

## PRESTATIEVERKLARING

### DoP 0376

voor fischer anerkanaal FES met fischer kanaalbouten FBC (ankerkanalen voor gebruik in beton)

NL

1. Unieke identificatiecode van het producttype: **DoP 0376**
2. Beoogd(e) gebruik(en): **Ankerkanaal voor gebruik in gescheurd of ongescheurd beton, zie bijlage, met name de bijlagen B1- B8.**
3. Fabrikant: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Duitsland**
4. Gemachtigde: **-**
5. Het systeem of de systemen voor de beoordeling en verificatie van de prestatiebestendigheid: **1**
6. Europees beoordelingsdocument: **EAD 330008-04-0601, Edition 07/2024**  
Europeese technische beoordeling: **ETA-18/0862; 2025-05-19**  
Technische beoordelingsinstantie: **DIBt- Deutsches Institut für Bautechnik**  
Aangemelde instantie(s): **2873 TU Darmstadt**
7. Aangegeven prestatie(s):

#### **Mechanische weerstand en stabiliteit (BWR 1)**

##### **Kenmerkende weerstand tegen spanningsbelasting (statische en quasi-statische belasting):**

- 1) Weerstand tegen staalbreuk van ankers: Bijlage C1
- 2) Weerstand tegen staalbreuk van de verbinding tussen ankers en goot: Bijlage C1
- 3) Weerstand tegen staalbreuk van de gootlippen en vervolgens uittrekken van de gootbout: Bijlage C1
- 4) Weerstand tegen staalbreuk van kanaalbout: Bijlage C10
- 5) Weerstand tegen staalbreuk door overschrijding van de buigsterkte van het kanaal: Bijlages A5, C2
- 6) Maximaal installatiemoment om schade tijdens de installatie te voorkomen: Bijlage B4
- 7) Weerstand tegen uittrekken: Bijlages C3,C4
- 8) Weerstand tegen betonnen kegelbreuk: Bijlages B3, C3, C4
- 9) Minimale afstand tussen de randen, tussenruimte en dikte van de elementen om te voorkomen dat het beton splijt tijdens de installatie: Bijlages A5, B3
- 10) Randafstand om spleetbreuk onder belasting te voorkomen: Bijlages C3, C4
- 11) Weerstand tegen doorslaan - dragend gebied van de kop: Bijlage A4

##### **Kenmerkende weerstand tegen schuifbelasting (statische en quasi-statische belasting):**

- 12) Weerstand tegen staalbreuk van kanaalbout onder afschuifbelasting zonder hefboomarm: Bijlage C10
- 13) Weerstand tegen staalbreuk door buiging van de kanaalbout onder afschuifbelasting met hefboomarm: Bijlage C11
- 14) Weerstand tegen staalbreuk van de gootlippen, staalbreuk van de verbinding tussen het anker en de goot of staalbreuk van het anker (afschuifbelasting in dwarsrichting): Bijlages C6, C7
- 15) Weerstand tegen staalbreuk van de verbinding tussen kanaallippen en kanaalbout (afschuifbelasting in de lengterichting van het kanaal): Bijlage C8
- 16) Factor voor installatiegevoeligheid (Longitudinale afschuiving): Bijlage C8
- 17) Weerstand tegen staalbreuk van het anker (Longitudinale afschuiving): Bijlages C6, C7
- 18) Weerstand tegen staalbreuk van de verbinding tussen anker en kanaal (afschuifbelasting in de lengterichting van het kanaal): Bijlages C6, C7

