

EKSPLUATĀCIJAS ĪPAŠĪBU DEKLARĀCIJA

Nr. 0011 – LV

1. Unikāls izstrādājuma tipa identifikācijas numurs: **fischer Superbond**

2. Paredzētais izmantojums:

Produkts	Paredzētais lietojums
Metāl enkurstiprinājumi izmantošanai betonā (smagā tipa)	Nesošo elementu vai smagu elementu, piemēram, apšuvuma vai iekaramo griestu stiprināšanai un/vai atbalstīšanai pie betona, skatīt pielikumus, jo īpaši pielikumus B 1 - B 12

3. Ražotājs: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Germany**

4. Pilnvarotais pārstāvis: --

5. Eksploatācijas īpašību nodurības novērtējuma un pārbaudes (AVCP) sistēma(-as): **1**

6a. Saskaņotais standarts: ---

Paziņotā(-ās) iestāde(-es): ---

6b. Eiropas novērtējuma dokuments: **ETAG 001; 2013-04**

Eiropas tehniskais novērtējums: **ETA-12/0258; 2015-03-23**

Tehniskā novērtējuma iestāde: **DIBt**

Paziņotā(-ās) iestāde(-es): **1343 – MPA Darmstadt**

7. Deklarētā(-ās) eksploatācijas īpašība(-as):

Mehāniskā izturība un stabilitāte (BWR 1)

Svarīgākie raksturlielumi	Ekspluatācijas īpašības
Raksturīgās vērtības zem statiskās un kvazistatiskās slodzes konstrukcijām aprēķināšanai saskaņā ar TR 029 vai CEN/TS 1992-4:2009, Nobīde	Skatīt pielikumus, jo īpaši pielikumus C 1 - C 10
Raksturīgā izturība seismoizturības kategorijai C1 un C2 aprēķināšanai saskaņā ar Tehnisko ziņojumu TR 045, nobīdes	Skatīt pielikumus, jo īpaši pielikumus C 11 - C 13

Drošība ugunsgrēka gadījumā (BWR 2)

Svarīgākie raksturlielumi	Ekspluatācijas īpašības
Reakcija uz uguni	Enkurstiprinājumi atbilst A 1 klases prasībām
Ugunsizturība	Nav noteikts (NPD)

8. Atbilstīgā tehniskā dokumentācija un/vai īpašā tehniskā dokumentācija: ---

Iepriekš norādītā izstrādājuma eksploatācijas īpašības atbilst deklarēto eksploatācijas īpašību kopumam. Šī eksploatācijas īpašību deklarācija izdota saskaņā ar Regulu (ES) Nr. 305/2011, un par - ir atbildīgs vienīgi iepriekš norādītais ražotājs..

Parakstīts ražotāja vārdā:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2015-03-30

- Šī deklarācija par tehniskajiem raksturojumiem ir sagatavota dažādās valodās. Gadījumos, ja rodas strīdi attiecībā uz skaidrojumu, prioritāte vienmēr ir angļu versijai.

- Pielikums satur brīvprātīgi sniegtu papildu informāciju angļu valodā, kas pārsniedz (norādīts neatkarīgi no valodas) likumā noteiktās prasības.

Specific Part

1 Technical description of the product

The fischer injection system FIS SB is a bonded anchor consisting of a cartridge with injection mortar fischer FIS SB, FIS SB Low Speed or FIS SB High Speed or a mortar capsule fischer RSB and a steel element. The steel element consist of

- a threaded rod with washer and hexagon nut of sizes M8 to M30 or
- internal threaded anchor RG MI of sizes M8 to M20 or
- a deformed reinforcing bar of sizes $\phi = 8$ to 32 mm or
- a fischer rebar anchor FRA of sizes M12 to M24

The steel element is placed into a drilled hole filled with injection mortar or a mortar capsule RSB and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values under static and quasi-static action for design according to TR 029 or CEN/TS 1992-4:2009, Displacements	See Annex C 1 to C 10
Characteristic values for seismic performance categories C1 and C2 for design according to Technical Report TR 045, Displacements	See Annex C 11 to C 13

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	No performance determined (NPD)

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

3.5 Protection against noise (BWR 5)

Not applicable.

3.6 Energy economy and heat retention (BWR 6)

Not applicable.

3.7 Sustainable use of natural resources (BWR 7)

The sustainable use of natural resources was not investigated.

