TELJESÍTMÉNYNYILATKOZAT

DoP 0321

fischer Strong Undercut Anchor FSU (Mechanikus rögzítőelem betonba történő felhasználásra) HU

1. A terméktípus egyedi azonosító kódja: **DoP 0321**

2. Felhasználás célja(i): **Repedezett vagy repedésmentes betonba utólag beszerelhető rögzítőelem, ld. a Mellékletet, különösen ezt a mellékletet B1 - B5.**

3. Gyártó: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Németország**

4. A meghatalmazott képviselő: **–**

5. Az AVCP-rendszer(ek): **1**

6. Az európai értékelési dokumentum: **EAD 330232-01-0601-v02, Edition 06/2023**
   Európai műszaki értékelés: **ETA-22/0674; 2023-07-26**
   A műszaki értékelést végző szerv: **DIBt- Deutsches Institut für Bautechnik**
   Bejelentett szerv(ek): **2873 TU Darmstadt**

7. A nyilatkozatban szereplő teljesítmény(ek):

Mechanikus szilárdság és stabilitás (BWR 1)

Karakterisztikus ellenállás húzásra (statikus és kvázi-statikus terhelések) Módszer A:

Ellenállás acél szakadás tönkremenetel esetén: ld. a Mellékletet, különösen ezt a mellékletet C1	E_S= 210 000 MPa
Ellenállás kihúzódás tönkremenetel esetén: ld. a Mellékletet, különösen ezt a mellékletet C1	
Ellenállás beton szakadókúp tönkremenetel esetén: ld. a Mellékletet, különösen ezt a mellékletet C1	
Ellenállóképesség: ld. a Mellékletet, különösen ezt a mellékletet C1	
Min. perem- és tengelytávolság: ld. a Mellékletet, különösen ezt a mellékletet C3	
Peremtávolság hasadási tönkremenetel megelőzésére: ld. a Mellékletet, különösen ezt a mellékletet C1	

Karakterisztikus ellenállás nyírásra (statikus és kvázi-statikus terhelések), Módszer A:

Ellenállás acél szakadás tönkremenetel esetén (nyiárás): ld. a Mellékletet, különösen ezt a mellékletet C2
Ellenállás pry-out tönkremenetel esetén: ld. a Mellékletet, különösen ezt a mellékletet C2

Karakterisztikus ellenállás az egyszerűbb tervezés érdekében:

Módszer B: NPD
Módszer C: NPD

Elmozdulások:

Elmozdulások statikus és kvázi-statikus terhelés esetén: ld. a Mellékletet, különösen ezt a mellékletet C6

Karakterisztikus ellenállás és elmozdulások a C1 és C2 szeizmikus teljesítménykategóriákhoz:

Ellenállás húzó terhelés esetén, elmozdulások, Kategória C1: ld. a Mellékletet, különösen ezt a mellékletet C5
Ellenállás húzó terhelés esetén, elmozdulások, Kategória C2: ld. a Mellékletet, különösen ezeket a mellékleteket C5, C6
Ellenállás nyíró terhelés esetén, elmozdulások, Kategória C1: ld. a Mellékletet, különösen ezt a mellékletet C5
Ellenállás nyíró terhelés esetén, elmozdulások, Kategória C2: ld. a Mellékletet, különösen ezeket a mellékleteket C5, C6
Faktor Annuláris rés: ld. a Mellékletet, különösen ezt a mellékletet C5

Biztonság tűz esetén (BWR 2)

Tűzzel szembeni viselkedés: Osztály (A1)

Tűzállóság:

Tűzállóság acél tönkremenetelnél (húzásra): ld. a Mellékletet, különösen ezt a mellékletet C4
Tűzállóság kihúzódás tönkremenetel eseén (húzásra): ld. a Mellékletet, különösen ezt a mellékletet C4
Tűzállóság acél tönkremenetel esetén (nyírásra): ld. a Mellékletet, különösen ezt a mellékletet C4

Tartósság:

Tartósság: ld. a Mellékletet, különösen ezeket a mellékleteket A2, B1

8. Megfelelő műszaki dokumentáció és/vagy egyedi műszaki dokumentáció: –

A fent azonosított termék teljesítménye megfelel a bejelentett teljesítmény(ek)nek. A 305/2011/EU rendeletnek megfelelően e teljesítménynyilatkozat kiadásáért kizárólag a fent meghatározott gyártó a felelős.