##### **Karakteristieke weerstand onder gecombineerde statische en quasi-statische trek- en schuifbelasting**

- 21) Weerstand tegen staalbreuk van het anerkanaal: Bijlage C9

##### **Karakteristieke weerstand onder vermoeiings trekbelasting:**

- 22) Vermoeiingsweerstand tegen staalbreuk van het hele systeem (continue of tri-lineaire functie, Beoordelingsmethode A1, A2): NPD
- 23) Vermoeiingsgrens weerstand tegen staalbreuk van het hele systeem (Beoordelingsmethode B): NPD
- 24) Vermoeiingsweerstand tegen staalbreuk van het hele systeem (Gelineariseerde functie, Beoordelingsmethode C): NPD
- 25) Weerstand tegen vermoeiing door betongerelateerd falen (exponentiële functie, Beoordelingsmethode A1, A2): NPD
- 26) Vermoeiingsgrens weerstand tegen betongerelateerd falen (Beoordelingsmethode B): NPD
- 27) Weerstand tegen vermoeiing door betongerelateerd falen (Gelineariseerde functie, Beoordelingsmethode C): NPD

##### **Karakteristieke weerstand onder seismische belasting (seismische prestatiecategorie C1)**

- 28) Weerstand tegen staalfalen onder seismische trekbelasting (seismische prestatiecategorie C1): Bijlages C12, C14
- 29) Weerstand tegen staalfalen onder seismische afschuifbelasting voor afschuifkracht in dwarsrichting (seismische prestatiecategorie C1): Bijlages C13, C14
- 30) Weerstand tegen staalfalen onder seismische afschuifbelasting voor afschuifkracht in de lengterichting van het kanaal (seismische prestatiecategorie C1): Bijlage C13

**Karakteristieke weerstand onder statische en quasi-statische trek- en/of afschuifbelasting**

31) Verplaatsingen: Bijlagen C5, C9

**Veiligheid in geval van brand (BWR 2)**

32) Reactie op brand: Klasse (A1)

33) Weerstand tegen vuur: Bijlagen C15, C16

**Duurzaamheid:**

34) Duurzaamheid: Bijlagen A7, B1

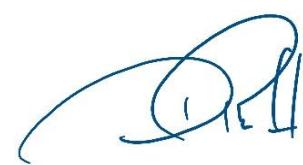

**8. Geëigende technische documentatie en/of specifieke technische documentatie:** --

De prestaties van het hierboven omschreven product zijn conform de aangegeven prestaties. Deze prestatieverklaring wordt in overeenstemming met Verordening (EU) nr. 305/2011 onder de exclusieve verantwoordelijkheid van de hierboven vermelde fabrikant verstrekt.

Ondertekend voor en namens de fabrikant door:

Dr. Ronald Mihala, Algemeen directeur Onderzoek en Ontwikkeling  
Tumlingen, 2025-06-02

Dieter Pfaff, Hoofd van de Internationale Productiefederatie en Kwaliteitsbeheer

Deze DoP is opgesteld in meerdere talen. In het geval van geschillen over de interpretatie zal de Engelse tekst altijd prevaleren.

Het aanhangsel bevat vrijwillige en aanvullende informatie in het Engels die de (taal-neutraal gespecificeerde) wettelijke vereisten overschrijdt.

## **Specific Part**

### **1 Technical description of the product**

The fischer Anchor Channel FES with fischer Channel Bolts FBC is a system consisting of a C-shaped channel profile of steel and at least two metal anchors non-detachably fixed on the channel back and fischer Channel Bolts.

The anchor channel is embedded surface-flush in the concrete. fischer Channel Bolts with appropriate hexagonal nuts and washers are fixed to the channel.

The product description is given in Annex A.

### **2 Specification of the intended use in accordance with the applicable European Assessment Document**

The performances given in Section 3 are only valid if the anchor channel is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor channel of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### **3 Performance of the product and references to the methods used for its assessment**

#### **3.1 Mechanical resistance and stability (BWR 1)**

<b>Essential characteristic</b>	<b>Performance</b>

<p>Characteristic resistance under fatigue tension loading</p> <ul style="list-style-type: none"> <li>- Fatigue resistance to steel failure of the whole system (continuous or tri-linear function, assessment method A1, A2)</li> <li>- Fatigue limit resistance to steel failure of the whole system (assessment method B)</li> <li>- Fatigue resistance to steel failure of the whole system (linearized function, assessment method C)</li> <li>- Fatigue resistance to concrete related failure (exponential function, assessment method A1, A2)</li> <li>- Fatigue limit resistance to concrete related failure (assessment method B)</li> <li>- Fatigue resistance to concrete related failure (linearized function, assessment method C)</li> </ul>	<p>No Performance assessed</p>

