

DEKLARACJA WŁAŚCIWOŚCI UŻYTKOWYCH

DoP 0295

dla systemu wklejanego fischer FIS EB II (Łączniki metalowe do stosowania w betonie)

PL

1. Niepowtarzalny kod identyfikacyjny typu wyrobu: DoP 0295
2. Zamierzone zastosowanie: Mocowanie w betonie zarysowanym lub niezarysowanym, zobacz załącznik, w szczególności aneksy B1 - B11.
3. Producent: fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Niemcy
4. Upoważniony przedstawiciel: -
5. System(-y) oceny i weryfikacji stałości właściwości użytkowych: 1
6. Europejski dokument oceny: EAD 330499-01-0601, Edition 04/2020
Europejska ocena techniczna: ETA-21/0469; 2021-12-09
Jednostka ds. oceny technicznej: DIBt- Deutsches Institut für Bautechnik
Jednostka lub jednostki notyfikowane: 2873 TU Darmstadt
7. Deklarowane właściwości użytkowe:
Wytrzymałość mechaniczna i stabilność osadzenia (BWR 1)
Nośność charakterystyczna na wrywanie (nośności statyczne i quasi-statyczne):
Nośność do uszkodzenia stali: Aneksy C1, C2
Nośność na wrywanie i zniszczenie stożka betonu: Aneksy C4-C6
Nośność do wyrwania stożka betonu: Aneks C3
Odległość od krawędzi zapobiegająca pękaniu pod obciążeniem: Aneks C3
Solidność: Aneksy C3 - C6
Moment dokręcania: Aneksy B3, B5
Minimalne odstępki osiowe i krawędziowe: Aneksy B3 - B7
Nośność charakterystyczna na ścinanie (nośności statyczne i quasi-statyczne):
Nośność do uszkodzenia stali: Aneksy C1, C2
Nośność do uszkodzenia wyważenia: Aneks C3
Nośność do zniszczenia krawędzi betonu: Aneks C3
Przemieszczenia pod obciążeniem krótko- i długoterminowym:
Przemieszczenia pod obciążeniem krótko- i długoterminowym: Aneksy C7, C8
Nośność charakterystyczna i przemieszczenia w warunkach sejsmicznych dla kategorii C1 i C2:
Nośność na wrywanie, zmiany, kategoria C1: NPD
Nośność na wrywanie, zmiany kategoria C2: NPD
Nośność na ścinanie, zmiany, kategoria C1: NPD
Nośność na ścinanie, zmiany, kategoria C2: NPD
Współczynnik szczeliny pierścieniowej: NPD
Higiena, zdrowie i środowisko (BWR 3)
Treść, emisja i / lub uwalnianie substancji niebezpiecznych: NPD
8. Odpowiednia dokumentacja techniczna lub specjalna -
dokumentacja techniczna:

Właściwości użytkowe określonego powyżej wyrobu są zgodne z zestawem deklarowanych właściwości użytkowych. Niniejsza deklaracja właściwości użytkowych wydana zostaje zgodnie z rozporządzeniem (UE) nr 305/2011 na wyłączną odpowiedzialność producenta określonego powyżej.

W imieniu producenta podpisał(-a):

Dr.-Ing. Oliver Gelbig, Dyrektor Zarządzający ds. Jednostek Biznesowych i Inżynierii
Tumlingen, 2022-02-01

Jürgen Grün, Dyrektor Zarządzający ds. Chemii i Jakości

Niniejsza Deklaracja Właściwości Użytkowych została przygotowana w różnych językach. W razie wątpliwości w interpretacji, wersja angielska jest zawsze miarodajna.
Załącznik zawiera dobrowolne i uzupełniające informacje w języku angielskim (neutralne językowo), a wykraczające poza wymagania prawne.

Specific Part

1 Technical description of the product

The fischer injection system FIS EB II is a bonded fastener consisting of a cartridge with injection mortar fischer FIS EB II and a steel element according to Annex A4.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C1 to C6, B3 to B6
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C1 to C3
Displacements under short-term and long-term loading	See Annex C7 to C8
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

fischer injection system FIS EB II

Intended use

Specifications part 1

Annex B 1

Appendix 8 / 26

Specifications of intended use part 2

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN1993-1-4:2006+A1:2015 corresponding to corrosion resistance classes to Annex A 5 Table 5.1.

Design:

- Fastenings are designed under the responsibility of an engineer experienced in fastenings and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e. g. position of the fastener relative to reinforcement or to supports, etc.).
- Fastenings are designed in accordance with:
EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Fastening depth should be marked and adhered to installation
- Overhead installation is allowed (necessary equipment see installation instruction)

Installation conditions:

Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled

- Materials, dimensions and mechanical properties according to Annex A 5, Table A5.1
- Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored
- Setting depth is marked

Spacing	s		according to Annex B 7						
Minimum spacing									
Uncracked / cracked concrete	s _{min}	[mm]	105	120	120	120	140	140	160
Edge distance	c		according to Annex B 7						
Required projecting area									
Uncracked concrete	A _{sp,req}	[1000	40,0	47,5	47,5	47,5	64,0	64,0	64,0
Cracked concrete		mm ²]	30,5	36,5	36,5	36,5	49,0	49,0	49,0

Splitting failure for minimum edge distance and spacing in dependence of the effective embedment depth h_{ef} .

