

DEKLARACJA WŁAŚCIWOŚCI UŻYTKOWYCH

DoP 0321

dla fischer Strong Undercut Anchor FSU (Kotwy metalowe do stosowania w betonie)

PL

1. Niepowtarzalny kod identyfikacyjny typu wyrobu: **DoP 0321**
2. Zamierzone zastosowanie: **Mocowanie w betonie zarysowanym lub niezarysowanym, zobacz załącznik, w szczególności aneksy B1 - B5.**
3. Producent: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Niemcy**
4. Upoważniony przedstawiciel: **-**
5. System(-y) oceny i weryfikacji stałości właściwości użytkowych: **1**
6. Europejski dokument oceny: **EAD 330232-01-0601-v02, Edition 06/2023**
Europejska ocena techniczna: **ETA-22/0674; 2023-07-26**
Jednostka ds. oceny technicznej: **DIBt- Deutsches Institut für Bautechnik**
Jednostka lub jednostki notyfikowane: **2873 TU Darmstadt**

7. Deklarowane właściwości użytkowe:

Wytrzymałość mechaniczna i stabilność osadzenia (BWR 1)

Nośność charakterystyczna na wrywanie (nośności statyczne i quasi-statyczne) Metoda A:

Nośność do uszkodzenia stali: zobacz załącznik, w szczególności aneks C1

$E_s = 210\,000\text{ MPa}$

Nośność na wrywanie: zobacz załącznik, w szczególności aneks C1

Nośność do wyrwania stożka betonu: zobacz załącznik, w szczególności aneks C1

Solidność: zobacz załącznik, w szczególności aneks C1

Minimalne odstępki osiowe i krawędziowe: zobacz załącznik, w szczególności aneks C3

Odległość od krawędzi zapobiegająca pękaniu pod obciążeniem: zobacz załącznik, w szczególności aneks C1

Nośność charakterystyczna na ścinanie (nośności statyczne i quasi-statyczne), metoda A:

Nośność do uszkodzenia stali (obciążenie ścinające): zobacz załącznik, w szczególności aneks C2

Nośność do uszkodzenia wyważenia: zobacz załącznik, w szczególności aneks C2

Charakterystyczna wytrzymałość dla uproszczonego projektu:

Metoda B: NPD

Metoda C: NPD

Przesunięcia:

Przemieszczenia przy obciążeniu statycznym i quasi-statycznym: zobacz załącznik, w szczególności aneks C6

Nośność charakterystyczna i przemieszczenia w warunkach sejsmicznych dla kategorii C1 i C2:

Nośność na wrywanie, kategoria C1: zobacz załącznik, w szczególności aneks C5

Nośność na wrywanie, kategoria C2: zobacz załącznik, w szczególności aneksy C5, C6

Nośność na ścinanie, kategoria C1: zobacz załącznik, w szczególności aneks C5

Nośność na ścinanie, kategoria C2: zobacz załącznik, w szczególności aneksy C5, C6

Współczynnik sztywności pierścieniowej: zobacz załącznik, w szczególności aneks C5

Ochrona przeciwpożarowa (BWR 2)

Reakcja na ogień: Klasy (A1)

Odporność na działanie ognia:

Odporność ogniowa do zniszczenia stali (obciążenie rozciągające): zobacz załącznik, w szczególności aneks C4

Odporność ogniowa na wrywanie (obciążenie rozciągające): zobacz załącznik, w szczególności aneks C4

Odporność ogniowa na zniszczenie stali (obciążenie ścinające): zobacz załącznik, w szczególności aneks C4

Trwałość:

Trwałość: zobacz załącznik, w szczególności aneksy A2, B1

8. Odpowiednia dokumentacja techniczna lub specjalna dokumentacja techniczna: -

Właściwości użytkowe określonego powyżej wyrobu są zgodne z zestawem deklarowanych właściwości użytkowych. Niniejsza deklaracja właściwości użytkowych wydana zostaje zgodnie z rozporządzeniem (UE) nr 305/2011 na wyłączną odpowiedzialność producenta określonego powyżej.

W imieniu producenta podpisał(-a):

Specific Part

1 Technical description of the product

The fischer Strong Undercut Anchor is an anchor made of galvanized steel which is placed in a cylindrical hole and anchored by displacement-controlled, self-undercutted mechanical interlock. The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading), Method A	See Annex C 1 and C 3
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 2
Displacements	See Annex C 6
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 5 and C 6

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 4

3.3 Aspects of Durability

Essential characteristic	Performance
Durability	See Annex B 1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330232-01-0601-v02 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Specifications of intended use

Fastenings subject to:

Size	FSU			FSU-P			
	M10x100 /20	M12x125 /30	M12x125 /50	M10x100 /20	M12x125 /30	M12x125 /50	
Static and quasi-static loads	✓						
Cracked and uncracked concrete							
Seismic performance category							C1
							C2
Fire exposure							

Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206:2013+A2:2021
- Strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed in accordance with EN 1992-4:2018 and EOTA Technical Report TR 055:2018.
- For requirements to resistance to fire local spalling of the concrete cover must be avoided

Installation instructions

- Fastener installation carried out by appropriately qualified personnel according to the design drawings and under the supervision of the person responsible for technical matters on the site.
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener.
- Fastener installation in accordance with the manufacturer's specifications and drawings and using the appropriate tools (machine setting tool FSU-ST, stop drill bit FSU-SD).
- Drill hole created perpendicular (tolerance +/- 5°) to concrete surface.
- Cleaning the hole of drilling dust.
- Fastener installation ensuring complete expansion of the sleeve with checking that the coloured ring marking on the bolt is visible above the top edge of the anchor sleeve, therefore it is required using the setting tool FSU-ST, that is the appropriate depth ring marking of the setting tool at least flush with the concrete surface (pre-setting) respecting with the fixture surface (Push-through-setting).
- Fastener installation ensuring complete shear load capacity, after setting the gap between the top edge of the sleeve and the concrete surface (pre-setting) or with surface of the fixture (Push-through-setting) has to be in the specified range according to Annex B 2, Table B2.1.
- Positioning of the drill holes and the undercut without damaging the reinforcement.
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance, if the aborted drill hole is filled with high strength mortar and, if under shear or oblique tension load, it is not in the direction of load application.
- Application of the torque moment given in Annex B 2, Table B2.1 using a calibrated torque wrench.