Essential characteristic	Performance
Characteristic resistance under seismic loading (seismic performance category C1)	
Resistance to steel failure under seismic tension loading (seismic performance category C1)	$N_{Rk,s,a,eq}$ ; $N_{Rk,s,c,eq}$ ; $N^0_{Rk,s,l,eq}$ ; $M_{Rk,s,flex,eq}$ see Annex C12
Resistance to steel failure under seismic shear loading for shear load in transverse direction (seismic performance category C1)	$N_{Rk,s,eq}$ see Annex C14
Resistance to steel failure under seismic shear loading for shear load in longitudinal channel axis (seismic performance category C1)	$V_{Rk,s,eq}$ see Annex C14 $V^0_{Rk,s,l,y,eq}$ ; $V_{Rk,s,c,y,eq}$ ; $V_{Rk,s,a,y,eq}$ see Annex C13
Characteristic resistance under static and quasi-static tension and/or shear loading	$V_{Rk,s,l,x,eq}$ ; $V_{Rk,s,a,x,eq}$ ; $V_{Rk,s,c,x,eq}$ see Annex C13
Displacements	$\delta_{N0}$ ; $\delta_{N\infty}$ see Annex C5 $\delta_{V,y,0}$ ; $\delta_{V,y,\infty}$ ; $\delta_{V,x,0}$ ; $\delta_{V,x,\infty}$ see Annex C9

### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Characteristic resistance to fire	$N_{Rk,s,fi}$ ; $V_{Rk,s,y,fi}$ see Annex C15

