

## IZJAVA O SVOJSTVIMA

### DoP 0349

za fischer injekcijski sustav Superbond (visokoučinkovit mort za uporabu u betonu)

HR

1. Jedinstveni identifikator tipa proizvoda: DoP 0349
2. Namjena korištenja: Naknadno učvršćivanje u napuknutom i ne-napuknutom betonu, vidi dodatak, posebno priloge B1 - B17.
3. Proizvođač: fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Njemačka
4. Ovlašteni zastupnik: –
5. Sistem/i od AVCP: 1
6. Europski dokument za ocjenjivanje: EAD 330499-01-0601, Edition 04/2020  
Europska tehnička ocjena: ETA-12/0258; 2023-10-24  
Tijelo za tehničko ocjenjivanje: DIBt- Deutsches Institut für Bautechnik  
Prijavljeno tijelo/prijavljena tijela: 2873 TU Darmstadt
7. Objavljena svojstva:  
**Mehanička otpornost i stabilnost (BWR 1)**  
**Karakteristični otpor na opterećenje (statičko i kvazi-statičko opterećenje):**  
Otpornost na lom čelika: Priloge C1 - C3  
Otpornost na kombinaciju čupanja i otkazivanja betona: Priloge C4-C10  
Otpornost na lom betona: Prilog C4  
Udaljenost ruba kako bi se spriječilo cijepanje pod opterećenjem: Prilog C4  
Robusnost: Priloge C4-C10  
Maksimalni zakretni moment: Priloge B4-B6,B8  
Minimalna udaljenost od ruba i razmak: Priloge B4 - B8  
**Karakteristični otpor na smicanje (statičko i kvazi-statičko opterećenje):**  
Otpornost na lom čelika: Priloge C2, C3  
Otpornost na otkazivanje: Prilog C4  
Otpornost na lom ruba betona: Prilog C4  
**Pomaci pod kratkoročnim i dugoročnim opterećenjem:**  
Pomaci pod kratkoročnim i dugoročnim opterećenjem: Priloge C11, C12  
**Karakteristični otpor i pomaci za kategorije seizmičke učinkovitosti C1 i C2:**  
Otpornost na vlačno opterećenje (napetost), pomaci, kategorija C1: Priloge C13 - C15  
Otpornost na vlačno opterećenje (napetost), pomaci, kategorija C2: Priloge C13, C16  
Otpornost na posmično opterećenje, pomaci, kategorije C1: Priloge C13, C14  
Otpornost na posmično opterećenje, pomaci, kategorije C2: Priloge C13, C16  
Faktor prstenaste pukotine: Prilog C13  
**Higijena, zdravlje i okoliš (BWR 3)**  
Sadržaj, emisija i / ili oslobađanje opasnih tvari: NPD
8. Odgovarajuća tehnička dokumentacija i/ili specifična tehnička dokumentacija: –

Svojstva gore navedenog proizvoda su u skladu sa skupom izjava o svojstvima. Ova izjava o svojstvima se izdaje, u skladu sa Europskom regulativom (EU) Br. 305/2011, pod punom odgovornošću gore navedenog proizvođača.

Za proizvođača i u njegovo ime potpisao:

Dr.-Ing. Oliver Geibig, Generalni direktor poslovne jedinice i inženjering  
Tumlingen, 2023-11-17

Jürgen Grün, Glavni direktor za kemiju i kvalitetu

Ovaj DoP je pripremljen u različitim jezicima. U slučaju da postoji spor u tumačenju, engleska verzija će uvijek prevladati.

U aneksu se nalaze dodatni podaci na engleskom jeziku, koji ne podliježu zakonskoj regulativi.

Translation guidance Essential Characteristics and Performance Parameters for Annexes

**Smjernice za prijevod. Bitne karakteristike i parametri izvedbe za dodatke**

|                                                                                           |                                                                                                                              |                                                                                                                                   |

## Specific Part

### 1 Technical description of the product

The injection system fischer Superbond is a bonded anchor for use in concrete consisting of a cartridge with injection mortar fischer FIS SB or a resin capsule fischer RSB and a steel element according to Annex A 5.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The resin capsule is placed into a drilled hole and the steel element is driven by rotary hammer drill or tangential impact screw driver or cordless drill screw driver. The anchor rod is anchored via the bond between steel element, chemical mortar and concrete.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic                                                                 | Performance                       |
|------------------------------------------------------------------------------------------|-----------------------------------|
| Characteristic resistance to tension load (static and quasi-static loading)              | See Annex B 4 to B 8, C 1 to C 10 |
| Characteristic resistance to shear load (static and quasi-static loading)                | See Annex C 1 to C 4              |
| Displacements under short-term and long-term loading                                     | See Annex C 11 and C 12           |
| Characteristic resistance and displacements for seismic performance categories C1 and C2 | See Annex C 13 to C 16            |

