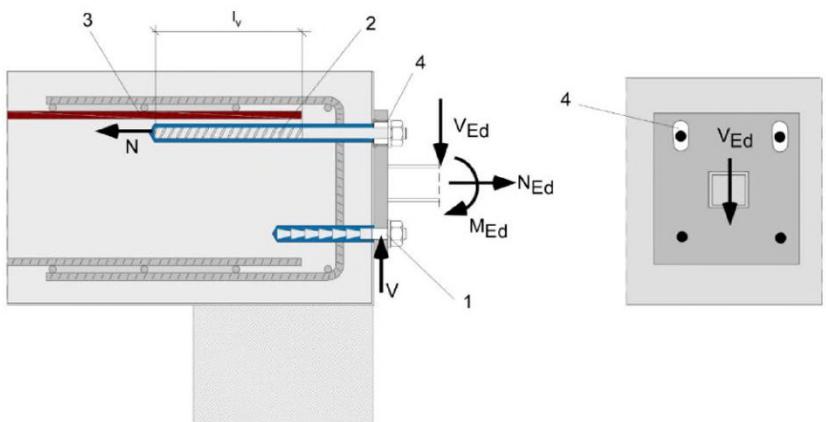

1. Shear lug (or fastener loaded in shear)
2. fischer rebar anchor FRA (tension only)
3. Existing stirrup / reinforcement for overlap (lap splice)
4. Slotted hole

**Figure A3.2:**

Lap of the anchoring of guardrail posts or anchoring of cantilevered building components.

In the anchor plate, the drill holes for the fischer rebar anchors FRA have to be designed as slotted holes with axial direction to the shear force.

1. Fastener for shear load transfer
2. fischer rebar anchor FRA (tension only)
3. Existing stirrup / reinforcement for overlap (lap splice)
4. Slotted hole

The required transverse reinforcement acc. to EN 1992-1-1:2011 is not shown in the figures. **The fischer rebar anchor FRA may be only used for axial tensile force.** The tensile force must be transferred by lap to the existing reinforcement of the building. The transfer of the shear force has to be ensured by suitable measure, e.g. by means of shear force or anchors with European Technical Assessment (ETA).

## Overview system components

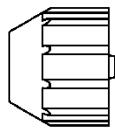

### Injection cartridge (shuttle cartridge) FIS RC II with sealing cap; Sizes: 360 ml, 825 ml

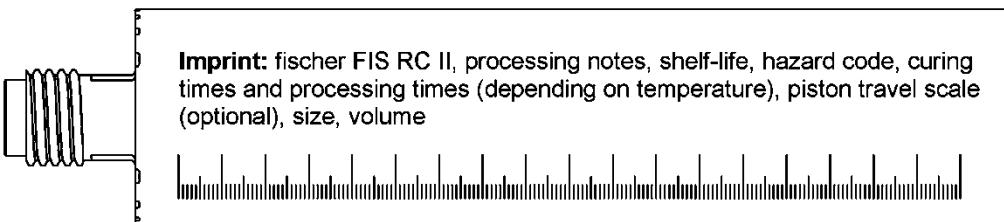

**Imprint:** fischer FIS RC II, processing notes, shelf-life, hazard code, curing times and processing times (depending on temperature), piston travel scale (optional), size, volume

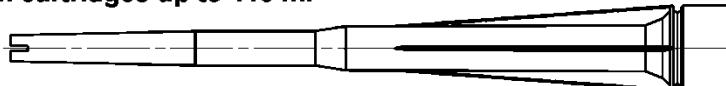

### Injection cartridge (coaxial cartridge) FIS RC II with sealing cap; Sizes: 300 ml, 380 ml, 400 ml, 410 ml

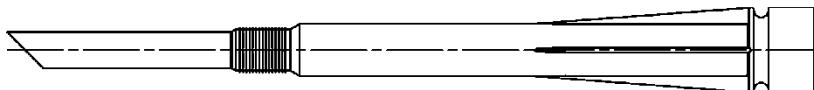

**Imprint:** fischer FIS RC II, processing notes, shelf-life, hazard code, curing times and processing times (depending on temperature), piston travel scale (optional), size, volume

