

DICHIARAZIONE DI PRESTAZIONE

n. 0078 – IT

1. Codice di identificazione unico del prodotto-tipo: **fischer vite da calcestruzzo ULTRACUT FBS II**

2. Usi previsti:

Prodotto	Uso/i previsto/i
Ancoranti metallici per l'utilizzo in calcestruzzo (tipo pesante)	Per il fissaggio e/o supporto su calcestruzzo di elementi strutturali o unità pesanti come rivestimenti o controsoffitti sospesi, vedere l'appendice, specialmente gli Annessi B 1 a B 4

3. Fabbricante: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Straße 1, 72178 Waldachtal, Germania**

4. Mandatario: --

5. Sistemi di VVCP: **1**

6a. Norma armonizzata: ---

Organismi notificati: ---

6b. Documento per la valutazione europea: **ETAG 001; 2013-04**

EAD 330011-00-0601; 2014-07

Valutazione tecnica europea: **ETA-15/0352; 2016-04-12**

Organismo di valutazione tecnica: **DIBt**

Organismi notificati: **1343 – MPA Darmstadt**

7. Prestazioni dichiarate:

Resistenza meccanica e stabilità (BWR 1)

Caratteristiche essenziali	Prestazione
Valori caratteristici per la resistenza per i carichi statici e quasi statici	Vedere l'appendice, specialmente l'Annesso C 1
Resistenza caratteristica per le categorie di prestazione sismica C1 e C2	Vedere l'appendice, specialmente l'Annesso C 2
Spostamento per i carichi di tensione e taglio	Vedere l'appendice, specialmente l'Annesso C 4

Sicurezza in caso di incendio (BWR 2)

Caratteristiche essenziali	Prestazione
Reazione al fuoco	Gli ancoraggi soddisfano i requisiti per la Classe A1
Resistenza al fuoco	Vedere appendice, specialmente Annesso C 3

8. Documentazione tecnica appropriata e/o documentazione tecnica specifica: ---

La prestazione del prodotto sopra identificato è conforme all'insieme delle prestazioni dichiarate. La presente dichiarazione di responsabilità viene emessa, in conformità al regolamento (UE) n. 305/2011, sotto la sola responsabilità del fabbricante sopra identificato.

Firmato a nome e per conto del fabbricante da:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2016-04-19

- Questa Dichiarazione di Prestazione (DoP) è stata preparata in diverse lingue. In caso di divergenza d'interpretazione avrà sempre prevalenza la versione inglese.

- L'appendice include informazioni volontarie e complementari in lingua inglese (lingua specificata neutrale) eccetto i requisiti di legge

Specific Part**1 Technical description of the product**

The fischer concrete screw ULTRACUT FBS II is an anchor made of hardened carbon steel of sizes 8, 10, 12 and 14. The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment**3.1 Mechanical resistance and stability (BWR 1)**

Essential characteristic	Performance
Characteristic values for resistance for static and quasi-static loads	See Annex C 1
Characteristic resistance for seismic performance categories C1 and C2	See Annex C 2
Displacements for tension and shear loads	See Annex C 4

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	See Annex C 3

3.3 Safety in use (BWR 4)

For Basic Works Requirement Safety in use the same criteria are valid as for Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011, and European Assessment Document EAD 330011-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

fischer concrete screw ULTRACUT FBS II

Product description
Material and screw types

Annex A 2

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads: All sizes and all embedment depths
- Seismic action for Seismic Performance Category C1 and C2: Only for maximum h_{nom} .
- Fire exposure: all sizes and all embedment depths according to Annex C3.

Base materials:

- Reinforced and unreinforced normal weight concrete according to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013
- Non-cracked or cracked concrete: All sizes and all embedment depths

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions.

Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the screw is indicated on the design drawings (e.g. position of the screw relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are to be designed in accordance with:
 - ETAG 001, Annex C, design method A, Edition August 2010 or
 - CEN/TS 1992-4:2009, design method A
- Anchorages under seismic actions are to be designed in accordance with:
 - EOTA Technical Report TR 045, Edition February 2013
 - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure.
 - Fastenings in stand-off installation or with a grout layer under seismic action are not allowed.
- Anchorages under fire exposure are to be designed in accordance with:
 - EOTA Technical Report TR 020, Edition May 2004 or
 - CEN/TS 1992-4:2009, Annex D
 - It must be ensured that local spalling of the concrete cover does not occur.