#### 3.2 Hygiene, health and the environment (BWR 3)

| Essential characteristic                                 | Performance             |
|----------------------------------------------------------|-------------------------|
| Content, emission and/or release of dangerous substances | No performance assessed |

**4      Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Installation conditions part 1

anchor rod or fischer anchor rod RG M with fischer injection system FIS SB

Pre-positioned installation

Push through installation (annular gap filled with mortar)

Pre-positioned or push through installation with subsequently injected fischer filling disk  
(annular gap filled with mortar)

fischer Superbond

**Intended use**  
Specifications part 2, fischer resin capsule system RSB

**Annex B 2**

Appendix 11 / 42

## Specifications of intended use part 3

### Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN1993-1-4:2006+A1:2015 corresponding to corrosion resistance classes to Annex A 7 Table A7.1.

### Design:

- Fastenings have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Fastenings are designed in accordance with:  
EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

### Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: The hole shall be filled with mortar.
- Fastening depth should be marked and adhered to on installation.
- Overhead installation is allowed (necessary equipment see installation instruction).

**Installation conditions:**

**Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:**

- Materials, dimensions and mechanical properties according to **Annex A 7, Table A7.1**.
- Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored.
- Setting depth is marked.

<sup>1)</sup> Both drill hole diameters can be used

### Reinforcing bar

- The minimum value of related rib area  $f_{R,min}$  must fulfil the requirements of EN 1992-1-1:2004+AC:2010
- The rib height must be within the range:  $0,05 \cdot \phi \leq h_{rib} \leq 0,07 \cdot \phi$   
( $\phi$  = Nominal diameter of the bar,  $h_{rib}$  = rib height)

## Installation instructions part 5; resin capsule RSB

### Drilling and cleaning the hole (hammer drilling with hollow drill bit)

|   |                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 |  | Check a suitable hollow drill (see <b>Table B2.1</b> ) for correct operation of the dust extraction.                                                                                                                                                                                                                                                                                                                      |
| 2 |  | Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.<br>Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter $d_0$ and drill hole depth $h_0$ see <b>Tables B5.1</b> and <b>B6.1</b> . |

Go to step 6 (Annex B 16)

### Installation fischer anchor rod RG M or fischer internal threaded anchor RG M I

|   |                                                                                   |                                                                                                                         |
|---|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| 6 |  | Insert the resin capsule into the drill hole by hand.<br>Suitable resin capsule RSB or RSB mini see <b>Table B9.2</b> . |
|---|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|

### Installation with rotary hammer

|    |                                                                                     |                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

If not, the metal parts must be pulled out directly and a second resin capsule must be pushed into the drill hole. Setting process must be repeated (Step 7).</p>                                                                                                                                                                                                                                                                                                                                                                                                  |

- 1) In accordance with EN 1992-4:2018 section 7.2.2.3.1  
 $k_6 = 0,6$  for fasteners made of carbon steel with  $f_{uk} \leq 500 \text{ N/mm}^2$   
 $= 0,5$  for fasteners made of carbon steel with  $500 < f_{uk} \leq 1000 \text{ N/mm}^2$   
 $= 0,5$  for fasteners made of stainless steel
- 2)  $f_{uk}$  respectively shall be taken from the specifications of the rebar.

| $\delta_{V0}$ -Factor                                           | [mm/kN]                   | 0,18 | 0,15 | 0,12 | 0,09 | 0,07 | 0,06 | 0,05 | 0,05 |
| $\delta_{V\infty}$ -Factor                                      |                           | 0,27 | 0,22 | 0,18 | 0,14 | 0,11 | 0,09 | 0,08 | 0,07 |

1) Calculation of effective displacement:

$$\delta_{N0} = \delta_{N0\text{-Factor}} \cdot \tau$$

$$\delta_{N\infty} = \delta_{N\infty\text{-Factor}} \cdot \tau$$

$\tau$ : acting bond strength under tension loading

2) Calculation of effective displacement:

$$\delta_{V0} = \delta_{V0\text{-Factor}} \cdot V$$

$$\delta_{V\infty} = \delta_{V\infty\text{-Factor}} \cdot V$$

$V$ : acting shear loading
