

**DECLARAÇÃO DE DESEMPENHO****DoP 0165**

para ancoragem fischer Superbond dynamic (Âncoras químicas para utilização em betão)

PT

1. Código de identificação único do produto-tipo:**DoP 0165**2. Utilização(ões) prevista(s):

Fixações pós-instalados para uso em betão sob carga cíclico de fadiga, ver anexos, especialmente anexos B1-B16.

3. Fabricante:

fischerwerke GmbH &amp; Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Alemanha

4. Representante autorizado:

-

5. Sistema(s) de avaliação e verificação da regularidade do desempenho (AVCP):

1

6. Documento de Avaliação Europeu:

EAD 330250-00-0601, previously referred as EAD 330250-01-0601

Avaliação Técnica Europeia:

ETA-19/0501; 2021-01-22

Organismo de Avaliação Técnica:

DIBt- Deutsches Institut für Bautechnik

Organismo(s) notificado(s):

2873 TU Darmstadt

7. Desempenho(s) declarado(s):

EAD 330250-00-0601, Tabela 2.5, Método de Avaliação C: Função linearizada

Resistência mecânica e estabilidade (BWR 1)

Resistência característica à fadiga do aço sob carga de tração: Anexos C1, C3, C4

Resistência característica à fadiga de rotura por cone de betão, por arranque, por fendilhação e explosão de betão (concrete blow out), sob carga de tração: Anexos C1, C3, C4

Resistência característica à fadiga de rotura por arranque ou rotura combinada arranque/cone de betão sob carga de tração: Anexos C1, C3, C4

Resistência característica à fadiga do aço sob carga da corte: Anexos C2-C4

Resistência característica à fadiga por rotura do bordo de betão sob carga de corte: Anexos C2-C4

Resistência característica à fadiga por rotura de destacamento do betão (pry-out) sob carga de corte: Anexos C2-C4

Resistência característica à fadiga do aço sob carga de tração e corte: Anexos C1-C4

Fator de transferência de carga para carga de tração e corte: Anexos C1-C4

8. Documentação Técnica Adequada e/ouDocumentação Técnica Específica:

-

O desempenho do produto identificado acima está em conformidade com o conjunto de desempenhos declarados. A presente declaração de desempenho é emitida, em conformidade com o Regulamento (UE) n.o 305/2011, sob a exclusiva responsabilidade do fabricante identificado acima.

Assinado por e em nome do fabricante por:

Dr. Oliver Geibig, Diretor Administrativo de Unidades de Negócios e Engenharia  
Tumlingen, 2021-01-29

Jürgen Grün, Diretor Administrativo de Química e Qualidade

Este DoP foi preparado em diferentes línguas. Em caso de litígio sobre a interpretação, a versão em inglês prevalecerá sempre.

O Anexo inclui informações voluntárias e complementares em inglês que excedem os requisitos legais (linguisticamente especificados).

## Specific Part

### 1 Technical description of the product

The fischer superbond dynamic is a bonded anchor consisting of a cartridge with injection mortar FIS SB or FIS SB High Speed or mortar capsule RSB, an anchor rod FIS A or RG M, a centering sleeve (only for push-through installation), a conical washer with bore, a hexagon nut with spherical contact surface and a locknut. Alternatively the hexagon nut with spherical contact surface can be replaced by a spherical disc with hexagon nut. For the sizes M20 and M24, the variant with centering sleeve, washer, hexagon nut and lock nut is available as an alternative for push-through installation.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The resin capsule is placed into the hole and the steel element is driven by machine with simultaneous hammering and turning. The anchor rod is anchored via the bond between steel element, chemical mortar and concrete.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
<b>Assessment method C: Linearized function</b>	
Characteristic steel fatigue resistance under tension loading	See Annex C1, C3 and C4
Characteristic concrete cone, pull-out, splitting and blow out fatigue resistance under tension loading	See Annex C1, C3 and C4
Characteristic pull-out or combined pull-out /concrete cone fatigue resistance under tension loading	See Annex C1, C3 and C4
Characteristic steel fatigue resistance under shear loading	See Annex C2, C3 and C4
Characteristic concrete edge fatigue resistance under shear loading	See Annex C2, C3 and C4
Characteristic concrete pry-out fatigue resistance under shear loading	See Annex C2, C3 and C4
Characteristic steel fatigue resistance under tension and shear	See Annex C1 to C4