### Static mixer FIS MR Plus for injection cartridges up to 410 ml

### Static mixer FIS JMR for injection cartridges 825 ml

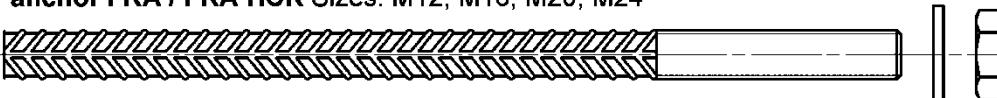

### Injection adapter and extension tube Ø 9 for static mixer FIS MR Plus; Injection adapter and extension tube Ø 9 or Ø 15 for static mixer FIS JMR

### Reinforcing bar (rebar) Sizes: Ø8, Ø10, Ø12, Ø14, Ø16, Ø18, Ø20, Ø22, Ø24, Ø25, Ø28, Ø30, Ø32, Ø40 marking setting depth

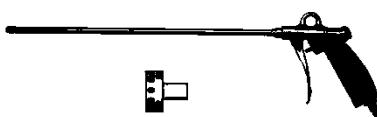

### fischer rebar anchor FRA / FRA HCR Sizes: M12, M16, M20, M24

### Blow out pump AB G

### Compressed-air cleaning tool ABP with fischer compressed-air nozzle

## Properties of reinforcing bars (rebar)

**Figure A5.1:**

- The minimum value of related rib area  $f_{R,\min}$  according to EN 1992-1-1:2011
- The maximum outer rebar diameter over the ribs shall be:
  - The nominal diameter of the bar with rib  $\phi + 2 \cdot h$  ( $h \leq 0,07 \cdot \phi$ )
  - ( $\phi$ : Nominal diameter of the bar;  $h_{\text{rib}}$  = rib height of the bar)

**Table A5.1: Installation conditions for rebars**

Nominal diameter of the bar	$\phi$	8 <sup>1)</sup>	10 <sup>1)</sup>	12 <sup>1)</sup>	14	16	18	20	22	24	25 <sup>1)</sup>	28	30	32	40
Nominal drill hole diameter	$d_0$	10	12	12	14	14	16	18	20	25	25	30	30	35	35
Drill hole depth	$h_0$											$h_0 = l_v$			
Effective embedment depth	$l_v$											acc. to static calculation			
Minimum thickness of concrete member	$h_{\min}$				$l_v + 30$ ( $\geq 100$ )							$l_v + 2d_0$			

<sup>1)</sup> Both drill hole diameters can be used.

Intended use Specifications part 1							

## Specifications of intended use part 2

### Anchorage subject to:

- Static and quasi-static loading: reinforcing bar (rebar) size 8 mm to 40 mm; FRA M12 to M24.
- Characteristic resistance under seismic loading: reinforcing bar (rebar) size 8 mm to 40 mm.
- 50 and 100 years working life under seismic loading: reinforcing bar (rebar) size 8 mm to 40 mm.
- Resistance to fire: reinforcing bar (rebar) size 8 mm to 40 mm; FRA M12 to M24.

### Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013+A1:2016.
- Concrete strength classes C12/15 to C50/60 according to EN 206:2013+A1:2016.
- Maximum chloride content of 0,40 % (CL 0.40) related to the cement content according to EN 206:2013+A1:2016.
- Non-carbonated concrete  
Note: In case of a carbonated surface of the existing concrete structure the carbonated layer shall be removed in the area of the post-installed rebar connection with a diameter of  $\phi + 60$  mm prior to the installation of the new rebar. The depth of concrete to be removed shall correspond to at least the minimum concrete cover in accordance with EN 1992-1-1:2011. The foregoing may be neglected if building components are new and not carbonated and if building components are in dry conditions.

### Use conditions (Environmental conditions) for fischer rebar anchors FRA

- For all conditions according to EN1993-1-4:2006+A1:2015 corresponding to corrosion resistance classes to Annex A6 Table A6.2.

### Design:

- Fastenings are designed under the responsibility of an engineer experienced in fastenings and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the forces to be transmitted.
- Design according to EN 1992-1-1:2011; EN 1992-1-2:2011 and Annex B3 and B4.
- The actual position of the reinforcement in the existing structure shall be determined on the basis of the construction documentation and taken into account when designing.

