

## DICHIARAZIONE DI PRESTAZIONE

### DoP 0396

per fischer FIS EM Plus dynamic (Fissaggio post-installato in calcestruzzo fessurato o non fessurato)

IT

1. Codice di identificazione unico del prodotto-tipo: **DoP 0396**
2. Usi previsti: **Fissaggi post-inseriti per utilizzo in calcestruzzo sotto azioni di fatica ciclica, vedi appendice, in particolare gli allegati da B1 - B9.**
3. Fabbricante: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Germany**
4. Mandatario: **-**
5. Sistemi di VVCP: **1**
  
6. Documento per la valutazione europea: **EAD 330250-01-0601**  
Valutazione tecnica europea: **ETA-23/0842; 2025-12-16**  
Organismo di valutazione tecnica: **DIBt- Deutsches Institut für Bautechnik**  
Organismi notificati: **2873 TU Darmstadt**
  
7. Prestazioni dichiarate:  
**EAD 330250-01-0601; Table 2.1.3**  
**Metodo di valutazione C: funzione linearizzata**  
**Resistenza meccanica e stabilità (BWR 1)**
  - 1 Resistenza caratteristica alla rottura per fatica dell'acciaio sotto azione di trazione: Allegati C1, C3, C4
  - 2 Resistenza caratteristica alla rottura per fatica del cono di calcestruzzo, per sfilamento dell'ancorante, splitting e blow-out del calcestruzzo sotto azione di trazione: Allegati C1, C3, C4
  - 3 Resistenza caratteristica alla rottura per fatica del calcestruzzo combinata con sfilamento sotto azione di trazione: Allegati C1, C3, C4
  - 4 Resistenza caratteristica alla rottura per fatica dell'acciaio sotto azione di taglio: Allegati C2, C3, C4
  - 5 Resistenza caratteristica alla rottura per fatica del bordo di calcestruzzo sotto azione di taglio: Allegati C2, C3, C4
  - 6 Resistenza caratteristica alla rottura per fatica per pry-out del calcestruzzo sotto azione di taglio: Allegati C2, C3, C4
  - 7 Resistenza caratteristica alla rottura per fatica sotto azione di trazione e di taglio: Allegati C1 - C4
  - 8 Fattore di trasferimento del carico per azione di trazione e di taglio: Allegati C1 - C4
  
8. Documentazione tecnica appropriata e/o documentazione tecnica specifica: **-**

La prestazione del prodotto sopra identificato è conforme all'insieme delle prestazioni dichiarate. La presente dichiarazione di prestazione è emessa, in conformità al regolamento (UE) n. 305/2011, sotto la sola responsabilità del fabbricante sopra identificato.

Firmato a nome e per conto del fabbricante da:

Alexander Zanocco, Amministratore Delegato Vendite e Amministratore Delegato Ricerca & Sviluppo  
Tumlingen, 2026-04-14

Dieter Pfaff, Capo della Federazione Internazionale della Produzione e Gestione della Qualità

Questa Dichiarazione di Prestazione (DoP) è stata preparata in varie lingue. In caso di contestazioni sull'interpretazione, prevarrà sempre la versione inglese.

L'Appendice include informazioni volontarie e complementari in lingua inglese che superano i requisiti di legge (lingua specificata in modo neutrale).

8	Load transfer factor for tension and shear loading:  <b>Fattore di trasferimento del carico per azione di trazione e di taglio:</b>	$\Psi_{FN}$ , $\Psi_{FV}$

## Specific Part

### 1 Technical description of the product

The "fischer injection system FIS EM Plus dynamic" is a bonded fastener consisting of a cartridge with injection mortar fischer FIS EM Plus and a steel element according to Annex A3.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic (Assessment method C: Linearized function)	Performance
Characteristic fatigue resistance under cyclic tension loading	
Characteristic steel fatigue resistance $\Delta N_{Rk,s,0,n}$ ( $n = 1$ to $n = \infty$ )	See Annex C1, C3 and C4
Characteristic concrete cone and splitting fatigue resistance $\Delta N_{Rk,c,0,n}$ $\Delta N_{Rk,sp,0,n}$ ( $n = 1$ to $n = \infty$ )	
Characteristic combined pull-out /concrete cone fatigue resistance $\Delta \tau_{Rk,p,0,n}$ ( $n = 1$ to $n = \infty$ )	
Characteristic fatigue resistance under cyclic shear loading	
Characteristic steel fatigue resistance $\Delta V_{Rk,s,0,n}$ ( $n = 1$ to $n = \infty$ )	See Annex C2, C3 and C4
Characteristic concrete edge fatigue resistance $\Delta V_{Rk,c,0,n}$ ( $n = 1$ to $n = \infty$ )	
Characteristic concrete pry out fatigue resistance $\Delta V_{Rk,cp,0,n}$ ( $n = 1$ to $n = \infty$ )	