A gyártó nevében és részéről aláíró személy:

Dr.-Ing. Oliver Geibig, Üzleti egységek és Mérnökségért felelős vezérigazgató

Jürgen Grün, Vegyi és Minőségért felelős vezérigazgató

Tumlingen, 2023-09-01

Ez a Teljesítmény nyilatkozat különböző nyelveken elkészült. Vitás értelmezés esetén az angol verzió az irányadó.

A melléklet a (nyelvsemleges formában megadott) törvényi előírásokon túl önkéntesen megadott, kiegészítő információkat is tartalmaz angolul.

Specific Part

1 Technical description of the product

The fischer Strong Undercut Anchor is an anchor made of galvanized steel which is placed in a cylindrical hole and anchored by displacement-controlled, self-undercutted mechanical interlock.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading), Method A	See Annex C 1 and C 3
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 2
Displacements	See Annex C 6
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 5 and C 6

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 4

3.3 Aspects of Durability

Essential characteristic	Performance
Durability	See Annex B 1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330232-01-0601-v02 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Specifications of intended use

Fastenings subject to:

Size		FSU			FSU-P		
		M10x100 /20	**M12x125 /30**	**M12x125 /50**	**M10x100 /20**	**M12x125 /30**	**M12x125 /50**
Static and quasi-static loads		✓					
Cracked and uncracked concrete							
Seismic performance category	C1						
	C2						
Fire exposure							

Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206:2013+A2:2021
- Strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed in accordance with EN 1992-4:2018 and EOTA Technical Report TR 055:2018.
- For requirements to resistance to fire local spalling of the concrete cover must be avoided

Installation parameters

(Fig. not to scale)

Installation instructions

- Fastener installation carried out by appropriately qualified personnel according to the design drawings and under the supervision of the person responsible for technical matters on the site.
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener.
- Fastener installation in accordance with the manufacturer's specifications and drawings and using the appropriate tools (machine setting tool FSU-ST, stop drill bit FSU-SD).
- Drill hole created perpendicular (tolerance +/- 5°) to concrete surface.
- Cleaning the hole of drilling dust.
- Fastener installation ensuring complete expansion of the sleeve with checking that the coloured ring marking on the bolt is visible above the top edge of the anchor sleeve, therefore it is required using the setting tool FSU-ST, that is the appropriate depth ring marking of the setting tool at least flush with the concrete surface (pre-setting) respecting with the fixture surface (Push-through-setting).
- Fastener installation ensuring complete shear load capacity, after setting the gap between the top edge of the sleeve and the concrete surface (pre-setting) or with surface of the fixture (Push-through-setting) has to be in the specified range according to Annex B 2, Table B2.1.
- Positioning of the drill holes and the undercut without damaging the reinforcement.
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance, if the aborted drill hole is filled with high strength mortar and, if under shear or oblique tension load, it is not in the direction of load application.
- Application of the torque moment given in Annex B 2, Table B2.1 using a calibrated torque wrench.

Installation instructions for pre-setting anchor FSU

1) 
2) 
1) Drill the hole with the designated stop drill bit FSU-SD (see Table A3.1).
2) Clean the hole.

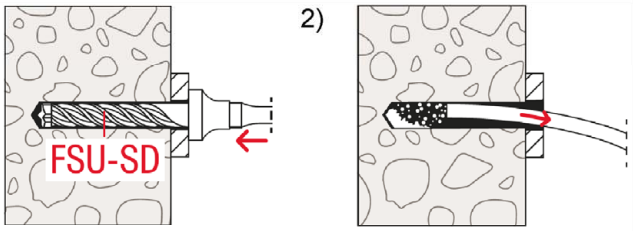
3) 
4) 
3) Place the anchor in the hole by hand. Do not use any hammering tools.
4) Use the designated setting tool FSU-ST (see Table A3.2) and follow the recommendations for the hammer drill (see Table A3.3).