### Installation:

- The installation of post-installed rebar respectively fischer rebar anchor FRA shall be done only by suitable trained installer and under Supervision on site; the conditions under which an installer may be considered as suitable trained and the conditions for Supervision on site are up to the Member States in which the installation is done.
- Check the position of the existing rebars (if the position of existing rebars is not known, it shall be determined using a rebar detector suitable for this purpose as well as on the basis of the construction documentation and then marked on the building component for the overlap joint).

Appendix 9 / 24

## General construction rules for post-installed rebars

**Figure B3.1:**

- Only tension forces in the axis of the rebar may be transmitted.
- The transfer of shear forces between new concrete and existing structure shall be designed additionally according to EN 1992-1-1:2011.
- The joints for concreting must be roughened to at least such an extent that aggregate protrude.

<sup>1)</sup> If the clear distance between lapped bars exceeds  $4\phi$  but at least 50 mm then the lap length shall be increased by the difference between the clear bar distance and  $4\phi$  but at least 50 mm.

$c$	concrete cover of post-installed rebar
$c_1$	concrete cover at end-face of existing rebar
$c_{min}$	minimum concrete cover according to <b>Table B5.1</b> and to EN 1992-1-1:2011, Section 4.4.1.2
$\phi$	nominal diameter of reinforcing bar
$l_0$	lap length, according to EN 1992-1-1:2011 for static loading and according to EN 1998-1: 2004+AC:2009, section 5.6.3 for seismic action
$l_v$	effective embedment depth, $\geq l_0 + c_1$
$d_0$	nominal drill bit diameter, see <b>Annex B6</b>

# General construction rules for post-installed fischer rebar anchors FRA

**Figure B4.1:**

- Only tension forces in the axis of the fischer rebar anchor FRA may be transmitted.
- The tension force must be transferred via an overlap joint to the reinforcement in the building part.
- The transmission of the shear load shall be ensured by appropriate additional measures, e.g. by shear lugs or by anchors with a European Technical Assessment (ETA).
- In the anchor plate, the holes for the tension anchor shall be executed as slotted holes with the axis in the direction of the shear force.

<sup>1)</sup> If the clear distance between lapped bars exceeds  $4 \phi$  but at least 50 mm then the lap length shall be increased by the difference between the clear bar distance and  $4 \phi$  but at least 50 mm.

$c$	concrete cover of post-installed fischer rebar anchor FRA
$c_1$	concrete cover at end-face of existing rebar
$c_{\min}$	minimum concrete cover according to <b>Table B5.1</b> and to EN 1992-1-1:2011, Section 4.4.1.2
$\phi$	nominal diameter of reinforcing bar
$l_0$	lap length, according to EN 1992-1-1:2011, Section 8.7.3
$l_{e,\text{ges}}$	overall embedment depth, $\geq l_0 + l_e$
$d_0$	nominal drill bit diameter, see <b>Annex B6</b>
$l_e$	length of the bonded in threaded part
$t_{\text{fix}}$	thickness of the fixture
$l_v$	effective embedment depth

### Rebar connection with injection system FIS RC II

#### Intended use

Working times and curing times;

Installation tools for drilling and cleaning the bore hole and injection of the mortar

#### Annex B6

## Safety regulations

Review the Safety Data Sheet (SDS) before use for proper and safe handling!  
Wear well-fitting protective goggles and protective gloves when working with mortar FIS RC II.  
Important: Observe the instructions for use provided with each cartridge.

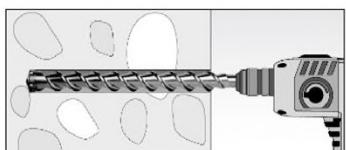

## Installation instruction part 1; Installation with FIS RC II

### Hole drilling

Note: Before drilling, remove carbonized concrete; clean contact areas (see **Annex B 2**)  
In case of aborted drill holes the drill hole shall be filled with mortar.

