Specific part

1 Technical description of the product

The fischer frame fixing DuoXpand 8 and DuoXpand 10 is a plastic anchor consisting of a plastic sleeve made of polyamide and polyoxymethylene and an accompanying specific screw of galvanised steel, of galvanised steel with an additional organic layer or of stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 3 and C 4

3.2 Mechanical resistance and stability (BWR 4)

Essential characteristic	Performance
Resistance to steel failure under tension loading	See Annex C 1
Resistance to steel failure under shear loading	See Annex C 1
Resistance to pull-out or concrete failure under tension loading (base material group a)	See Annex C 1
Resistance in any load direction without lever arm (base material group b, c, d)	See Annexes C 9 – C 15
Edge distance and spacing (base material group a)	See Annex B 2
Edge distance and spacing (base material group b, c, d)	See Annex B 3 and B 4
Displacements under short-term and long-term loading	See Annex C 2

3.3 Aspects of durability linked with the Basic Works Requirements

Essential characteristic	Performance
Durability	See Annex B1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD 330284-00-0604 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

Installed anchor DuoXpand

Legend

- d_0 = Nominal drill hole diameter
- h_{nom} = Overall plastic anchor embedment depth in the base material
- h_1 = Depth of drill hole to deepest point
- h = Thickness of member (base material)
- t_{fix} = Thickness of fixture and / or non-load-bearing layer

Product description
Dimensions and materials

Annex A 3

Appendix 5 / 25

Specifications of intended use

Anchorage subject to:

- Static or quasi-static loads: DuoXpand 8 and DuoXpand 10.
- Redundant non-structural systems.
- Fire exposure for reinforced or unreinforced compacted normal weight concrete without fibres, strength classes $\geq C20/25$ as per EN 206 and solid brick masonry (for dry masonry only) with mean compressive strength $\geq 35 \text{ N/mm}^2$ as per EN 771, see Annex C 3 and Annex C 4: DuoXpand 10.

Base materials:

- Reinforced or unreinforced compacted normal weight concrete without fibres, strength classes $\geq C12/15$ (base material group "a"), as per EN 206, see Annex C 1 and C 5.
- Solid brick masonry (base material group "b") as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 5, C 9, C 10. Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow brick masonry (base material group "c"), as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 5 – C 8 and C 10 – C 14.
- Reinforced autoclaved aerated concrete (base material group "d"), as per EN 12602, and unreinforced autoclaved aerated concrete (base material group "d") as per EN 771-4, see Annex C 5 + C 15.
- Mortar strength class of the masonry $\geq M2,5$ in accordance with EN 998-2. In case of fire, all joints must be completely filled with mortar.
- For other comparable base materials of the base material group "a", "b", "c" and "d" the characteristic resistance of the anchor may be determined by job site tests in accordance with EOTA TR 051.

Temperature Range:

- c: $-40 \text{ }^\circ\text{C}$ to $50 \text{ }^\circ\text{C}$ (max. short term temperature $+50 \text{ }^\circ\text{C}$ and max long term temperature $+30 \text{ }^\circ\text{C}$)
- b: $-40 \text{ }^\circ\text{C}$ to $80 \text{ }^\circ\text{C}$ (max. short term temperature $+80 \text{ }^\circ\text{C}$ and max long term temperature $+50 \text{ }^\circ\text{C}$)

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: Special screw made of zinc coated steel or stainless steel.
- The specific screw made of galvanised steel or galvanised steel with an additional organic layer may also be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore, there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e.g. undercoating or body cavity protection for cars).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist: Special screw made of stainless steel of corrosion resistance class CRC III.

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- The anchorages are to be designed in accordance with EOTA TR 064 under the responsibility of an engineer experienced in anchorages and concrete/masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.
- For requirements to resistance to fire local spalling of the concrete cover and cracks in masonry under fire exposure over 0,3 mm must be avoided.

Installation:

- Hole drilling by the drilling method in accordance with Annex C 1 for base material group "a", and in accordance with Annexes C 9 – C 15 for base material group "b", "c" and "d".
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature: $-20 \text{ }^\circ\text{C}$ to $+40 \text{ }^\circ\text{C}$.
- Exposure to UV due to solar radiation of the anchor not protected by rendering ≤ 6 weeks.
- No ingress of water in the borehole at temperatures $< 0^\circ\text{C}$.