3.8 General aspects

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 24 June 1996 (96/582/EC) (OJ L 254 of 08.10.96 p. 62-65), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Metal anchors for use in concrete (heavy-duty type)	For fixing and/or supporting concrete structural elements or heavy units such as cladding and suspended ceilings	—	1

Specifications of intended use (part 2)

Installation temperature		+5°C to +40°C	
In-service temperature	Temperature range I	-40°C to +40°C	(max. long term temperature +24°C and max. short term temperature +40°C)
	Temperature range II	-40°C to +80°C	(max. long term temperature +50°C and max. short term temperature +80°C)
	Temperature range III	-40°C to +120°C	(max. long term temperature +72°C and max. short term temperature +120°C)
	Temperature range IV	-40°C to +150°C	(max. long term temperature +90°C and max. short term temperature +150°C)

Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition or in other particular aggressive conditions (high corrosion resistant steel)
Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages have to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with: TR 029
- Anchorages under seismic actions have to be designed in accordance with: TR 045

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: The hole shall be filled with mortar
- Marking and keeping the effective anchorage depth

Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

- Materials, dimensions and mechanical properties according to Annex A 3, Table A1
- Inspection certificate 3.1 according to EN 10204:2004, the documents should be stored
- Marking of embedment depth

Installation instructions part 1**Drilling and cleaning the hole (hammer-drilling) for mortar system FIS SB**

1		Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Tables B2, B3, B4, B5 .	
2		Blow out the drill hole twice with oil-free compressed air ($p \geq 6$ bar). The use of a manual blow-out pump is possible in uncracked concrete, if at the same time the drill hole diameter is less than 18 mm and the embedment depth h_{ef} is less than $10d$.	
3		Brush the drill hole two times. For deep holes use an extension. Corresponding brushes see Table B9	
4		Blow out the drill hole twice with oil-free compressed air ($p \geq 6$ bar). The use of a manual blow-out pump is possible in uncracked concrete, if at the same time the drill hole diameter is less than 18 mm and the embedment depth h_{ef} is less than $10d$.	

Preparing the cartridge

5		Twist off the sealing cap Twist on the static mixer (the spiral in the static mixer must be clearly visible).	
6			Place the cartridge into the dispenser.
7			Press approx. 10 cm of material out until the resin is evenly grey in colour. Don't use mortar that is not uniformly grey.

fischer Superbond

Intended use
Installation instructions part 1**Annex B 9**

Installation instructions part 2

Injection of the mortar

8	 Fill approx. 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles.	 For drill hole depth ≥ 150 mm use an extension hose.	 For overhead installation, deep holes $h_0 > 250$ mm or drill hole diameter $d_0 \geq 40$ mm use an injection-adapter.
---	--	---	--

Installation threaded rods or fischer internal threaded anchors RG MI

9	 	Only use clean and oil-free anchor elements. Mark the setting depth of the anchor. Press the threaded rod or fischer internal threaded anchor down to the bottom of the hole, turning it slightly while doing so. After inserting the anchor element, excess mortar must emerge around the anchor element.
	 For overhead installations support the anchor rod with wedges.	 For push through installation fill the annular clearance with mortar.
10	 Wait for the specified curing time, t_{cure} see Table B10.	 Mounting the fixture max T_{inst} see Tables B2, B3.

Installation reinforcing bars and fischer FRA

9		Only use clean and oil-free rebars. Mark the setting depth of the reinforcing bar. Using a turning movement, push the reinforcement bar or the FRA vigorously into the filled hole up to the insertion depth marking.
		When reaching the setting depth mark, excess mortar must emerge from the mouth of the drill hole.
10	 Wait for the specified curing time t_{cure} see Table B10.	 Mounting the fixture max T_{inst} see Table B5.

fischer Superbond

Intended use
Installation instructions part 2

Annex B 10

Installation instructions part 3**Drilling and cleaning the hole (hammer-drilling) for capsule RSB**

1		Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Tables B2, B3, B4, B5 .	
2		Blow out the drill hole four times with oil-free compressed air ($p \geq 6$ bar). The use of a manual blow-out pump is possible in uncracked concrete, if at the same time the drill hole diameter is less than 18 mm and the embedment depth h_{ef} is less than $10d$.	