#### Hammer drilling or compressed air drilling

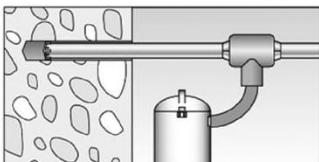

1a

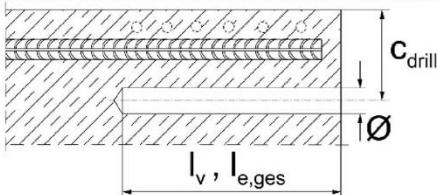

Drill the hole to the required embedment depth using a hammer drill with carbide drill bit set in rotation hammer mode or a pneumatic drill.  
Drill bit sizes see **Table B6.2**.

#### Hammer drilling with hollow drill bit

1b

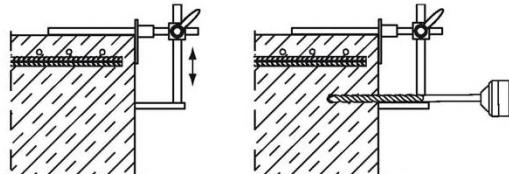

Drill the hole to the required embedment depth using a hammer drill with hollow drill bit in rotation hammer mode.  
Dust extraction conditions see drill hole cleaning  
**Annex B8**.  
Drill bit sizes see **Table B6.2**.

Measure and control concrete cover  $c$   
( $c_{drill} = c + \frac{\emptyset}{2}$ )  
Drill parallel to surface edge and to existing rebar.  
Where applicable use drilling aid.

2

For holes  $l_v > 20$  cm use drilling aid.  
Three different options can be considered:  
A) drilling aid  
B) Slat or spirit level  
C) Visual check

Minimum concrete cover  $c_{min}$  see **Table B5.1**.

## Rebar connection with injection system FIS RC II

### Intended use

Safety regulations; Installation instruction part 1, hole drilling

### Annex B7

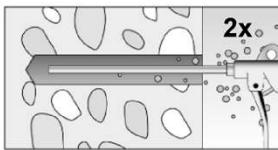

## Installation instruction part 2; Installation with FIS RC II

### Drill hole cleaning

#### Hammer or compressed air drilling

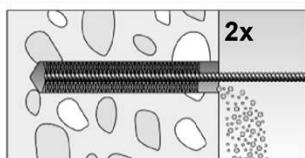

Clean the drill hole:  
For  $d_0 < 18 \text{ mm}$  and depths  $l_v$  resp.  
 $l_{e,ges} \leq 12 \cdot \phi$   
blow out the hole two times by hand.

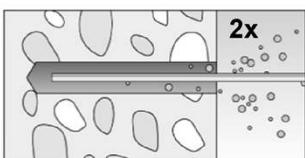

For  $d_0 \geq 18 \text{ mm}$  and depths  $l_v$  resp.  
 $l_{e,ges} > 12 \cdot \phi$  blow out the hole two times with oil-free compressed air ( $p \geq 6 \text{ bar}$ ). Use suitable compressed-air nozzle (see Table B6.2).

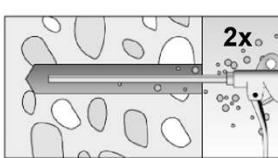

3a

Brush drill hole two times; for drill hole diameters  $d_0 \geq 30 \text{ mm}$  attach brush to a power tool and brush hole with a speed of max. 550 revolutions per minute. For deep holes a brush extension is mandatory. Use suitable brushes (see Table B6.2).

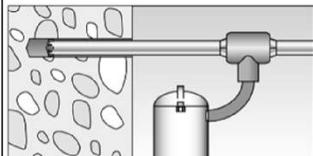

Clean the drill hole:  
For  $d_0 < 18 \text{ mm}$  and depths  $l_v$  resp.  
 $l_{e,ges} \leq 12 \cdot \phi$   
blow out the hole two times by hand.

For  $d_0 \geq 18 \text{ mm}$  and depths  $l_v$  resp.  
 $l_{e,ges} > 12 \cdot \phi$  blow out the hole two times with oil-free compressed air ( $p \geq 6 \text{ bar}$ ) Use suitable compressed-air nozzle (see Table B6.2).

3b

#### Hammer drilling with hollow drill bit

Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.  
Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power.  
No further drill hole cleaning necessary.

