

EKSPLOATACINIŲ SAVYBIŲ DEKLARACIJA

DoP 0379

fischer varžtinis inkaras FWA Plus (mechaninis inkaras naudojimui betone)

LT

1. Unikalus produkto tipo identifikacinis kodas: DoP 0379
2. Naudojimo paskirtis (-ys): Vėliau montuojamas mechaninis inkaras neįtrūkstančiam betonui, Žr. priedėlį, ypač priedus B1 - B3.
3. Gamintojas: fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Vokietija
4. Igaliotasis atstovas: –
5. Eksplotacinių savybių pastovumo vertinimo ir tikrinimo sistema (-os): 1
6. Europos vertinimo dokumentas: EAD 330232-01-0601
Europos techninis įvertinimas: ETA-24/0714; 2025-04-22
Techninio vertinimo įstaiga: ETA-Danmark A/S
Notifikuotoji (-osios) įstaiga (-os): 2873 TU Darmstadt

7. Deklaruojama (-os) eksploatacinė (-ės) savybė (-ės):

Mechaninis atsparumas ir stabilumas (BWR 1)

Charakteringas atsparumas tempimo apkrovai (statinė ir kvazistatinė apkrova) metodas A:

Atsparumas plieno lūžiui: Priedas C1
Atsparumas ištraukimo gedimui: Priedas C1
Atsparumas betono kūgio lūžiui: Priedas C1
Patvarumas: Priedas C1
Minimalus krašto atstumas ir tarpai: Priedas C2
Krašto atstumas, kad apkrova nesukeltų skilimo: Priedas C1

Charakteringas atsparumas kirpimo apkrovai (statinė ir kvazistatinė apkrova):

Atsparumas plieno lūžiui (kirpimo apkrova): Priedas C2
Atsparumas išplėšimo gedimui: Priedas C2

Charakteringas atsparumas supaprastintam projektavimui:

Metodas B: NPD
Metodas C: NPD

Poslinkiai:

Poslinkiai esant statinei ir kvazistatinei apkrovai: Priedas C2

Charakteringas atsparumas ir poslinkiai seisminio veikimo kategorijoms C1 ir C2:

Tempimo apkrovos atsparumas ir poslinkiai, kategorija C1: NPD
Tempimo apkrovos atsparumas ir poslinkiai, kategorija C2: NPD
Kirpimo apkrovos atsparumas ir poslinkiai, kategorija C1: NPD
Kirpimo apkrovos atsparumas ir poslinkiai, kategorija C2: NPD
Žiedo formos tarpo koeficientas: NPD

Sauga gaisro atveju (BWR 2)

Reakcija į ugnį: Klasė (A1)

Atsparumas ugniai:

Atsparumas ugniai plieno lūžio atveju (tempimo apkrova): NPD
Atsparumas ugniai ištraukimo gedimo atveju (tempimo apkrova): NPD
Atsparumas ugniai plieno lūžio atveju (kirpimo apkrova): NPD

Patvarumas:

Patvarumas: Priedai A3, B1

8. Atitinkami techniniai dokumentai ir (arba) specifiniai techniniai dokumentai: –

Nurodyto produkto eksploatacinės savybės atitinka visas deklaruotas eksploatacines savybes. Ši eksploatacinių savybių deklaracija pateikiama vadovaujantis Reglamentu (ES) Nr. 305/2011, atsakomybė už jos turinį tenka tik joje nurodytam gamintojui.

Pasirašyta (gamintojo ir jo vardu):

Dr. Ronald Mihala, Plėtos ir gamybos valdymo vadovas
Tumlingen, 2025-05-02

Dieter Pfaff, Tarptautinės gamybos federacijos ir kokybės valdymo vadovas

Ši eksploatacinių savybių deklaracija paruošta įvairiomis kalbomis. Jei kyla ginčų dėl teksto aiškinimo, viršenybė teikiama angliškai versijai.

Priedas, kuriame yra savanoriška ir papildoma informacija anglų kalba (kalba neutrali) ir viršija teisinius reikalavimus.

II SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT

1 Technical description of product

The FWA Plus is a torque-controlled expansion anchor made of galvanised steel. It is available in the sizes M8, M10, M12 and M16. The expansion is achieved by torque acting on the bolt. As the anchor is prestressed, the cone is pulled into the expansion sleeve and the load applied to the anchor is transferred to the concrete mainly by friction. The anchor body of sizes M8 to M16 is cold-formed. The FWA Plus is suitable for use in uncracked concrete of strength classes C20/25 to C50/60

The product description is given in Annex A and the intended use specifications of the product are detailed in Annex B.

2 Specification of the intended use(s) in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed intended working life of the anchor of 50 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

Characteristic	Assessment of characteristic
-----------------------	-------------------------------------

3.1 Mechanical resistance and stability (BWR1)

Characteristic resistance to tension load (static and quasi-static loading) Method A

Resistance to steel failure	Annex C1
Resistance to pull-out failure	Annex C1
Resistance to concrete cone failure	Annex C1
Robustness	Annex B
Minimum edge distance and spacing	Annex C2
Edge distance to prevent splitting under load	Annex C1

Characteristic resistance to shear load (static and quasi-static loading)

Resistance to steel failure under shear load	Annex C2
Resistance to pry-out failure	Annex C2

Characteristic resistance for simplified design

Method B	Not relevant
Method C	Not relevant

Displacements

Displacements under static and quasi-static loading	Annex C2
---	-----------------

Characteristic resistance and displacements for seismic performance categories C1 and C2

Resistance to tension load, displacements	No performance assessed
Resistance to shear load, displacements	No performance assessed
Factor for annual gap	No performance assessed

Characteristic	Assessment of characteristic
3.2 Safety in case of fire (BWR2)	
Reaction to fire	The anchors are made from steel classified as performance class A1 of the characteristic reaction to fire, in accordance with the provisions of EC decision 96/603/EC, amended by EC Decision 2000/605/EC.
Resistance to fire	
Fire resistance to steel failure (tension load)	No performance assessed
Fire resistance to pull-out failure (tension load)	No performance assessed
Fire resistance to steel failure (shear load)	No performance assessed

3.3 Aspects of durability

Durability	Annex B
------------	----------------

See additional information in section 3.9

3.9 General aspects related to the performance of the product

The European Technical Assessment is issued for the product on the basis of agreed data/information, deposited with ETA-Danmark, which identifies the product that has been assessed and judged. Changes to the product or production process, which could result in this deposited data/information being incorrect, should be notified to ETA-Danmark before the changes are introduced. ETA-Danmark will decide whether or not such changes affect the ETA and consequently the validity of the CE marking on the basis of the ETA and if so whether further assessment or alterations to the ETA, shall be necessary.

4 Assessment and verification of constancy of performance (AVCP) (hereinafter AVCP) system applied, with reference to its legal base.

4.1 AVCP system

According to the decision 1996/582/EC of the European Commission, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No. 305/2011) is 1.

Cone bolt manufactured by cold - forming:

- ① Cone bolt (cold formed)
- ② Expansion sleeve
- ③ Hexagon nut
- ④ Washer

Specifications of intended use				
fischer Bolt Anchor FWA Plus	M8	M10	M12	M16
Material: steel, zinc plated	✓			
Static and quasi-static loads				
Uncracked concrete				
Base materials: - Reinforced or unreinforced normal concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021 Use conditions (Environmental conditions): - Structures subject to dry internal conditions. Design: - The structural design is conducted under responsibility of a designer experienced in the field of fastenings and concrete works. - Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.) - Design of fastenings according to EN 1992-4:2018 and TR 055:2018.

Appendix 9 / 12

Installation instructions

- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener
- Hammer drilling
- Drill hole created perpendicular $\pm 5^\circ$ to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or combined shear/tension load it is not in the direction of load application

No.	Description
1	Drill the hole by hammer drilling.
2	Clean the hole.
3	Set the fastener.
4	Apply required setting torque T_{inst}
5	Installed fastener