Essential characteristic	Performance
Load transfer factor for tension and shear loading	See Annex C1 to C4

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with European Assessment Document No. 330250-01-0601, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

## Installation conditions

**fischer anchor rod FIS A or RG M with fischer injection system FIS SB**

**Pre-positioned installation with the necessary components** (annular gap filled with mortar)

Size: M12, M16, M20, M24

**Push through installation with the necessary components** (annular gap filled with mortar)

Size: M12, M16, M20, M24

**Push through installation with the necessary components** (annular gap filled with mortar)

Size: M20, M24

**fischer anchor rod RG M with fischer mortar capsule system RSB**

**Pre-positioned or push through installation with the necessary components** (annular gap filled with mortar)

Size: M12, M16, M20, M24

## Overview system components Part 1

### Mortar cartridge (shuttle cartridge) with sealing cap; Size: 390 ml, 585 ml, 1100 ml, 1500 ml

**Imprint:** fischer FIS SB, FIS SB High Speed, processing notes, shelf-life, piston travel scale (optional), curing times and processing times (depending on temperature), hazard code, size, volume

### Mortar cartridge (coaxial cartridge) with sealing cap; Size: 150 ml, 300 ml, 380 ml, 410 ml

**Imprint:** fischer FIS SB, FIS SB High Speed, processing notes, shelf-life, piston travel scale (optional), curing times and processing times (depending on temperature), hazard code, size, volume

### Mortar capsule

Size: 12 mini, 12, 16 mini, 16, 20, 20 E /24

### Static mixer FIS MR Plus for injection cartridges up to 410 ml

### Static mixer FIS UMR for injection cartridges from 585 ml

Injection adapter and extension tube Ø 9 for static mixer FIS MR Plus;  
Injection adapter and extension tube Ø 9 or Ø 15 for static mixer FIS UMR

## Specifications of intended use (part 3)

### Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibers of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc plated steel, stainless steel R).
- For all other conditions according to EN1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 4 table A4.1.

### Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages have to be designed in accordance with:
  - EN 1992-4:2018 or
  - EOTA Technical Report TR 061 "Design method for fasteners in concrete under fatigue cyclic loading", Edition August 2020
- Static and quasi static loading see ETA-12/0258:2020
- Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure
- Fastenings in stand-off installation or with a grout layer are not covered by this European Technical Assessment (ETA)

### Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to on installation
- If only tension loads are involved in the application, the annular gap does not need to be filled
- Overhead installation is allowed

# Installation instructions part 1; injection mortar system FIS SB

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1	 <p>Drill the hole. Nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> see <b>table B4.1</b></p>
2	 <p>Clean the drill hole: Blow out the drill hole twice, with oil free compressed air (<math>p \geq 6</math> bar)  In uncracked concrete the use of the manual blow-out pump ABG is possible (Installation parameters: <math>d_0 &lt; 18</math> mm and <math>h_{ef} &lt; 10d</math>)</p> <div style="text-align: right;">  </div>
3	 <p>Brush the drill hole twice. For deep holes use an extension. Corresponding brushes see <b>table B7.3</b></p>
4	 <p>Clean the drill hole: Blow out the drill hole twice, with oil free compressed air (<math>p \geq 6</math> bar)  In uncracked concrete the use of the manual blow-out pump ABG is possible (Installation parameters: <math>d_0 &lt; 18</math> mm and <math>h_{ef} &lt; 10d</math>)</p> <div style="text-align: right;">  </div>

Go to step 5 (Annex B 10)

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1	 <p>Check a suitable hollow drill (see <b>table B1.1</b>) for correct operation of the dust extraction</p>
2	 <p>Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.  Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> see <b>table B4.1</b></p>