### Rebar connection with injection system FIS RC II

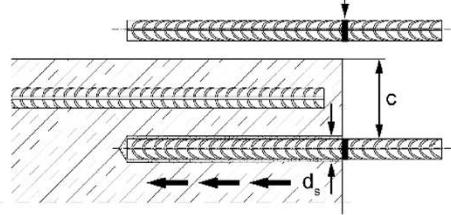

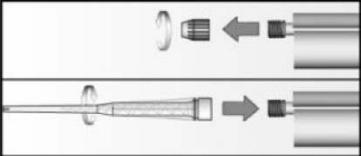

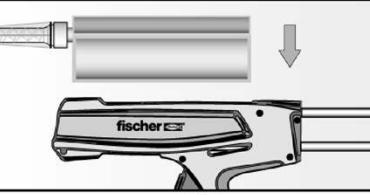

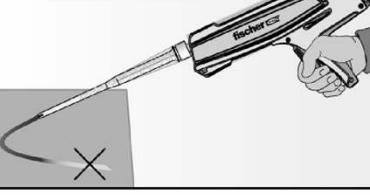

#### Intended use

Installation instruction part 2, drill hole cleaning

#### Annex B8

## Installation instruction part 3; Installation with FIS RC II

### reinforcing bars (rebar) / fischer rebar anchor FRA and cartridge preparation

4		Before use, ensure that the rebar or the fischer rebar anchor FRA is dry and free of oil or other residue. Mark the embedment depth $l_v$ (e.g. with tape) Insert rebar in borehole, to verify drill hole depth and setting depth $l_v$ resp. $l_{e,ges}$ .
5		Twist off the sealing cap Twist on the static mixer (the spiral in the static mixer must be clearly visible).
6		Place the cartridge into a suitable dispenser.
7		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed.

### Rebar connection with injection system FIS RC II

#### Intended use

Installation instruction part 3,  
reinforcing bars (rebar) / fischer rebar anchor FRA and cartridge preparation

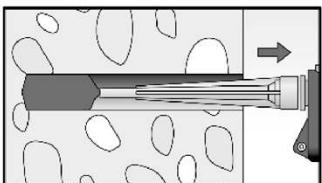

#### Annex B9

Appendix 16 / 24

## Installation instruction part 4; Installation with FIS RC II

### Injection of the mortar without extension tube

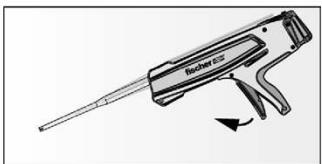

8a

Inject the mortar from the back of the hole towards the front and slowly withdraw the static mixer step by step with each trigger pull.  
Avoid bubbles.

Fill holes approximately 2/3 full, to ensure that the annular gap between the rebar and the concrete will be completely filled with adhesive over the entire embedment length.

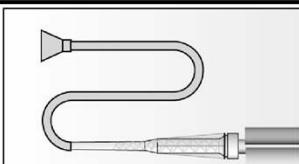

The conditions for mortar injection without extension tube can be found in **Table B5.3**.

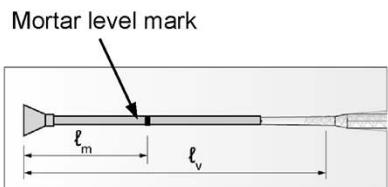

After injecting, release the dispenser. This will prevent further mortar discharge from the static mixer.

### Injection of the mortar with extension tube

8b

Assemble mixing nozzle FIS MR Plus or FIS JMR, extension tube and appropriate injection adapter (see **Table B6.2**).