Intended use
Specifications

Annex B 1

Appendix 6 / 25

Table B2.1: Installation parameters

Anchor type		DuoXpand 8	DuoXpand 10
Nominal drill hole diameter	$d_0 =$ [mm]	8	10
Cutting diameter of drill bit	$d_{cut} \leq$ [mm]	8,45	10,45
Overall plastic anchor embedment depth in the base material ¹⁾	$h_{nom1} \geq$ [mm]	50	50
	$h_{nom2} \geq$ [mm]	70	70
	$h_{nom3}^{2)} \geq$ [mm]	-	140
	$h_{nom4}^{2)} \geq$ [mm]	-	160
Depth of drill hole to deepest point	$h_{1,1} \geq$ [mm]	60	60
	$h_{1,2} \geq$ [mm]	80	80
	$h_{1,3}^{2)} \geq$ [mm]	-	150
	$h_{1,4}^{2)} \geq$ [mm]	-	170
Diameter of clearance hole in the fixture	$d_f \leq$ [mm]	8,5	10,5

¹⁾ For base material group "c": If the embedment depth is higher than h_{nom} given in the Table B2.1, job site tests have to be carried out in accordance with EOTA TR 051.

²⁾ Only valid for Sepa Parpaing see Annex C 13 at anchor length $l_d \geq 160$ mm.

Table B2.2: Minimum thickness of member, edge distances and spacing in concrete – base material group "a"⁽¹⁾

Anchor Type	Embedment depth h_{nom} [mm]	Concrete strength class	Minimum thickness of member h_{min} [mm]	Characteristic edge distance c_{cr} [mm]	Characteristic spacing s_{cr} [mm]	Minimum edge distances and spacing ²⁾ c_{min}, s_{min} [mm]
DuoXpand 8	≥ 50	C12/15	80	70	90	$s_{min} = 70$ for $c \geq 140$ $c_{min} = 70$ for $s \geq 140$
		\geq C16/20		50	65	$s_{min} = 50$ for $c \geq 100$ $c_{min} = 50$ for $s \geq 100$
	≥ 70	C12/15	100	70	100	$s_{min} = 70$ for $c \geq 140$ $c_{min} = 70$ for $s \geq 140$
		\geq C16/20		50	70	$s_{min} = 50$ for $c \geq 100$ $c_{min} = 50$ for $s \geq 100$
DuoXpand 10	≥ 50	C12/15	80	70	100	$s_{min} = 70$ for $c \geq 140$ $c_{min} = 70$ for $s \geq 140$
		\geq C16/20		50	70	$s_{min} = 50$ for $c \geq 100$ $c_{min} = 50$ for $s \geq 100$
	≥ 70	C12/15	100	70	115	$s_{min} = 70$ for $c \geq 140$ $c_{min} = 70$ for $s \geq 140$
		\geq C16/20		50	80	$s_{min} = 50$ for $c \geq 100$ $c_{min} = 50$ for $s \geq 100$

¹⁾ See scheme of edge distances and spacing Annex B 3.

²⁾ Intermediate values by linear interpolation.

Fixing points with spacing $a \leq s_{cr}$ are considered as a group with a maximum characteristic resistance $N_{RK,p}$ as per Table C1.2. For spacing $a > s_{cr}$ the anchors are considered as single anchors, each with a characteristic resistance $N_{RK,p}$ as per Table C1.2.

Installation instructions

The following pictures show fixing through timber in concrete and hollow brick –
Summary of all kind of masonry bricks see Annex C 5 – C 8.

Solid bricks

Hollow or perforated bricks

1. Drill the bore hole as per Table B2.1 using the drilling method described in the corresponding Annex C.

For application in hollow or perforated bricks, removal of bore dust is not necessary.

2. For use in base material group "a" (concrete), "b" (solid bricks), "d" (autoclaved aerated concrete): Remove dust from borehole.

3. Insert anchor (screw and sleeve) by using a hammer until the collar of the plastic sleeve is flush with the surface of the fixture.

4. The screw is screwed-in until the head of the screw touches the sleeve. The anchor is correctly installed, if the head of the screw fits tight on the surface and nor the anchor sleeve neither the screw cannot be turned-in any further.

