

## TELJESÍTMÉNYNYILATKOZAT

### DoP 0238

fischer FIS V Zero injektált rendszerhez (Ragasztott rögzítés betonban történő felhasználásra)

HU

- A termék típus egyedi azonosító kódja: **DoP 0238**
- Felhasználás célja(i): **Repedezett vagy repedésmentes betonba utólag beszerelhető rögzítőelem, ld. a Mellékletet, különösen ezt a mellékletet B1 - B10.**
- Gyártó: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Németország**
- A meghatalmazott képviselő: -
- Az AVCP-rendszer(ek): 1
- Az európai értékelési dokumentum: **EAD 330499-01-0601, Edition 04/2020**  
Európai műszaki értékelés: **ETA-20/0572; 2021-04-28**  
A műszaki értékelést végző szerv: **DIBt- Deutsches Institut für Bautechnik**  
Bejelentett szerv(ek): **2873 TU Darmstadt**
- A nyilatkozatban szereplő teljesítmény(ek):  
**Mechanikus szilárdság és stabilitás (BWR 1)**  
**Karakterisztikus ellenállás húzásra (statikus és kvázi-statisz terhelések):**  
Ellenállás acél szakadás tönkremenetel esetén: Mellékletek C1 - C3 E<sub>s</sub>= 210 000 MPa  
Ellenállás kombinált beton szakadókúp – kihúzóadás tönkremenetel esetén: Mellékletek C4 - C7 τ<sub>Rk,100</sub>= NPD  
Ellenállás beton szakadókúp tönkremenetel esetén: Melléklet C4  
Peremtávolság hasadási tönkremenetel megelőzésére: Melléklet C4  
Ellenállóképesség: Mellékletek C4 - C7  
Maximális rögzítési nyomtér: Mellékletek B3, B4, B6  
Min. perem- és tengelytávolság: Mellékletek B3 - B6  
  
**Karakterisztikus ellenállás nyírásra (statikus és kvázi-statisz terhelések):**  
Ellenállás acél szakadás tönkremenetel esetén: Mellékletek C1 - C3  
Ellenállás pry-out tönkremenetel esetén: Melléklet C4  
Ellenállás beton kitérés tönkremenetel esetén (nyírás): Melléklet C4  
  
**Karakterisztikus ellenállás és elmozdulások a C1 és C2 szeizmikus teljesítménykategóriákhoz:**  
Ellenállás húzó terhelés esetén, elmozdulások, Kategória C1: NPD  
Ellenállás húzó terhelés esetén, elmozdulások, Kategória C2: NPD  
Ellenállás nyíró terhelés esetén, elmozdulások, Kategória C1: NPD  
Ellenállás nyíró terhelés esetén, elmozdulások, Kategória C2: NPD  
Faktor Annuláris rés: NPD  
  
**Elmozdulások rövid és hosszú távú terhelés alatt:**  
Elmozdulások rövid és hosszú távú terhelés alatt: Mellékletek C8, C9  
  
**Higiénia, egészség- és környezetvédelem (BWR 3)**  
Veszélyes anyagok tartalma, kibocsátása és / vagy kibocsátása: NPD
- Megfelelő műszaki dokumentáció és/vagy egyedi műszaki dokumentáció: -

A fent azonosított termék teljesítménye megfelel a bejelentett teljesítmény(ek)nek. A 305/2011/EU rendeletnek megfelelően e teljesítménynyilatkozat kiadásáért kizárólag a fent meghatározott gyártó a felelős

A gyártó nevében és részéről aláíró személy:

Dr. Oliver Geibig, Üzleti egységek és Mérnökségért felelős vezérigazgató  
Tumlingen, 2021-05-12

Jürgen Grün, Vegyi és Minőségért felelős vezérigazgató

Ez a Teljesítmény nyilatkozat különböző nyelveken elkészült. Vitás értelmezés esetén az angol verzió az irányadó.

A melléklet a (nyelvsemleges formában megadott) törvényi előírásokon túl önkéntesen megadott, kiegészítő információkat is tartalmaz angolul.

## Specific Part

### 1 Technical description of the product

The Fischer injection system FIS V Zero is a bonded fastener consisting of an injection cartridge with injection mortar FIS V Zero and a steel element according to Annex A.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1 to C 7, B 3 to B 6
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 to C 4
Displacements under short-term and long-term loading	See Annex C 8 to C 9
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

#### 3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

### 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

**Intended use**  
Specifications (part 1)

**Annex B 1**

Appendix 8 / 26

## Specifications of intended use (part 2)

### Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc plated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN 1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 6 table A6.1.

### Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed in accordance with: EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

### Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to installation
- Overhead installation is allowed (necessary equipment see installation instruction)

Alternatively: Colour coding according to DIN 976-1: 2016

<sup>1)</sup> PC = property class

**Installation conditions:**

**Commercial standard threaded rods, washers and hexagon nuts may also be used, if the following requirements are fulfilled:**

- Materials, dimensions and mechanical properties according to Annex A 6, Table A6.1
- Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored
- Setting depth is marked

Appendix 14 / 26

# Installation instructions part 1

## Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		<p>Drill the hole. Nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> see <b>tables B3.1, B4.1, B5.1, B6.1</b></p>	
2		<p>Clean the drill hole: For <math>h_{ef} \leq 12d</math> and <math>d_0 &lt; 18</math> mm blow out the hole twice by hand</p>	 <p>For <math>h_{ef} &gt; 12d</math> and / or <math>d_0 \geq 18</math> mm blow out the hole twice with oil-free compressed air (<math>p \geq 6</math> bar)</p>
3		<p>Brush the drill hole twice. For drill hole diameter <math>d_0 \geq 18</math> mm and / or <math>h_{ef} &gt; 12d</math> use a power drill. For deep holes use an extension. Corresponding brushes see <b>table B7.1</b></p>	
4		<p>Clean the drill hole: For <math>h_{ef} \leq 12d</math> and <math>d_0 &lt; 18</math> mm blow out the hole twice by hand</p>	 <p>For <math>h_{ef} &gt; 12d</math> and / or <math>d_0 \geq 18</math> mm blow out the hole twice with oil-free compressed air (<math>p \geq 6</math> bar)</p>

Go to step 5

## Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		<p>Check a suitable hollow drill (see <b>table B1.1</b>) for correct operation of the dust extraction</p>	
2		<p>Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data</p> <p>Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> see <b>tables B3.1, B4.1, B5.1, B6.1</b></p>	

Go to step 5

fischer injection system FIS V Zero

**Intended use**  
Installation instructions part 1

**Annex B 8**

Appendix 15 / 26

## Installation instructions part 2

### Preparing the cartridge

5		<p>Remove the sealing cap</p> <p>Screw on the static mixer (the spiral in the static mixer must be clearly visible)</p>
6		 <p>Place the cartridge into the dispenser</p>
7		 <p>Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey</p>

Go to step 8

### Injection of the mortar

8	 <p>Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles</p>	 <p>The conditions for mortar injection without extension tube can be found in <b>table B7.2</b></p> <p>For deeper drill holes, than those mentioned in <b>table B7.2</b>, use a suitable extension tube</p>	 <p>For overhead installation, deep holes (<math>h_0 &gt; 250</math> mm) or drill hole diameter (<math>d_0 = 30</math> mm) use an injection adapter</p>
---	---	--	---

Go to step 9

fischer injection system FIS V Zero

**Intended use**  
Installation instructions part 2

**Annex B 9**

Appendix 16 / 26

### Installation instructions part 3

#### Installation of anchor rods or fischer internal threaded anchors RG M I

9		<p>Only use clean and oil-free metal parts. Mark the setting depth of the metal part. Push the anchor rod or fischer internal threaded RG M I anchor down to the bottom of the hole, turning it slightly while doing so. After inserting the metal parts, excess mortar must be emerged around the anchor element.</p>
	 <p>For overhead installations support the metal part with wedges (e.g. fischer centering wedges) or fischer overhead clips.</p>	 <p>For push through installation fill the annular gap with mortar</p>
10	 <p>Wait for the specified curing time <math>t_{cure}</math> see <b>table B7.3</b></p>	 <p>Mounting the fixture max <math>T_{inst}</math> see <b>tables B3.1 and B4.1</b></p>
Option		<p>After the minimum curing time is reached, the gap between metal part and fixture (annular clearance) may be filled with mortar via the fischer filling disc. Compressive strength <math>\geq 50 \text{ N/mm}^2</math> (e.g. fischer injection mortars FIS V Zero, FIS HB, FIS SB, FIS V, FIS V Plus, FIS EM Plus). <b>ATTENTION:</b> Using fischer filling disc reduces <math>t_{fix}</math> (usable length of the anchor)</p>

#### Installation reinforcing bars and fischer rebar anchor FRA

9		<p>Only use clean and oil-free reinforcing bars or fischer rebar anchor FRA. Mark the setting depth. Push the reinforcement bar or the fischer rebar anchor FRA into the filled hole up to the setting depth mark. Recommendation: Rotation back and forth of the reinforcement bar or the fischer rebar anchor FRA makes pushing easy</p>
	 <p>When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole.</p>	
10	 <p>Wait for the specified curing time <math>t_{cure}</math> see <b>table B7.3</b></p>	 <p>Mounting the fixture max <math>T_{inst}</math> see <b>table B6.1</b></p>

fischer injection system FIS V Zero