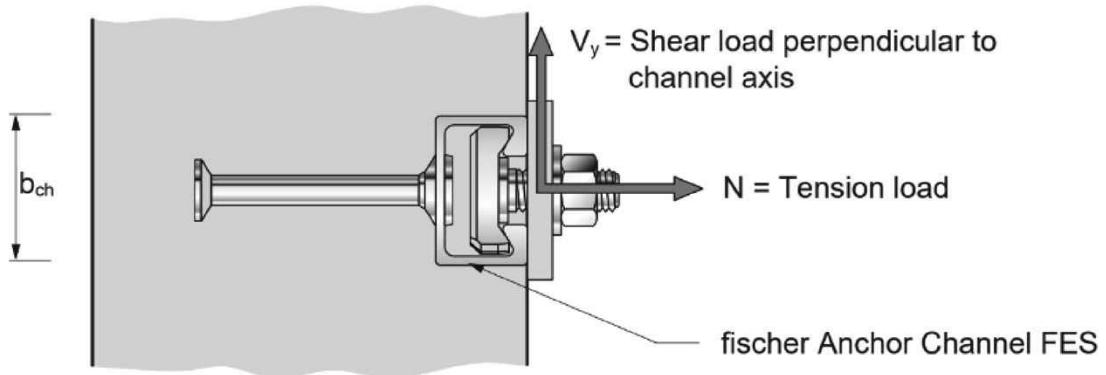

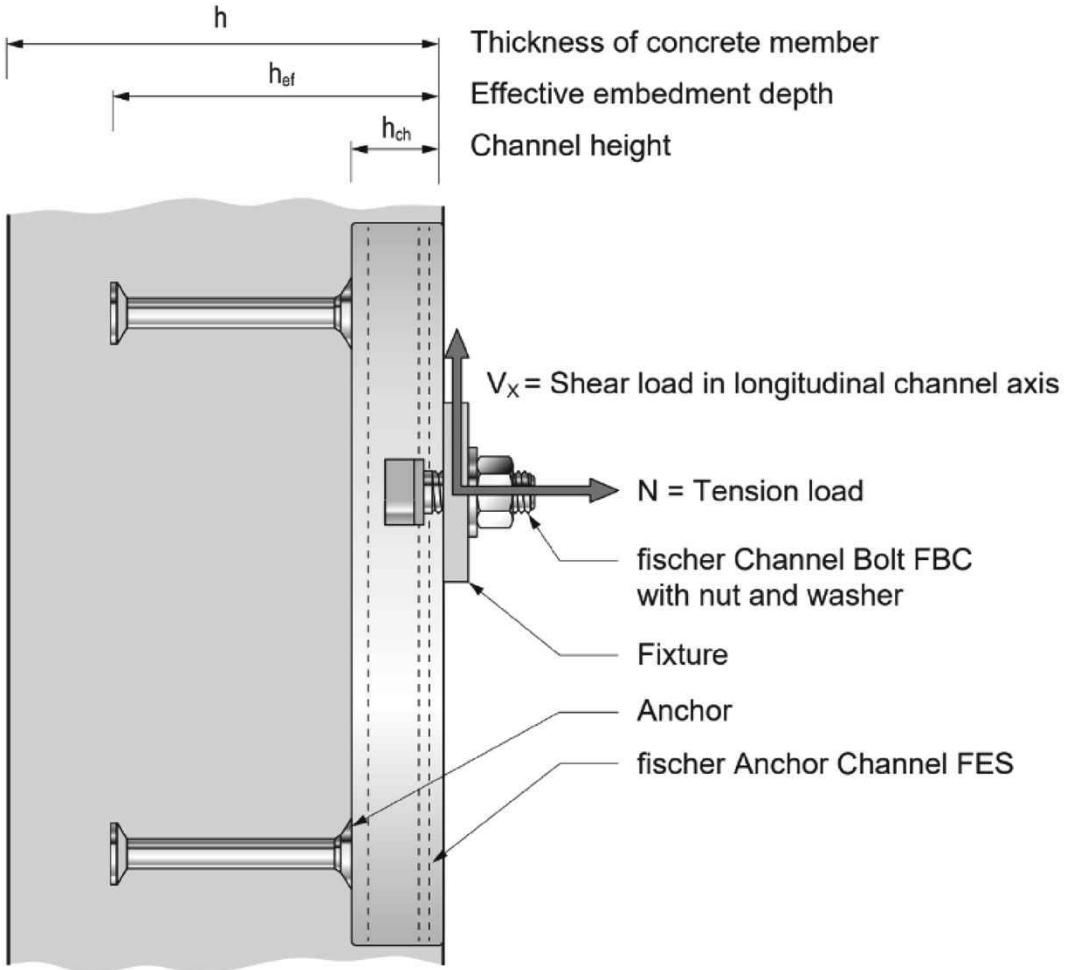

### 3.3 Aspects of durability linked with the Basic Works Requirements

Essential characteristic	Performance
Durability	See Annex B1

### 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 330008-04-0601, the applicable European legal act is: [2000/273/EC].