		M10x100	M12x125	
Characteristic resistance steel failure without lever arm	$V_{Rk,s,fi}$	R30 [kN]	3,7	4,4
		R60	2,2	3,0
		R90	1,7	2,6
		R120	1,5	2,3
Characteristic bending resistance steel failure with lever arm	$M^0_{Rk,s,fi}$	R30 [Nm]	4,8	6,9
		R60	2,9	5,0
		R90	2,2	4,4
		R120	1,9	4,0

Concrete pryout failure according to EN 1992-4:2018

Table C4.3: Minimum spacings and minimum edge distances under fire exposure for tension and shear load

Size	FSU, FSU-P	
	All sizes	
Spacing	$s_{min,fi}$	$4 \cdot h_{ef}$
Edge distance	$c_{min,fi}$	$c_{min,fi} = 2 \cdot h_{ef}$, for fire exposure from more than one side $c_{min,fi} \geq 300$ mm

fischer Strong Undercut Anchor FSU

Performances
 Characteristic resistance under fire exposure
Annex C 4

Appendix 14 / 16

Table C5.1: Characteristic values of tension and shear resistance under seismic performance category C1

Size	FSU, FSU-P				
	M10x100		M12x125		
Factor for annular gap Without filling of annular gap α_{gap} [-]	0,5				
Steel failure					
Characteristic resistance tension load C1 $N_{Rk,s,C1}$ [kN]	44,2		65,9		
Pullout failure					
Characteristic resistance tension load in cracked concrete C1 $N_{Rk,p,C1}$ [kN]	30,0		40,0		
Steel failure without lever arm					
Characteristic resistance shear load C1 $V_{Rk,s,C1}$ [kN]	for t_{fix} [mm]	$10 \leq t_{fix} < 15$	$15 \leq t_{fix} \leq 20$	$12 \leq t_{fix} < 20$	$20 \leq t_{fix} \leq 50$
	$V_{Rk,s,C1}$ FSU	18,8		26,8	
	$V_{Rk,s,C1}$ FSU-P	46,3	48,7	60,5	67,7

Table C5.2: Characteristic values of tension and shear resistance under seismic performance category C2

Size	FSU, FSU-P				
	M10x100		M12x125		
Factor for annular gap Without filling of annular gap α_{gap} [-]	0,5				
Steel failure					
Characteristic resistance tension load C2 $N_{Rk,s,C2}$ [kN]	44,2		65,9		
Pullout failure					
Characteristic resistance tension load in cracked concrete C2 $N_{Rk,p,C2}$ [kN]	30,0		40,0		
Steel failure without lever arm					
Characteristic resistance shear load C2 $V_{Rk,s,C2}$ [kN]	for t_{fix} [mm]	$10 \leq t_{fix} < 15$	$15 \leq t_{fix} \leq 20$	$12 \leq t_{fix} < 20$	$20 \leq t_{fix} \leq 50$
	$V_{Rk,s,C2}$ FSU	20,1		24,5	
	$V_{Rk,s,C2}$ FSU-P	39,6	41,8	51,8	62,9

fischer Strong Undercut Anchor FSU

Performances
Characteristic resistance under seismic performance categories C1 and C2

Annex C 5

Appendix 15 / 16

Table C6.1: Displacements under static and quasi-static tension loads

Size			FSU, FSU-P	
			M10x100	M12x125
Tension load in cracked concrete C20/25	N	[kN]	22,1	32,1
Displacements	$\frac{\delta_{N0}}{\delta_{N\infty}}$	[mm]	1,1	1,3
			2,8	3,0
Tension load in uncracked concrete C20/25	N	[kN]	22,1	32,1
Displacements	$\frac{\delta_{N0}}{\delta_{N\infty}}$	[mm]	1,1	1,3
			2,3	2,3

Table C6.2: Displacements under static and quasi-static shear loads

Size			FSU, FSU-P	
			M10x100	M12x125
Shear load in cracked and uncracked concrete C20/25	V	[kN]	13,8	21,3
Displacements FSU	$\frac{\delta_{V0}}{\delta_{V\infty}}$	[mm]	5,4	6,7
			8,0	10,0
Shear load in cracked and uncracked concrete C20/25	V	[kN]	36,3	52,2
Displacements FSU-P	$\frac{\delta_{V0}}{\delta_{V\infty}}$	[mm]	5,9	7,2
			8,8	10,7

Table C6.3: Displacements under tension loads for seismic performance category C2

Size			FSU, FSU-P	
			M10x100	M12x125
Displacement	DLS	$\delta_{N,C2}$ [mm]	4,6	4,6
	ULS		11,4	10,4

Table C6.4: Displacements under shear loads for seismic performance category C2

Size			FSU, FSU-P	
			M10x100	M12x125
Displacement FSU	DLS	$\delta_{V,C2}$ [mm]	5,2	5,0
	ULS		7,3	6,7
Displacement FSU-P	DLS	$\delta_{V,C2}$ [mm]	4,8	5,0
	ULS		10,7	18,5

fischer Strong Undercut Anchor FSU

Performances
Displacement under tension and shear loads