5. Correctly installed anchor.

Annex C 13

Appendix 23 / 25

Table C14.1: Characteristic resistance F_{Rk} in [kN] for use in hollow or perforated masonry - base material group „c“

Base material; bulk density [kg/dm ³] [Supplier Title, country] Geometry, DF or nominal size (L x W x H) [mm] and drilling method	Mean compressive strength as per EN 771/ Minimum compressive strength single brick ⁴⁾ [N/mm ²]	Characteristic resistance F_{Rk} [kN] Temperature range 30/50 °C and 50/80 °C			
		DuoXpand 8		DuoXpand 10	
		h_{nom} [mm] ¹⁾			
		50	70	50	70
Hollow brick lightweight concrete Hbl; $\rho \geq 1,0$ as per EN 771-3 e.g. <i>Indelasa, ES</i>  500x200x200 Rotary drilling	2,5/2,0	0,6	0,5	0,4	0,6
	4,8/-	1,2	0,9	0,75	0,9 / 1,2²⁾
Hollow brick lightweight concrete Hbl; $\rho \geq 0,9$ as per EN 771-3 e.g. <i>Knobel, DE</i>  500x240x240 Rotary drilling	2,5/2,0	0,9	0,75 / 0,9²⁾	0,9	0,6
	5,0/4,0	1,5 / 2,0²⁾	1,5 / 2,0²⁾	2,0	1,5
	6,2/-	2,0 / 2,5²⁾	2,0 / 2,5²⁾	2,5	1,5
Partial factor	γ_{Mm}³⁾ [-]	2,5			

- 1) The lowest resistance of two consecutive embedment depths may be used for the intermediate embedment depths.
- 2) Only valid for temperature range "c" (30/50 °C).
- 3) In absence of other national regulations.
- 4) The compressive strength of the single brick must not be less than 80% of the mean compressive strength.

fischer frame fixing DuoXpand

Performances

Characteristic resistance for use in hollow or perforated masonry

Annex C 14

Appendix 24 / 25

Table C15.1: Characteristic resistance F_{Rk} in [kN] for use in unreinforced autoclaved aerated concrete - base material group „d“

Base material Size (L x W x H) [mm] and drilling method	Mean compressive strength as per EN 771-4 $f_{cm,decl}$ [N/mm ²]	Characteristic resistance F_{Rk} [kN] Temperature range 30/50 °C and 50/80 °C	
		DuoXpand 8	DuoXpand 10
		h_{nom} [mm]	
		≥ 70	
Autoclaved aerated concrete as per EN 771-4 e.g. (500x120x300) e.g. (500x250x300) Hammer drilling	2,8	0,3	0,4 / 0,5 ¹⁾
	4,0	0,75	0,6
	5,0	0,9 / 1,2 ¹⁾	0,75
	6,9	1,5 / 2,0 ¹⁾	0,9
Partial factor	$\gamma_{MAAC}^{2)}$ [-]	2,0	

¹⁾ Only valid for temperature range “c” (30/50 °C).

²⁾ In absence of other national regulations.

Table C15.2: Characteristic resistance F_{Rk} in [kN] for use in reinforced autoclaved aerated concrete - base material group „d“

Base material minimum member thickness h_{min} and drilling method	Compressive strength f_{ck} [N/mm ²] (compressive strength class) as per EN 12602	Characteristic resistance F_{Rk} [kN] Temperature range 30/50 °C and 50/80 °C	
		DuoXpand 8	DuoXpand 10
		h_{nom} [mm]	
		≥ 70	
Reinforced autoclaved aerated concrete AAC as per EN 12602 $h_{min} = 100 \text{ mm}^3)$ Hammer drilling	≥ 2,0 (AAC 2)	2)	0,3 ¹⁾
	≥ 2,5 (AAC 2,5)	2)	0,3 / 0,4 ¹⁾
	≥ 3,0 (AAC 3)	2)	0,4
	≥ 3,5 (AAC 3,5)	2)	0,4 / 0,5 ¹⁾
	≥ 4,0 (AAC 4)	2)	0,5 / 0,6 ¹⁾
	≥ 4,5 (AAC 4,5)	2)	0,6 / 0,75 ¹⁾
	≥ 5,0 (AAC 5)	2)	0,75
	≥ 6,0 (AAC 6)	2)	0,9
Partial factor	$\gamma_{MAAC}^{4)}$ [-]	2,0	

¹⁾ Only valid for temperature range “c” (30/50 °C).

²⁾ No performance assessed.

³⁾ For anchor groups in AAC 6 $h_{min} = 175 \text{ mm}$.

⁴⁾ In absence of other national regulations.

fischer frame fixing DuoXpand

Performances

Characteristic resistance for use in autoclaved aerated concrete and in reinforced autoclaved aerated concrete
