

DÉCLARATION DES PERFORMANCES

No 0035 – FR

1. Code d'identification unique du produit type: **Acrage Zykon FZA, FZA-I, FZA-D**

2. Usage(s) prévu(s):

Produit	Usage(s) prévu(s)
Cheville métallique pour utilisation dans le béton (charges lourdes)	Pour fixer et/ou soutenir des éléments structuraux en béton ou des éléments lourds tels que bardages et plafonds suspendus, voir annexe, en particulier annexes B 1 - B 4

3. Fabricant: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Straße 1, 72178 Waldachtal, Allemagne**

4. Mandataire: --

5. Système(s) d'évaluation et de vérification de la constance des performances: **1**

6a. Norme harmonisée: ---

Organisme(s) notifié(s): ---

6b. Document d'évaluation européen: **ETAG 001; 2013-04**

Évaluation technique européenne: **ETA-98/0004; 2015-12-22**

Organisme d'évaluation technique: **DIBt**

Organisme(s) notifié(s): **1343 – MPA Darmstadt**

7. Performance(s) déclarée(s):

Résistance mécanique et stabilité (BWR 1)

Caractéristique essentielle	Performance
Résistance caractéristique pour des charges statiques et quasi-statiques de traction	Voir annexe, en particulier annexes C 1 - C 5
Résistance caractéristique pour des charges statiques et quasi-statiques de cisaillement	Voir annexe, en particulier annexes C 6 - C 10
Résistance caractéristique pour la catégorie de performance sismique C1	Voir annexe, en particulier annexes C 11 - C 12
Déplacements	Voir annexe, en particulier annexes C 13 - C 15

Protection contre le feu (BWR 2)

Caractéristique essentielle	Performance
Réaction au feu	La cheville remplit les exigences de la classe A 1
Résistance au feu	NPD

8. Documentation technique appropriée et/ou documentation technique spécifique: ---

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Specific Part

1 Technical description of the product

The fischer-Zykon-Anchor FZA, FZA-D and FZA-I is an anchor made of galvanised or stainless or high corrosion resistant steel which is placed in an undercut hole and anchored by mechanical interlock with displacement-controlled installation.

The bolt projection anchor FZA and the through bolt anchor FZA-D consists of a conical bolt with external thread, an expansion sleeve and a hexagon nut with washer.

The internal threaded anchor FZA-I consists of a conical bolt with internal thread and an expansion sleeve. The anchor is anchored by impact acting on the expansion sleeve over the cone bolts in the undercuts of the borehole.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for static and quasi static action to tension	See Annex C1 – C5
Characteristic resistance for static and quasi static action to shear load	See Annex C6 – C10
Characteristic resistance for seismic performance category C1	See Annex C11 – C12
Displacements	See Annex C13 - C15

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	No performance determined

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: (1996/582/EC, OJ)

The system to be applied is: 1

⁴⁾ Related screws or threaded rods: property class ≥ 70 according to EN ISO 3506-1; ductility $A_5 > 8\%$; High corrosion resistant steel 1.4529, 1.4565 according EN 10088.

fischer-Zykon-Anchor FZA, FZA-D , FZA-I

Product description
Materials

Annex A7

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads
- Seismic Performance Category C1 sizes FZA14x40, FZA14x60, FZA18x80, FZA22x100, FZA 22x125 and FZA14x80D/20, FZA14x100D/40, FZA18x100D/20, FZA18x130D/50, FZA22x125D/25

Base materials:

- Reinforced and unreinforced normal weight concrete according to EN 206-1:2013
- Strength classes C20/25 to C50/60 according to EN 206-1:2013
- Cracked and non-cracked concrete

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
(Zinc plated steel, hot-dip galvanized steel, stainless steel, high corrosion-resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist.
(stainless steel, high corrosion-resistant steel)
- Structures subject to external atmospheric exposure and permanently damp internal condition, if other particular aggressive conditions exist
(high corrosion-resistant steel)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are to be designed in accordance with (please choose the relevant design method):
 - ETAG 001, Annex C, design method A, Edition August 2010 or
 - CEN/TS 1992-4:2009, design method A
- Anchorages under seismic actions (cracked concrete) are to be designed in accordance with:
 - EOTA Technical Report TR 045, Edition February 2013
 - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure.
 - Fastenings in stand-off installation or with a grout layer under seismic action are not allowed.

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Anchor installation such that the effective anchorage depth is complied with. This requirement is ensured when the expansion sleeve in the case of bolt anchor and anchor with internal thread is placed about 1mm under the concrete surface and in case of the through bolt anchor is placed about 1mm under the surface of the fixture.

Annex B3

Installation instructions for FZA, FZA-D, FZA-I

Pre-positioned anchorage

Push-through installation

1 Create a drill hole at right angles to the surface of the anchor base with a hammer drill, using the corresponding Zykron universal drill bit FZUB. The required drill depth is reached once the FZUB depth stop meets the concrete.

2 Once the FZUB depth stop meets the concrete, create the drill hole undercut by making circular swiveling movements with the hammer drill while the hammer mechanism is engaged. Press the hammer drill firmly against the anchor base: 1-2 swiveling movements are sufficient for $\varnothing 14$ mm, with 3-5 movements for $\varnothing 18$ mm and $\varnothing 22$ mm.