The system to be applied is: 1

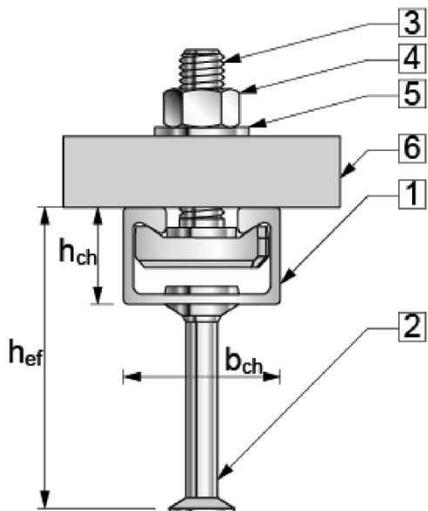

### fischer Anchor Channel FES with fischer Channel Bolts FBC

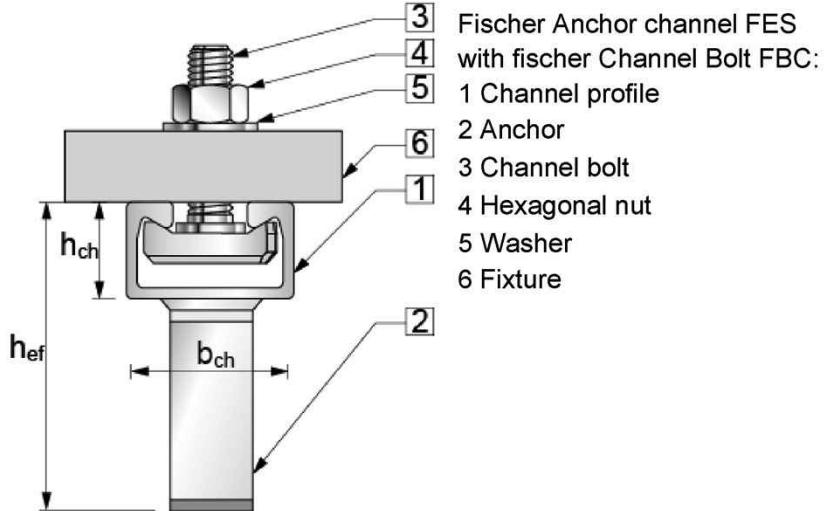

**Product Description**  
Installed condition

Annex A1

Appendix 4 / 34

Round Anchor

I-Anchor

#### Marking of the fischer anchor channel FES:

e.g.:  I-50/30

	= Identifying mark of the manufacturer
I	= Additional marking for I-anchors No marking for round anchors
50/30(-P)	= Anchor channel size (29/20; 38/23; 40/22; 50/30; 52/34, 28/15; 38/17; 40/25; 49/30; 54/33)
P	= Additional marking for P-version

Stamped into back of channel

Optional: printed on channel web or channel lips

H = Hot rolled channel, C = Cold formed channel

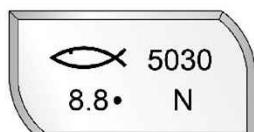

No marking for material acc. Annex A7 Table A7.1

(Channel profile)

#### Marking of the fischer channel bolt FBC:

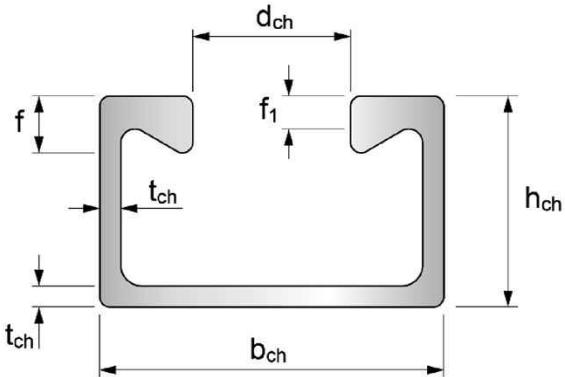

e.g.:  5030 8.8 N

	= Identifying mark of the manufacturer
5030	= Size of channel bolt
8.8	= Steel grade
A4-70	= Stainless steel
N	= Notching channel bolt (if applicable)
•	= Electroplated
	No marking for hot-dip galvanised

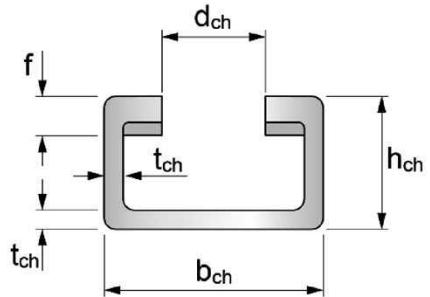

Additional marking of channel bolt (smooth, serrated, notching channel bolt head) according to Annex A6 at the top of thread.