For the calculation of minimum spacing and minimum edge distance of anchors in combination with different embedment depths and thicknesses of concrete members the following equation shall be fulfilled:

$$A_{sp,req} < A_{sp}$$

$A_{sp,req}$ = required projecting area

$A_{sp} = A_{sp,ef}$ = effective projecting area (according to Annex B 7)

fischer injection system FIS EB II

Intended use

Minimum spacing and edge distance for anchor rods, reinforcing bars and fischer rebar anchor

Annex B 6

Appendix 13 / 26

Table B7.1: Effective projecting area A_{sp} with concrete member thickness
 $h > h_{ef} + 1,5 \cdot c$ and $h \geq h_{min}$

Single fastener	$A_{sp} = (3 \cdot c) \cdot (h_{ef} + 1,5 \cdot c)$	[mm ²]	with $c \geq c_{min}$
Group of fastener with $s > 3 \cdot c$	$A_{sp} = (6 \cdot c) \cdot (h_{ef} + 1,5 \cdot c)$	[mm ²]	
Group of fastener with $s \leq 3 \cdot c$	$A_{sp} = (3 \cdot c + s) \cdot (h_{ef} + 1,5 \cdot c)$	[mm ²]	

Table B7.2: Effective projecting area A_{sp} with concrete member thickness
 $h \leq h_{ef} + 1,5 \cdot c$ and $h \geq h_{min}$

Single fastener	$A_{sp} = 3 \cdot c \cdot \text{existing } h$	[mm ²]	with $c \geq c_{min}$
Group of fastener with $s > 3 \cdot c$	$A_{sp} = 6 \cdot c \cdot \text{existing } h$	[mm ²]	
Group of fastener with $s \leq 3 \cdot c$	$A_{sp} = (3 \cdot c + s) \cdot \text{existing } h$	[mm ²]	with $c \geq c_{min}$ and $s \geq s_{min}$

Edge distance and axial spacing shall be rounded up to at least 5 mm

Appendix 15 / 26

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole. Nominal drill hole diameter d_0 and drill hole depth h_0 see Tables B3.1, B4.1, B5.1		
2		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18$ mm blow out the hole twice by hand		For $h_{ef} > 12d$ and / or $d_0 \geq 18$ mm blow out the hole twice with oil-free compressed air ($p \geq 6$ bar)
3		Brush the drill hole twice. For drill hole diameter $d_0 \geq 18$ mm and / or $h_{ef} > 12d$ use a power drill. For deep holes use an extension. Corresponding brushes see Table B8.1		
4		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18$ mm blow out the hole twice by hand		For $h_{ef} > 12d$ and / or $d_0 \geq 18$ mm blow out the hole twice with oil-free compressed air ($p \geq 6$ bar)

Preparing

5		Mark the setting depth of the steel element	
6		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)	
7		Place the cartridge into the dispenser	
8		Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey	

Go to Step 9

fischer injection system FIS EB II

Intended use

Installation instructions part 1

Annex B 9

Appendix 16 / 26

Installation instructions part 2

Injection of the mortar

9	 Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles	 The conditions for mortar injection without extension tube can be found in Table B8.2 For deeper drill holes, than those mentioned in Table B8.2, use a suiTable extension tube	 For overhead installation, deep holes ($h_0 > 250$ mm) or drill hole diameter ($d_0 \geq 30$ mm) use an injection-adapter
---	---	--	---

Installation of anchor rods

10		Only use clean and oil-free anchor elements. Push the anchor rod with the setting depth mark down to the bottom of the hole, turning it slightly while doing so. After inserting the anchor element, excess mortar must be emerged around the anchor element.
	 For overhead installations support the anchor rod with wedges (e. g. fischer centering wedges) or fischer overhead clips.	 For push through installation fill the annular gap with mortar
11	 Wait for the specified curing time t_{cure} see Table B8.3	12  Mounting the fixture max T_{inst} see Table B3.1
Option		After the minimum curing time is reached, the gap between anchor and fixture (annular clearance) may be filled with mortar via the fischer filling disc. Compressive strength ≥ 50 N/mm² (e.g. fischer injection mortars FIS EB II, FIS SB, FIS V Plus, FIS EM Plus) ATTENTION: Using fischer filling disk reduces t_{fix} (usable length of the anchor)

fischer injection system FIS EB II

Intended use

Installation instructions part 2

Annex B 10

Appendix 17 / 26

Installation instructions part 3

Installation reinforcing bars and fischer rebar anchor

9		Only use clean and oil-free reinforcing bars or fischer rebar anchor. Push the reinforcement bar or the fischer rebar anchor with the setting depth mark into the filled hole up to the setting depth mark. Recommendation: Rotation back and forth of the reinforcement bar or the fischer rebar anchor makes pushing easy	
		When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole.	
10		Wait for the specified curing time t_{cure} see Table B8.3	
11		Mounting the fixture $\max T_{inst}$ see Table B5.1
