

DICHIARAZIONE DI PRESTAZIONE

n. 0085 – IT

1. Codice di identificazione unico del prodotto-tipo: **Sistema fischer Highbond FHB**

2. Usi previsti:

Prodotto	Uso/i previsto/i
Ancorante chimico per l'uso in calcestruzzo	Ancoraggi per i quali i requisiti di resistenza meccanica, stabilità e sicurezza durante l'utilizzo devono essere soddisfatti. Essi sono per fissaggi e/o elementi strutturali di supporto (che contribuiscono alla stabilità delle opere) oppure per elementi pesanti, vedere l'appendice, specialmente gli Annessi B 1 a B 4

3. Fabbricante: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Straße 1, 72178 Waldachtal, Germania**

4. Mandatario: --

5. Sistemi di VVCP: **1**

6a. Norma armonizzata: ---

Organismi notificati: ---

6b. Documento per la valutazione europea: **ETAG 001; 2013-04**

Valutazione tecnica europea: **ETA-06/0171; 2016-04-20**

Organismo di valutazione tecnica: **DIBt**

Organismi notificati: **1343 – MPA Darmstadt**

7. Prestazioni dichiarate:

Resistenza meccanica e stabilità (BWR 1)

Caratteristiche essenziali	Prestazione
Resistenza caratteristica	Vedere appendice, specialmente Annessi C 1 a C 3
Spostamenti sotto azioni di trazione e di taglio	Vedere l'appendice, specialmente l'Annesso C 3

Sicurezza in caso di incendio (BWR 2)

Caratteristiche essenziali	Prestazione
Reazione al fuoco	Gli ancoraggi soddisfano i requisiti per la Classe A1
Resistenza al fuoco	NPD

8. Documentazione tecnica appropriata e/o documentazione tecnica specifica: ---

La prestazione del prodotto sopra identificato è conforme all'insieme delle prestazioni dichiarate. La presente dichiarazione di responsabilità viene emessa, in conformità al regolamento (UE) n. 305/2011, sotto la sola responsabilità del fabbricante sopra identificato.

Firmato a nome e per conto del fabbricante da:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2016-04-29

- Questa Dichiarazione di Prestazione (DoP) è stata preparata in diverse lingue. In caso di divergenza d'interpretazione avrà sempre prevalenza la versione inglese.

- L'appendice include informazioni volontarie e complementari in lingua inglese (lingua specificata neutrale) eccetto i requisiti di legge

Specific Part

1 Technical description of the product

The fischer Highbond-anchor FHB is a torque controlled bonded anchor consisting of a mortar cartridge with FIS HB and an anchor rod with hexagon nut and washer. The anchor rod (including nut and washer) is made of galvanised steel.

The load transfer is realised by mechanical interlock of several cones in the bonding mortar and then via a combination of bonding and friction forces in the anchorage ground (concrete).

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance	See Annex C 1 to C 3
Displacements under tension and shear loads	See Annex C 3

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Annex A 2

Specifications of intended use

Table B1: Overview use categories and performance categories

Anchorages subject to		FIS HB with		
		fischer Highbond-anchor FHB		
				
Hammer drilling		all sizes		
Static and quasi static load, in	uncracked concrete	all sizes	Tables:C1; C2; C3; C4	
	cracked concrete			
Use category	dry and wet concrete	all sizes		
	flooded hole	all sizes		
Installation temperature		-5°C to +40°C		
In-service temperature	Temperature range	-40°C to +80°C	(Maximum short term temperature +80°C and maximum long term temperature +50°C)	

Base materials:

- Reinforced or unreinforced normal weight concrete Strength classes C20/25 to C50/60 according to EN 206-1:2000

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions

Design:

- Anchorages have to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static are designed in accordance with:
 - EOTA ETAG 001, Annex C, Design method A 08/2010

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: The hole shall be filled with mortar
- Keeping the effective anchorage depth
- Overhead installation is allowed

Installation parameters for anchor rods FHB - A

Annex B 2

Table B3: Maximum processing times and minimum curing times

Concrete temperature ³⁾ [°C]	Maximum processing times t_{work} ²⁾ [minutes]	Minimum curing times t_{cure} ¹⁾ [minutes]
-5 to 0	--	360
>+1 to +5	--	180
>+6 to +10	15	90
>+11 to +20	6	35
>+21 to +30	4	20
>+31 to +40	2	12

¹⁾ In wet concrete or flooded hole the curing times must be doubled.

²⁾ The temperature of the mortar may not fall below +5°C.

³⁾ During the curing of the mortar the temperature of the concrete may not fall below -5°C.

Installation instructions (Part 1)

Drilling and cleaning the hole

1		Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Table B2 .
2		Blow out the drill hole twice. For anchor size $\geq$ M20 use oil free compressed air ($\geq$ 6bar). For this use a pressure nozzle $\varnothing$ 19 mm.
3		Brush the hole twice using a steel brush. Corresponding steel brushes see Table B2
4		Blow out the drill hole twice. For anchor size $\geq$ M20 use oil free compressed air ($\geq$ 6bar). For this use a pressure nozzle $\varnothing$ 19 mm.

Preparing the cartridge

5		Remove the sealing cap (do not use the sealing cap again)
6		Screw on the static mixer (the spiral in the static mixer must be clearly visible). Never use the mortar cartridge without a static mixer.
7		Place the cartridge into the dispenser
8		Extrude approximately 10 cm of material until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

fischer Highbond-anchor FHB

Intended Use

Working times and curing times
Installation instructions (Part 1)

Annex B 3

Installation instructions (Part 2)**Installation of anchor rods FHB-A**

9		Observe the working time (t_{work}) of the mortar ¹⁾ (see Table B3). Fill approx. 2/3 of the drill hole with mortar FIS HB. Always begin from the bottom of the hole and avoid bubbles (exact quantity of the mortar see installation instruction of the manufacturer).
10		Insert the Highbond- anchor rod FHB-A to the bottom of the mortar- filled bore hole (setting depth), turning it slightly while doing so.
		After inserting the anchor element, excess mortar must emerge around the anchor element
		For overhead installations support the anchor rod with wedges. (e.g. fischer centering wedges)
11		Observe the curing time (t_{cure}) of the mortar (see Table B3). Screw on the fixture and for installation check generate the correct torque moment ($t_{inst,max}$) (see Table B2)

¹⁾ If the working time has elapsed (work stoppage), use a new static mixer and, if necessary, remove crusted material on the mouth of the cartridge.