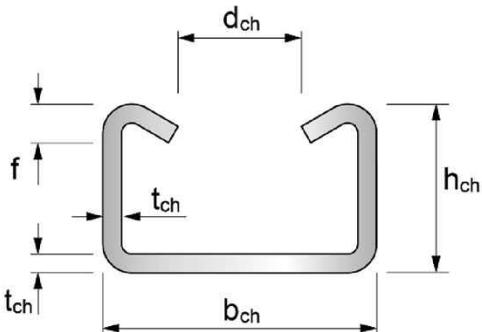

#### fischer Anchor Channel FES with fischer Channel Bolts FBC

**fischer Anchor Channel FES with fischer Channel Bolts FBC**

**Product Description**  
Materials

Annex A7

Appendix 10 / 34

## Specification of intended use

### Anchor channels and channel bolts subject to:

- Static and quasi-static tension, shear perpendicular to the longitudinal axis of the channel.
- Static and quasi-static shear in the direction of the longitudinal axis of the channel.  
(anchor channels FES-H(-I)-40/22(-P) with notching channel bolts FBC-N-40/22, anchor channels FES-H(-I)-50/30(-P) or FES-H(-I)-52/34 with notching channel bolts FBC-N-50/30 and serrated anchor channels FES-H-S in combination with serrated channel bolts FBC-S).
- Seismic tension, seismic shear perpendicular to the longitudinal axis of the channel and seismic shear in the direction of the longitudinal axis of the channel (seismic performance category C1)  
(anchor channels and channel bolts according to Annex C12).
- Fire exposure for concrete strength class C20/25 to C50/60 for tension and shear perpendicular to the longitudinal axis of the channel  
(anchor channels and channel bolts according to Annex C15).

### Base materials:

- Reinforced or unreinforced compacted normal weight concrete without fibres according to EN 206:2013+A2:2021.
- Strength classes C12/15 to C90/105 according to EN 206:2013+A2:2021.
- Cracked or uncracked concrete.

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions  
(anchor channels and channel bolts according to Annex A7, Table A7.1, column 2a and 2b, 3).
- Structures subject to internal conditions with usual humidity (e.g. kitchens, bathrooms and laundries in residential buildings, exceptional permanent damp conditions and application under water)  
(anchor channels and channel bolts according to Annex A7, Table A7.1, column 2b, 3).
- According to EN 1993-1-4:2006 +A1:2015+A2:2020 relating to corrosion resistance class CRC III  
(anchor channels, channel bolts, washers and nuts made of stainless steel according to Annex A7, Table A7.1, column 3).

### Design:

- Anchor channels are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor channel and channel bolts are indicated on the design drawings (e.g. position of the anchor channel relative to the reinforcement or to supports).
- For static and quasi-static loading as well as seismic loading (performance category C1) and fire exposure the anchor channels are designed in accordance with EN 1992-4:2018 and EOTA TR 047 "Design of Anchor Channels", May 2021.
- The characteristic resistances are calculated with the minimum effective embedment depth.

fischer Anchor Channel FES with fischer Channel Bolts FBC

Intended Use  
Specifications

Annex B1

Appendix 11 / 34

**Installation:**

- The installation of anchor channels is carried out by appropriately qualified personnel under the supervision of the person responsible for the technical matters on site.
- Use of the anchor channels only as supplied by the manufacturer - without any manipulations, repositioning or exchanging of channel components.
- Cutting of anchor channels is allowed only if pieces according to Annex A5, Table A5.1 are generated including end spacing  $x$  and minimum channel length  $l_{min}$  and only to be used in dry internal conditions. For anchor channels made of stainless steel there are no restrictions regarding corrosion resistance when using channel pieces, if cutting is done professionally and contamination of cutting edges with corroding material is avoided.
- Installation in accordance with the installation instruction given in Annexes B5, B6, B7 or B8.
- The anchor channels are fixed on the formwork, reinforcement or auxiliary construction such that no movement of the channels will occur during the time of laying the reinforcement and of placing and compacting the concrete.
- The concrete around the head of the anchors is properly compacted. The channels are protected from penetration of concrete into the internal space of the channels.
- Washers may be chosen according to Annex A7 and provided separately by the user.
- Orientating the channel bolt (groove according to Annex B6, B7 and B8) rectangular to the channel axis.
- The required installation torque given in Annex B4 must be applied and must not be exceeded.
- Notching channel bolts FBC-N may be used only once after applying the installation torque  $T_{inst,s}$ .