3 Clean drill hole.

4 Insert the anchor into the drill hole and then drive the expansion sleeve in with hammer-set device FZE Plus, using a manual hammer. The setting depth marking (knurl) is approx. 1mm behind the surface of the concrete or the non-load-bearing layer (see Fig. 5).

5 The anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible or the gap u is fulfilled.

6 Mount installation object (e.g. anchor plate), washer and nut, screw (for FZA-I) or threaded rod with washer and nut (for FZA-I) and apply installation torque with torque spanner.

1 Create a drill hole through the installation object at right angles to the surface of the anchor base with a hammer drill, using the corresponding Zykron universal drill bit FZUB. The required drill depth is reached once the FZUB depth stop meets the fixture.

2 Once the FZUB depth stop meets the fixture, create the drill hole undercut by making circular swiveling movements with the hammer drill while the hammer mechanism is engaged. Press the hammer drill firmly against the anchor base: 1-2 swiveling movements are sufficient for $\varnothing 14$ mm, with 3-5 movements for $\varnothing 18$ mm and $\varnothing 22$ mm.

3 Clean drill hole.

4 Insert the anchor into the drill hole and then drive the expansion sleeve in with hammer-set device FZE Plus, using a manual hammer. The setting depth marking (knurl) is approx. 1mm behind the surface of the concrete or the non-load-bearing layer (see Fig. 5).

5 The anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible.

6 Mount installation object (e.g. anchor plate), washer and nut and apply installation torque with torque spanner.

Table C1: Characteristic values of **tension** resistance under static and quasi-static action for **bolt projecting anchor FZA** (Design method A, according to **ETAG 001, Annex C** or **CEN/TS 1992-4**)

Type of anchor / size			FZA (bolt projecting anchor)			
			10x40 M6 / t _{fix}	12x40 M8 / t _{fix}	14x40 M10 / t _{fix}	12x50 M8 / t _{fix}
Steel failure for FZA						
Characteristic resistance	N _{Rk,s}	[kN]	16,1	29,3	46,4	29,3
Partial safety factor	γ _{Ms} ¹⁾		1,5			
Steel failure for FZA A4						
Characteristic resistance	N _{Rk,s}	[kN]	14,1	25,6	40,6	25,6
Partial safety factor	γ _{Ms} ¹⁾		1,87			
Steel failure for FZA C						
Characteristic resistance	N _{Rk,s}	[kN]	14,1	25,6	40,6	25,6
Partial safety factor	γ _{Ms} ¹⁾		1,5			
Pullout failure for FZA, FZA A4, FZA C						
Characteristic resistance in cracked concrete C20/25	N _{Rk,p}	[kN]	6	6	6	9
Characteristic resistance in non - cracked concrete C20/25	N _{Rk,p}	[kN]	9	9	9	12
Increasing factors for N _{Rk,p} for cracked and non – cracked concrete	ψ _c	C25/30	1,10			
		C30/37	1,22			
		C35/45	1,34			
		C40/50	1,41			
		C45/55	1,48			
		C50/60	1,55			
Installation safety factor	γ ₂ = γ _{inst}		1,2			1,0
Concrete cone failure and splitting failure for FZA, FZA A4, FZA C						
Effective anchorage depth	h _{ef}	[mm]	40	40	40	50
Factor for non-cracked concrete	k _{ucr}	[-]	10,1			
Factor for cracked concrete	k _{cr}	[-]	7,2			
Min. thickness of concrete member	h _{min}	[mm]	100	100	100	110
Characteristic spacing	s _{cr,N} = s _{cr,sp}	[mm]	3 h _{ef}			
Characteristic edge distance	c _{cr,N} = c _{cr,sp}	[mm]	1,5 h _{ef}			

¹⁾ In absence of other national regulations

fischer-Zykon-Anchor FZA, FZA-D , FZA-I

Performances:

Characteristic values of resistance under **tension** loads for **bolt projecting anchor FZA** (Design according to **ETAG 001, Annex C** or **CEN/TS 1992-4: 2009, Annex D**)

Annex C1

Table C2: Characteristic values of **tension** resistance under static and quasi-static action for **bolt projecting anchor FZA** (Design method A, according to **ETAG 001, Annex C** or **CEN/TS 1992-4**)

Type of anchor / size			FZA (bolt projecting anchor)			
			14x60 M10 / t _{fix}	18x80 M12 / t _{fix}	22x100 M16 / t _{fix}	22x125 M16 / t _{fix}
Steel failure for FZA						
Characteristic resistance	N _{RK,s}	[kN]	46,4	67,4	126	126
Partial safety factor	γ _{Ms} ¹⁾		1,5			
Steel failure for FZA A4						
Characteristic resistance	N _{RK,s}	[kN]	40,6	59,0	110	110
Partial safety factor	γ _{Ms} ¹⁾		1,87			
Steel failure for FZA C						
Characteristic resistance	N _{RK,s}	[kN]	40,6	59,0	110	110
Partial safety factor	γ _{Ms} ¹⁾		1,5			
Pullout failure for FZA, FZA A4, FZA C						
Characteristic resistance in cracked concrete C20/25	N _{RK,p}	[kN]	12	20	40	40
Characteristic resistance in non - cracked concrete C20/25	N _{RK,p}	[kN]	20	30	40	40
Increasing factors for N _{RK,p} for cracked and non – cracked concrete	ψ _c	C25/30	1,10