Installation:

- Hammer drilling or diamond drilling or hollow drilling according to Annex B4:
All sizes and all embedment depths.
- Screw installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on site.
- In case of aborted hole: New hole must be drilled at a minimum distance of twice the depth of the aborted hole or closer, if the hole is filled with a high strength mortar and only if the hole is not in the direction of the oblique tensile or shear load.
- Adjustability according to Annex B3 for: All sizes and all embedment depths.
- Cleaning of drill hole is not necessary when using a hollow drill or:
 - If drilling vertically upwards
 - If drilling vertical downwards and the drill hole depth has been increased. We recommend to increase the drill depth with additional $3 d_0$.
- After correct installation further turning of the screw head should not be possible
- The head of the screw must be fully engaged on the fixture and show no signs of damage.
- For Seismic Performance Category C2 applications: The gap between screw shaft and fixture must be filled with mortar; compressive strength $\geq 50 \text{ N/mm}^2$ (for example FIS V, FIS EM, FIS HB or FIS SB).

Cutting diameter of drill bits	$d_{cut} \leq$	[mm]	8,45		10,45			12,50			14,50		
Cutting diameter tolerance especially for diamond drillers	d_{cut}	[mm]	8,05 - 8,45		10,05 - 10,45			12,10 - 12,50			14,10 - 14,50		
Clearance hole diameter	d_f	[mm]	10,6 – 12,0		12,8 – 14,0			14,8 – 16,0			16,9 – 18,0		
Wrench size (US,S)	SW	[mm]	13		15			17			21		
Tx size	Tx	-	40		50			-			-		
Countersunk head diameter	d_h	[mm]	18		21			-			-		
Countersunk diameter in fixture	d_c	[mm]	20		23			-			-		
Drill hole depth ¹⁾	$h_1 \geq$	[mm]	60	75	65	75	95	70	85	110	80	100	130
Drill hole depth ¹⁾ (with adjustable setting process)	$h_1 \geq$	[mm]	70	85	75	85	105	80	95	120	90	110	140
Thickness of fixture	$t_{fix}^{3)} \geq$	[mm]	0										
	$t_{fix} \leq$	[mm]	L - h_{nom}										
Length of screw	$L_{min}^{3)} =$	[mm]	50	65	55	65	85	60	75	100	65	85	115
	$L_{max} =$	[mm]	400	415	405	415	435	410	425	450	415	435	465
Torque impact screw driver ²⁾	$T_{imp,max}$	[Nm]	600		650								

¹⁾ Cleaning of drill hole is not necessary when using a hollow drill or:

- if drilling vertical upwards
- If drilling vertical downwards and the drill hole depth has been increased. We recommend to increase the drill depth with additional 3 d_0 .

²⁾ Installation with any torque impact screw driver up to the maximum mentioned torque moment ($T_{imp,max}$). Alternatively, all other tools without a mentioned torque moment are allowed (e.g. ratchet spanner). In any case it must be secured, that after installation the head of the screw must be tight down on the fixture. An easy further turning of the screw must not be possible and the head of the screw is not damaged. The torque moments $T_{imp,max}$ are not valid for manual installation (e.g. torque wrench).

³⁾ For countersunk screws the height of the head must be added to t_{fix} and L_{min} .

fischer concrete screw ULTRACUT FBS II

Intended Use
Installation parameters

Annex B 2

Adjustment

It is permissible to untighten the screw up to two times for adjustment purposes.

Therefore the screw may be untightened to a maximum
of $L_{adj} = 20$ mm off the surface of the initial fixture.

The total permissible thickness of shims added during the adjustment process is $t_{adj} = 10$ mm.

**Table B3: Minimum thickness of concrete members,
minimum spacing and edge distance**

Annex B 3

Installation instruction

	Drill the hole using hammer drill, hollow drill or diamond core drill. Drill hole diameter d_0 and drill hole depth h_1 according to table B1
a)  b)  	Option a) Clean the drill hole Option b) Cleaning of drill hole is not necessary when using a hollow drill or: - If drilling vertically upwards or - If drilling vertically downwards and the drill hole depth has been increased. We recommend to increase the drill hole depth additional 3 times d_0.
 	Installation with any torque impact screw driver up to the maximum mentioned torque moment ($T_{imp,max}$). Alternatively, all other tools without an indicated torque moment are allowed (e.g. ratchet spanner). The indicated torque moments for impact screw driver are therefore not decisive.
	After installation a further turning of the screw must not be possible. The head of the screw must be supported on the fixture and is not damaged.
1.  2.  3. 	OPTIONAL: It is permissible to adjust the screw two times. Therefore the screw may be untighten to a maximum of $L_{adj} = 20$ mm off the surface of the initial fixture. The total permissible thickness of shims added during the adjustment process is $t_{adj} = 10$ mm
	For Seismic Performance Category C2 applications: The gap between screw shaft and fixture must be filled with mortar; compressive strength ≥ 50 N/mm² for example: FIS V, FIS EM, FIS HB or FIS SB.