5) 
6) 
5) Place the setting tool in the grooves provided on the anchor. Carry out the setting process with the rotary-impact mode of the hammer drill. The setting process is completed when the marking ring of the setting tool is flush with the concrete surface.
6) After removing the setting tool, the red coloured ring marking on the bolt must be visible above the top edge of the anchor sleeve. The gap U between the top edge of the sleeve and the concrete surface must be in the specified range according to Table B2.1.

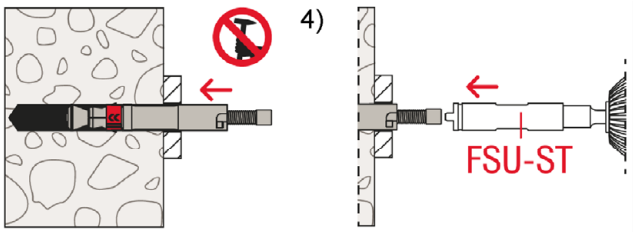
7) 
8) 
7) Place the fixture.
8) Remove the protective cap. Place the spring washer and the hexagon nut on the bolt. Take care of the right orientation of the spring washer, in the way, that the outer diameter of the washer in uncompressed condition is in touch with the fixture, only. Apply the installation torque.

9) 
9) Correctly installed fastener.

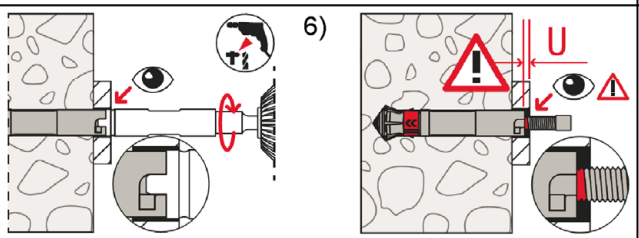
Installation instructions for push-though anchor FSU-P



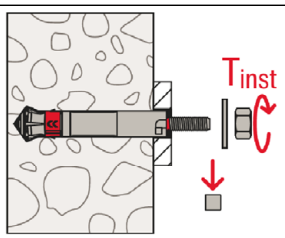
1) Drill the hole with the designated stop drill bit FSU-SD (see table A3.1) in compliance with the specified range of fixture thicknesses (see Table B2.1).
2) Clean the hole.



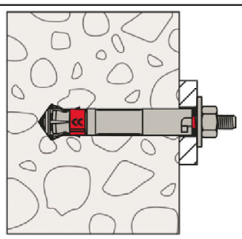
3) Place the anchor in the hole by hand. Do not use any hammering tools.
4) Use the designated setting tool FSU-ST (see Table A3.2) and follow the recommendations for the hammer drill (see Table A3.3).



5) Place the setting tool in the grooves provided on the anchor. Carry out the setting process with the rotary-impact mode of the hammer drill. The setting process is completed when the marking ring of the setting tool is flush with the fixture surface.
6) After removing the setting tool, the red coloured ring marking on the bolt must be visible above the top edge of the anchor sleeve. The gap U between the top edge of the sleeve and the fixture surface must be in the specified range according to Table B2.1.



7) Remove the protective cap. Place the spring washer and the hexagon nut on the bolt. Take care of the right orientation of the spring washer, in the way, that the outer diameter of the washer in uncompressed condition is in touch with the fixture, only. Apply the installation torque.



8) Correctly installed fastener.