<b>Essential characteristic (Assessment method C: Linearized function)</b>	<b>Performance</b>
Characteristic fatigue resistance under cyclic combined tension and shear loading	
Characteristic steel fatigue resistance $a_s$ ( $n = 1$ to $n = \infty$ )	See Annex C1 to C4
Load transfer factor for cyclic tension and shear loading	
Load transfer factor $\psi_{FN}, \psi_{FV}$	See Annex C1 to C4

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with European Assessment Document No. 330250-01-0601, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

**5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

## Installation conditions

fischer anchor rod FIS A or RG M with fischer injection system FIS EM Plus

**Pre-positioned installation with dynamic set** (annular gap filled with mortar)

Size: M12, M16, M20, M24

**Push through installation with dynamic set** (annular gap filled with mortar)

Size: M12, M16, M20, M24

**Push through installation with washer and centering sleeve** (annular gap filled with mortar)

Size: M12, M16, M20, M24

## Specifications of intended use part 2

### Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibers of strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021.

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc plated steel, stainless steel R).
- For all other conditions according to EN 1993-1-4:2006+A1:2015 corresponding to corrosion resistance classes to Annex A4 Table A4.1.

### Design:

- Fastenings have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages have to be designed in accordance with:
  - EN 1992-4:2018 and
  - EOTA Technical Report TR 061 "Design method for fasteners in concrete under fatigue cyclic loading", Edition 2023.
- Static and quasi-static loading see ETA-17/0979 of 16.12.2025.
- Fastenings shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure.
- Fastenings in stand-off installation or with a grout layer are not covered by this European Technical Assessment (ETA).

### Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: The hole shall be filled with mortar.
- Fastening depth should be marked and adhered to on installation.
- If only tension loads are involved in the application, the annular gap does not need to be filled.
- Overhead installation is allowed.
- Setting the fastener with clearance between concrete and anchor plate (only if the fastener is loaded in axial direction)

## Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		<p>Drill the hole. Nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> see <b>Table B3.1</b>.</p>
2		<p>Cleaning the drill hole: Blow out the drill hole twice, with oil free compressed air (<math>p \geq 6</math> bar).</p> 
3		<p>Brush the drill hole twice. For drill hole diameter <math>\geq 30</math> mm use a power drill. For deep holes use an extension. Corresponding brushes see <b>Table B5.1</b>.</p>
4		<p>Cleaning the drill hole: Blow out the drill hole twice, with oil free compressed air (<math>p \geq 6</math> bar).</p> 

Go to step 5 **Annex B7**

## Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		<p>Check a suitable hollow drill (see <b>Table B1.1</b>) for correct operation of the dust extraction.</p>
2		<p>Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.</p> <p>Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> see <b>Table B3.1</b>.</p>

Go to step 5 **Annex B7**.

**fischer FIS EM Plus dynamic**

**Intended use**

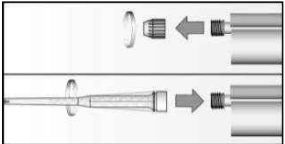

Installation instructions part 1; injection mortar system FIS EM Plus

**Annex B6**

Appendix 12 / 19

# Installation instructions part 2; injection mortar system FIS EM Plus

## Preparing the cartridge

5		<p>Remove the sealing cap. Screw on the static mixer (the spiral in the static mixer must be clearly visible).</p>
6		<p>Place the cartridge into the dispenser.  When using the foilbag, the foil container holder must be used.</p>
7		<p>Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey.</p>

Go to step 8 (Pre-positioned installation **Annex B8** or push through installation **Annex B9**).