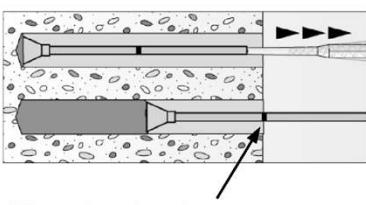

Mark the required mortar level  $l_m$  and embedment depth  $l_v$  resp.  $l_{e,ges}$  with tape or marker on the injection extension tube.

a) Estimation:

$$l_m = \frac{1}{3} \cdot l_v \text{ resp. } l_m = \frac{1}{3} \cdot l_{e,ges} [\text{mm}]$$

b) Precise equation for optimum mortar volume:

$$l_m = l_v \text{ resp. } l_{e,ges} \left( (1,2 \cdot \frac{d_s^2}{d_0^2} - 0,2) \right) [\text{mm}]$$

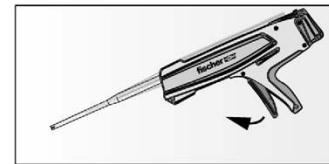

Insert injection adapter to back of the hole. Begin injection allowing the pressure of the injected adhesive mortar to push the injection adapter towards the front of the hole. Do not actively pull out!

Fill holes approximately 2/3 full, to ensure that the annular gap between the rebar and the concrete will be completely filled with adhesive over the embedment length.

When using an injection adapter continue injection until the mortar level mark  $l_m$  becomes visible.

Maximum embedment depth see **Table B5.2**.

After injecting, release the dispenser. This will prevent further mortar discharge from static mixer.

#### Intended use

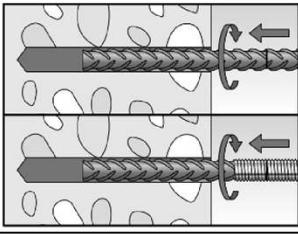

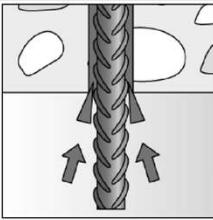

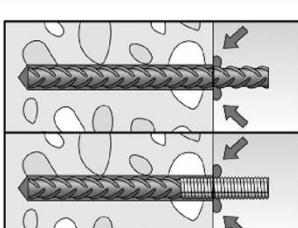

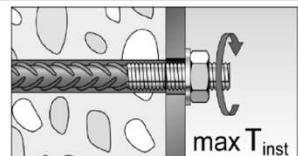

Installation instruction part 4, mortar injection

#### Annex B10

Appendix 17 / 24

## Installation instruction part 5; Installation with FIS RC II

### Insert rebar / fischer rebar anchor FRA

9		<p>Insert the rebar / fischer rebar anchor FRA slowly twisted into the borehole until the embedment mark is reached. Recommendation: Rotation back and forth of the reinforcement bar or the fischer rebar anchor FRA makes pushing easy.</p>
10		<p>For overhead installation, support the rebar / fischer rebar anchor FRA and secure it from falling till mortar started to harden, e.g. using wedges.</p>
11		<p>After installing the rebar or fischer rebar anchor FRA the annular gap must be completely filled with mortar.</p> <p>Proper installation</p> <ul style="list-style-type: none"><li>Desired embedment depth is reached <math>l_v</math>, resp. <math>l_{e,ges}</math>: embedment mark at concrete surface</li><li>Excess mortar flows out of the borehole after the rebar has been fully inserted up to the embedment mark.</li></ul>
12		<p>Observe the working time "<math>t_{work}</math>" (see Table B6.1), which varies according to temperature of base material. Minor adjustments to the rebar / fischer rebar anchor FRA position may be performed during the working time "<math>t_{work}</math>".</p> <p>Full load may be applied only after the curing time "<math>t_{cure}</math>" has elapsed (see Table B 6.1).</p>
13	 $\text{max } T_{inst}$	<p>Mounting the fixture for fischer rebar anchor FRA, max <math>T_{inst}</math> see Table A6.1.</p>

## Design value of the ultimate bond strength $f_{bd,fi}$ resp. $f_{bd,fi,100y}$ at increased temperature for concrete strength classes C12/15 to C50/60 (all drilling methods)

The design value of the bond strength  $f_{bd,fi}$  resp.  $f_{bd,fi,100y}$  at increased temperature has to be calculated by the following equation:

$$f_{bd,fi,(100y)} = k_{fi,(100y)}(\theta) \cdot f_{bd,PIR,(100y)} \cdot \frac{\gamma_c}{\gamma_{m,fi}}$$

