

## DICHIARAZIONE DI PRESTAZIONE

**DoP: 0129**

per Ancorante a iniezione fischer Highbond FHB II (Ancorante chimico per utilizzo in calcestruzzo) – IT

1. Codice di identificazione unico del prodotto-tipo: **DoP: 0129**
2. Usi previsti: **Fissaggio post-intallato in calcestruzzo fessurato o non fessurato, vedere l'appendice, specialmente gli Annessi B 1 a B 7**
3. Fabbricante: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Germania**
4. Mandatario: --
5. Sistemi di VVCP: **1**
6. Documento per la valutazione europea: **ETAG 001; 2013-04**  
Valutazione tecnica europea: **ETA-16/0637; 2017-12-14**  
Organismo di valutazione tecnica: **DIBt**  
Organismi notificati: **1343 – MPA Darmstadt**

7. Prestazioni dichiarate:

**Resistenza meccanica e stabilità (BWR 1), Sicurezza durante l'uso (BWR 4)**

- **Resistenza caratteristica per azioni di trazione e di taglio: Vedere appendice, specialmente Annessi C 1 a C 4**
- **Spostamenti sotto azioni di trazione e di taglio: Vedere appendice, specialmente Annessi C 5 a C 6**

**Sicurezza in caso di incendio (BWR 2)**

- **Reazione al fuoco: Gli ancoraggi soddisfano i requisiti per la Classe A1**
- **Resistenza al fuoco: NP**

8. Documentazione tecnica appropriata e/o documentazione tecnica specifica: ---

La prestazione del prodotto sopra identificato è conforme all'insieme delle prestazioni dichiarate. La presente dichiarazione di responsabilità viene emessa, in conformità al regolamento (UE) n. 305/2011, sotto la sola responsabilità del fabbricante sopra identificato.

Firmato a nome e per conto del fabbricante da:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2017-12-20

- Questa Dichiarazione di Prestazione (DoP) è stata preparata in diverse lingue. In caso di divergenza d'interpretazione avrà sempre prevalenza la versione inglese.
- L'appendice include informazioni volontarie e complementari in lingua inglese (lingua specificata neutrale) eccetto i requisiti di legge

## Specific Part

### 1 Technical description of the product

The fischer Highbond-Anchor FHB II is a torque controlled bonded anchor consisting of a mortar cartridge with mortar fischer FIS HB and an anchor rod FHB II - A L or FHB II - A S with hexagon nut and washer.

The anchor rod is placed into a drilled hole filled with injection mortar. The load transfer is realised by mechanical interlock of several cones in the bonding mortar and then via a combination of bonding and friction forces in the anchorage ground (concrete).

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic                           | Performance           |
|----------------------------------------------------|-----------------------|
| Characteristic values under tension and shear load | See Annex C 1 to C 4  |
| Displacements under tension and shear loads        | See Annex C 5 and C 6 |

#### 3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance                                 |
|--------------------------|---------------------------------------------|
| Reaction to fire         | Anchorage satisfy requirements for Class A1 |
| Resistance to fire       | No performance assessed                     |

#### 3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

#### 3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

**4      Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with guideline for European technical approval ETAG 001, April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

## Specifications of intended use (part 2)

### Base materials:

- Reinforced or unreinforced normal weight concrete Strength classes C20/25 to C50/60 according to EN 206-1:2000

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions  
(zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist  
(stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure, to permanently damp internal conditions or in other particular aggressive conditions (high corrosion resistant steel)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

### Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with:  
EOTA ETAG 001 Annex C, 08/2010 or CEN/TS 1992-4:2009

### Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Observe the effective anchorage depth
- Overhead installation is allowed

| 4 |   | Blow out the drill hole twice                                                                                          |                                                                                                                                                                                                     |
|   |  | For drill hole diameter $d_0 < 25$ mm with hand-blowout or oil-free compressed air                                     |  For drill hole diameter $d_0 = 25$ mm with oil-free compressed air ( $p \geq 6$ bar)<br>Use a cleaning nozzle. |

Go to step 5

## Drilling and cleaning the hole (hammer drilling with hollow drill bit)

|   |                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                              |  |
|---|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 1 |  | Check a suitable hollow drill (see <b>Table B1.1</b> )<br>for correct operation of the dust extraction                                                                                                                                                                                                                                                                                                       |  |
| 2 |  | Use a suitable dust extraction system, e. g. Bosch GAS 35 M AFC or a comparable dust extraction system with equivalent performance data<br>Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power.<br>Diameter of drill hole $d_0$ and drill hole depth $h_0$ see <b>Tables B3.1, B4.1</b> |  |

Go to step 5

fischer Highbond-Anchor FHB II Inject

### Intended use

Installation instructions part 1; Installation with injection mortar

**Annex B 6**

## Installation instructions part 2; Installation with injection mortar FIS HB

### Preparing the cartridge

|   |                                                                                   |                                                                                                                                                                                                                  |
|---|-----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5 |  | Remove the sealing cap<br>Screw on the static mixer<br>(the spiral in the static mixer must be clearly visible)                                                                                                  |
| 6 |  |  Place the cartridge into the dispenser                                                                                         |
| 7 |  |  Extrude approximately 10 cm of material until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey |

### Injection of the mortar

|   |                                                                                     |                                                                                                                                                                                                                                         |
|---|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8 |    | Fill approximately 2/3 of the drill hole with mortar. Exact quantity of mortar (travel scale on the cartridge) see instruction sheet. Fill the drill hole with mortar, always begin from the bottom of the hole to avoid bubbles        |
|   |   | <b>Push-through installation:</b> By using Highbond-Anchor rods <b>FHB II Inject - AL</b> the drill hole in the fixture must be also filled with mortar. By using Highbond-Anchor rods <b>FHB II Inject - AS</b> is this not necessary. |
|   |  | For drill hole depth $\geq 170$ mm use an extension tube                                                                                                                                                                                |

### Installation Highbond-Anchor rod FHB II Inject– A L and FHB II Inject – A S

|        |                                                                                      |                                                                                                                                                                                                                                                                                                                        |
|--------|--------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9      |   | Only use clean and oil-free anchor rods.<br>Push the anchor rod down to the bottom of the hole, turning it slightly while doing so.                                                                                                                                                                                    |
| 10     |   | After inserting the anchor rod <b>FHB II Inject - AL</b> , surplus mortar must be escaped from the fixture.<br>After inserting the anchor rod <b>FHB II Inject - AS</b> , surplus mortar must be escaped from the bore hole or must be visible in the fixture.                                                         |
|        |   | For overhead installations support the anchor rod with wedges.<br>(e.g. fischer centering wedges)                                                                                                                                                                                                                      |
| 11     |   | Wait for the specified curing time $t_{cure}$ see <b>Table B5.2</b>                                                                                                                                                                                                                                                    |
| 12     |  | Mounting the fixture<br>$T_{inst}$ see <b>Tables B3.1, B4.1</b>                                                                                                                                                                                                                                                        |
| Option |   | After the minimum curing time is reached, the gap between anchor and fixture (annular clearance) may be filled with mortar via the fischer filling disc FFD. compressive strength $\geq 50$ N/mm <sup>2</sup> (e.g. FIS HB). ATTENTION: Using fischer filling disc FFD reduces $t_{fix}$ (usable length of the anchor) |

fischer Highbond-Anchor FHB II Inject

#### Intended use

Installation instructions part 2; Installation with injection mortar

Annex B 7