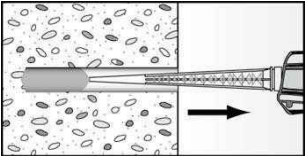

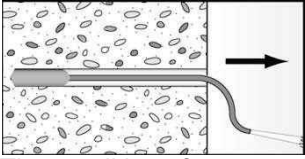

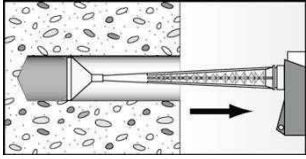

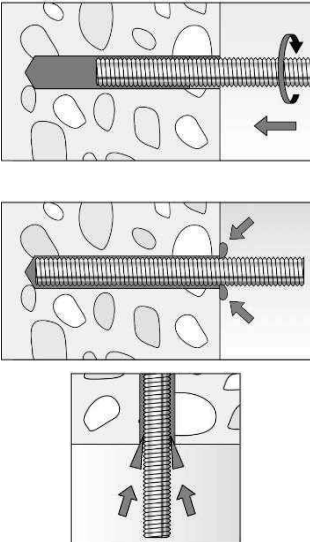

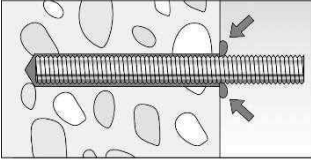

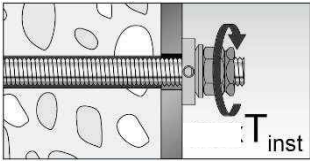

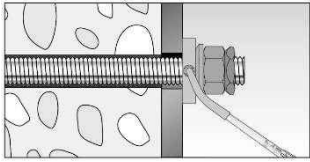

**fischer FIS EM Plus dynamic**

**Intended use**  
Installation instructions part 2; injection mortar system FIS EM Plus

**Annex B7**  
Appendix 13 / 19

# Installation instructions part 3, injection mortar system FIS EM Plus

## Pre-positioned installation

<p>8</p>		 <p>The conditions for mortar injection without extension tube can be found in <b>Table B5.2</b> For deeper drill holes, than those mentioned in <b>Table B5.2</b>, use a suitable extension tube.</p>	 <p>For overhead installation or deep holes (<math>h_0 &gt; 250\text{mm}</math>) use an injection-adapter.</p>
<p>9</p>		<p>Only use clean and oil-free metal parts. Mark the setting depth of the anchor rod. Push the fischer anchor rod down to the bottom of the hole, turning it slightly while doing so.</p> <p>After inserting the anchor rod, excess mortar must be emerged around the anchor element. If not, pull out the anchor element immediately and reinject mortar.</p> <p>For overhead installations support the anchor rod with wedges (e.g. fischer centering wedges) until the mortar begins to harden.</p>	
<p>10</p>		<p>Wait for the specified curing time <math>t_{\text{cure}}</math> see <b>Table B5.3</b>.</p>	
<p>11</p>		<p>Attach the component and install the washer and nuts - without centering sleeve. Tighten the hexagon nut with torque wrench, <math>T_{\text{inst}}</math> see <b>Table B3.1</b>. Tighten lock nut manually, then use wrench to give another quarter or half turn.</p>	
<p>12</p>		<p>The gap between anchor and fixture (annular clearance) has to be filled with mortar (FIS HB, FIS SB, FIS V Plus or FIS EM Plus) via the fillable conical washer. If only tension loads are involved in the application, the annular gap does not necessarily have to be filled.</p>

### Intended use

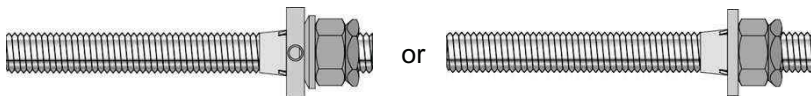

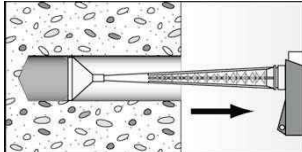

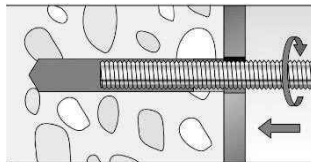

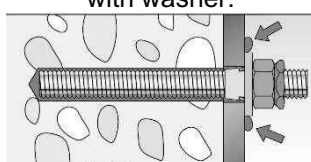

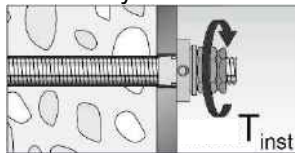

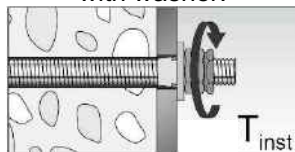

Installation instructions part 3; pre-positioned installation; injection mortar system FIS EM Plus

**Annex B8**

Appendix 14 / 19

# Installation instructions part 4, injection mortar system FIS EM Plus

## Push through installation

8		<p><b>Pre-assemble the anchor!</b> (Position of the conical washer or washer = embedment depth + fixture thickness)</p>	
9			
		<p>Only use clean and oil-free metal parts. Push the pre-assembled Fischer anchor rod into the drill hole until the conical washer or washer is in full contact with the surface, turning it slightly while doing so.</p>	
10	<p>with dynamic set:</p>  <p>with washer:</p> 	<p>After inserting the anchor rod with pre-assembled components, excess mortar must be emerged around the anchor element (minimum on one point of the conical washer or washer). If not, pull out the anchor element immediately and reinject mortar.</p>	
11		<p>Wait for the specified curing time <math>t_{cure}</math> see <b>Table B5.3</b>.</p>	
12	<p>with dynamic set:</p>  <p>with washer:</p> 	<p>Tighten the hexagon nut with torque wrench, <math>T_{inst}</math> see <b>Table B3.1</b>. Tighten lock nut manually, then use wrench to give another quarter or half turn.</p>