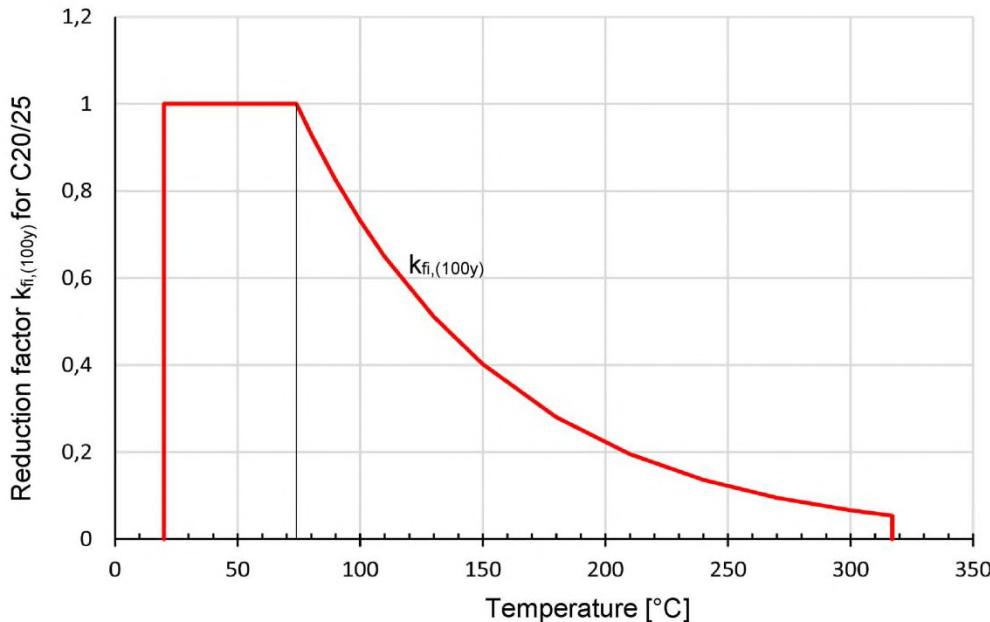

If:  $\theta > 74^\circ\text{C}$   $k_{fi,(100y)}(\theta) = \frac{24,308 \cdot e^{-0,012 \cdot \theta}}{f_{bd,PIR,(100y)} \cdot 4,3} \leq 1,0$

If:  $\theta > \theta_{\max} (317^\circ\text{C})$   $k_{fi}(\theta) = 0$

- $f_{bd,fi}$  = Design value of the ultimate bond strength at increased temperature in N/mm<sup>2</sup> for working life 50 years
- $f_{bd,fi,100y}$  = Design value of the ultimate bond strength at increased temperature in N/mm<sup>2</sup> for working life 100 years
- $\theta$  = Temperature in °C in the mortar layer
- $k_{fi}(\theta)$  = Reduction factor at increased temperature for working life 50 years
- $k_{fi,100y}(\theta)$  = Reduction factor at increased temperature for working life 100 years
- $f_{bd,PIR}$  = Design value of the bond strength in N/mm<sup>2</sup> in cold condition according to **Table C1.3** considering the concrete strength classes, the rebar diameter, the drilling method and the bond conditions according to EN 1992-1-1:2011
- $f_{bd,PIR,100y}$  = Design value of the bond strength in N/mm<sup>2</sup> in cold condition according to **Table C2.3** considering the concrete strength classes, the rebar diameter, the drilling method and the bond conditions according to EN 1992-1-1:2011
- $\gamma_c$  = 1,5 recommended partial factor according to EN 1992-1-1:2011
- $\gamma_{m,fi}$  = 1,0 recommended partial factor according to EN 1992-1-2:2011

For evidence at increased temperature the anchorage length shall be calculated according to EN 1992-1-1:2011 Equation 8.3 using the temperature-dependent ultimate design value of bond strength  $f_{bd,fi}$  resp.  $f_{bd,fi,100y}$ .

**Figure C6.1:** Example graph of reduction factor  $k_{fi,(100y)}(\theta)$  for concrete class C20/25 for good bond conditions

Rebar connection with injection system FIS RC II

**Performance**

Design value of bond strength  $f_{bd,fi}$  resp.  $f_{bd,fi,100y}$  at increased temperature

**Annex C6**