Drilling and cleaning the hole (diamond-drilling) for capsule RSB

1		Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Tables B2, B3 .		Break the drill core and draw it out.
2		Flush the drill hole until the water comes clear.		
3		Blow out the drill hole two times, using oil-free compressed air ($p > 6$ bar)		
4		Brush the drill hole two times using a power drill. Corresponding brushes see Table B9		
5		Blow out the drill hole two times, using oil-free compressed air ($p > 6$ bar)		

fischer Superbond

Intended use
Installation instructions part 3**Annex B 11**

Installation instructions part 4

Installation fischer anchor rods RGM or fischer internal threaded anchors RG MI with capsule RSB

6		Resin capsule RSB or two RSB mini, must be pushed into the drill hole by hand.		Depending on the anchor being installed, use a suitable setting tool.
7			Only use clean and grease-free anchors. Using a suitable adapter, drive the RG M or fischer internal threaded anchor RG MI into the capsule using a hammer drill set on rotary hammer action. Stop when the anchor reaches the bottom of the hole and is set to the correct embedment depth.	
8		When reaching the correct embedment depth, excess mortar must emerge from the mouth of the drill hole. If not, the anchor must be pulled out directly and a second resin capsule must be pushed into the drill hole. Setting process must be repeated (7).		
9		Wait for the specified curing time, t_{cure} see Table B10 .		Mounting the fixture max T_{inst} see Tables B2, B3 .

 Displacement for long term load = $\delta_{V\infty} \cdot V_d / 1,4$
 (V_d : design shear resistance)

fischer Superbond

Performances

Displacements threaded rods and fischer internal threaded anchor RG MI

Annex C 9

Table C15: Displacements under tension load for reinforcing bars¹⁾

Size	Ø	8	10	12	14	16	20	25	28	32
Un-cracked and cracked concrete; temperature range I, II, III, IV										
Displacement	δ_{N0}	[mm/(N/mm ²)]	0,07	0,08	0,09	0,09	0,10	0,11	0,12	0,13
Displacement	$\delta_{N\infty}$	[mm/(N/mm ²)]	0,12	0,13	0,13	0,15	0,16	0,16	0,18	0,20

¹⁾ Calculation of the displacement for design load
Displacement for short term load = $\delta_{N0} \cdot \tau_{sd} / 1,4$
Displacement for long term load = $\delta_{N\infty} \cdot \tau_{sd} / 1,4$
(τ_{sd} : design bond strength)

Table C16: Displacements under shear load for reinforcing bars¹⁾

Size	Ø	8	10	12	14	16	20	25	28	32
Un-cracked and cracked concrete; temperature range I, II, III, IV										
Displacement	δ_{V0}	[mm/kN]	0,18	0,15	0,12	0,10	0,09	0,07	0,06	0,05
Displacement	$\delta_{V\infty}$	[mm/kN]	0,27	0,22	0,18	0,16	0,14	0,11	0,09	0,08

¹⁾ Calculation of the displacement for design load
Displacement for short term load = $\delta_{V0} \cdot V_d / 1,4$
Displacement for long term load = $\delta_{V\infty} \cdot V_d / 1,4$
(V_d : design shear resistance)

Table C17: Displacements under tension load for fischer rebar anchors FRA¹⁾

Size			M12	M16	M20	M24
Un-cracked and cracked concrete; temperature range I, II, III, IV						
Displacement	δ_{N0}	[mm/(N/mm ²)]	0,09	0,10	0,11	0,12
Displacement	$\delta_{N\infty}$	[mm/(N/mm ²)]	0,13	0,16	0,16	0,18

¹⁾ Calculation of the displacement for design load
Displacement for short term load = $\delta_{N0} \cdot \tau_{sd} / 1,4$
Displacement for long term load = $\delta_{N\infty} \cdot \tau_{sd} / 1,4$
(τ_{sd} : design bond strength)

Table C18: Displacements under shear load for fischer rebar anchors FRA¹⁾

Size		M12	M16	M20	M24	
Un-cracked and cracked concrete; temperature range I, II, III, IV						
Displacement	δ_{V0}	[mm/kN]	0,12	0,09	0,07	0,06
Displacement	$\delta_{V\infty}$	[mm/kN]	0,18	0,14	0,11	0,09

¹⁾ Calculation of the displacement for design load
Displacement for short term load = $\delta_{V0} \cdot V_d / 1,4$
Displacement for long term load = $\delta_{V\infty} \cdot V_d / 1,4$
(V_d : design shear resistance)