		R90		2,2	4,4
		R120		1,9	4,0

Concrete pryout failure according to EN 1992-4:2018

Table C4.3: **Minimum spacings** and **minimum edge distances** under **fire exposure** for **tension** and **shear** load

Size			FSU, FSU-P All sizes
Spacing	$s_{min,fi}$	[mm]	$4 \cdot h_{ef}$
Edge distance	$c_{min,fi}$		$c_{min,fi} = 2 \cdot h_{ef}$, for fire exposure from more than one side $c_{min,fi} \geq 300$ mm

Table C5.1: Characteristic values of **tension** and **shear resistance** under **seismic performance category C1**

Size				**FSU, FSU-P**			
				M10x100		**M12x125**	
Factor for annular gap	Without filling of annular gap	α_{gap}	[-]	0,5			
Steel failure							
Characteristic resistance tension load C1		$N_{Rk,s,C1}$	[kN]	44,2		65,9	
Pullout failure							
Characteristic resistance tension load in cracked concrete C1		$N_{Rk,p,C1}$	[kN]	30,0		40,0	
Steel failure without lever arm							
Characteristic resistance shear load C1	for t_{fix}		[mm]	$10 \le t_{fix} < 15$	$15 \le t_{fix} \le 20$	$12 \le t_{fix} < 20$	$20 \le t_{fix} \le 50$
	$V_{Rk,s,C1}$ FSU		[kN]	18,8		26,8	
	$V_{Rk,s,C1}$ FSU-P			46,3	48,7	60,5	67,7

Table C5.2: Characteristic values of **tension** and **shear resistance** under **seismic performance category C2**

Size				**FSU, FSU-P**			
				M10x100		**M12x125**	
Factor for annular gap	Without filling of annular gap	α_{gap}	[-]	0,5			
Steel failure							
Characteristic resistance tension load C2		$N_{Rk,s,C2}$	[kN]	44,2		65,9	
Pullout failure							
Characteristic resistance tension load in cracked concrete C2		$N_{Rk,p,C2}$	[kN]	30,0		40,0	
Steel failure without lever arm							
Characteristic resistance shear load C2	for t_{fix}		[mm]	$10 \le t_{fix} < 15$	$15 \le t_{fix} \le 20$	$12 \le t_{fix} < 20$	$20 \le t_{fix} \le 50$
	$V_{Rk,s,C2}$ FSU		[kN]	20,1		24,5	
	$V_{Rk,s,C2}$ FSU-P			39,6	41,8	51,8	62,9

Table C6.1: Displacements under static and quasi-static **tension** loads

Size			FSU, FSU-P M10x100	FSU, FSU-P M12x125
Tension load in cracked concrete C20/25	N	[kN]	22,1	32,1
Displacements	δ_{N0}	[mm]	1,1	1,3
	$\delta_{N\infty}$		2,8	3,0
Tension load in uncracked concrete C20/25	N	[kN]	22,1	32,1
Displacements	δ_{N0}	[mm]	1,1	1,3
	$\delta_{N\infty}$		2,3	2,3

Table C6.2: Displacements under static and quasi-static **shear** loads

Size			FSU, FSU-P M10x100	FSU, FSU-P M12x125
Shear load in cracked and uncracked concrete C20/25	V	[kN]	13,8	21,3
Displacements FSU	δ_{V0}	[mm]	5,4	6,7
	$\delta_{V\infty}$		8,0	10,0
Shear load in cracked and uncracked concrete C20/25	V	[kN]	36,3	52,2
Displacements FSU-P	δ_{V0}	[mm]	5,9	7,2
	$\delta_{V\infty}$		8,8	10,7

Table C6.3: Displacements under **tension** loads for **seismic performance category C2**

Size				FSU, FSU-P M10x100	FSU, FSU-P M12x125
Displacement	DLS	$\delta_{N,C2}$	[mm]	4,6	4,6
	ULS			11,4	10,4

Table C6.4: Displacements under **shear** loads for **seismic performance category C2**

Size				FSU, FSU-P M10x100	FSU, FSU-P M12x125
Displacement FSU	DLS	$\delta_{V,C2}$	[mm]	5,2	5,0
	ULS			7,3	6,7
Displacement FSU-P	DLS	$\delta_{V,C2}$	[mm]	4,8	5,0
	ULS			10,7	18,5