Go to step 5 (Annex B 10)

fischer Superbond dynamic

## Intended use

Installation instructions part 1; injection mortar system FIS SB

## Annex B 9

## Installation instructions part 2; injection mortar system FIS SB

### Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6		 Place the cartridge into the dispenser
7		 Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Go to step 8 (pre-positioned installation Annex B 11 or push through installation Annex B 12)

fischer Superbond dynamic

#### Intended use

Installation instructions part 2; injection motar system FIS SB

Annex B 10

# Installation instructions part 3, injection mortar system FIS SB

## Pre-positioned installation

8		<p>Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles. For drill hole depth <math>\geq 150</math> mm use an extension tube. For overhead installation, deep holes <math>h_0 &gt; 250</math> mm use an injection adapter.</p>
9	 	<p>Only use clean and oil-free metal parts. Mark the setting depth of the anchor rod. Push the fischer anchor rod down to the bottom of the hole, turning it slightly while doing so.</p>
9	 	<p>After inserting the anchor rod, excess mortar must be emerged around the anchor element. If not, pull out the anchor element immediately and reinject mortar.</p>
10		<p>Wait for the specified curing time <math>t_{\text{cure}}</math> see <b>table B8.1</b></p>
11		<p>Attach the component and install the washer and nuts - without centering sleeve. Tighten the hexagon nut with torque wrench, <math>T_{\text{inst}}</math> see <b>table B4.1</b>. Tighten lock nut manually, then use wrench to give another quarter or half turn.</p>
12		<p>The gap between anchor and fixture (annular clearance) has to be filled with mortar (FIS SB or FIS SB High Speed) via the fillable conical washer. If only tension loads are involved in the application, the annular gap does not necessarily have to be filled.</p>

fischer Superbond dynamic

### Intended use

Installation instructions part 3; pre-positioned installation; injection mortar system FIS SB

Annex B 11

## Installation instructions part 4, injection mortar system FIS SB

### Push through installation

8	 or	<b>Pre-assemble the anchor!</b> (Position of the conical washer or washer = embedment depth + fixture thickness)
9		<p>Fill approximately 2/3 of the drill hole incl. fixture with mortar. Always begin from the bottom of the hole and avoid bubbles.</p> <p>For drill hole depth <math>\geq 150</math> mm use an extension tube. For overhead installation, deep holes <math>h_0 &gt; 250</math> mm use an injection adapter.</p>
10	 with conical washer:  with washer: 	<p>Only use clean and oil-free metal parts.</p> <p>Push the pre-assembled fischer anchor rod into the drill hole until the conical washer or washer is in full contact with the surface, turning it slightly while doing so.</p>
11		<p>After inserting the anchor rod with pre-assembled components, excess mortar must be emerged around the anchor element (minimum on one point of the conical washer or washer).</p> <p>If not, pull out the anchor element immediately and reinject mortar.</p>
12	 with conical washer:  with washer: 	<p>Wait for the specified curing time <math>t_{\text{cure}}</math> see <b>table B8.1</b></p> <p>Tighten the hexagon nut with torque wrench, <math>T_{\text{inst}}</math> see <b>table B4.1</b>.</p> <p>Tighten lock nut manually, then use wrench to give another quarter or half turn.</p>

fischer Superbond dynamic

#### Intended use

Installation instructions part 4; push through installation; injection mortar system FIS SB

**Annex B 12**

## Installation instructions part 5; resin capsule RSB

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		<p>Drill the hole. Nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> see <b>table B6.1</b></p>
2		<p>Clean the drill hole: Blow out the drill hole four times, with oil free compressed air (<math>p \geq 6</math> bar)  In uncracked concrete the use of the manual blow-out pump ABG is possible (Installation parameters: <math>d_0 &lt; 18</math> mm and <math>h_{ef} &lt; 10d</math>)</p> 

Go to step 6 (pre-positioned installation Annex B 15 or push through installation Annex B 16)

Drilling and cleaning the hole (hammer drilling with hollow drill bit)		
1		<p>Check a suitable hollow drill (see <b>table B2.1</b>) for correct operation of the dust extraction</p>
2		<p>Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.  Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> see <b>table B6.1</b></p>

Go to step 6 (pre-positioned installation Annex B 15 or push through installation Annex B 16)

fischer Superbond dynamic

**Intended use**

Installation instructions part 5; resin capsule RSB

**Annex B 13**

## Installation instructions part 6; resin capsule RSB

Drilling and cleaning the hole (wet drilling with diamond drill bit)

1		Drill the hole. Drill hole diameter $d_0$ and nominal drill hole depth $h_0$ see <b>table B6.1</b>		Break the drill core and remove it
2		Flush the drill hole, until clear water emerges from the drill hole.		
3		Blow out the drill hole twice, using oil-free compressed air ( $p > 6$ bar)		
4		Brush the drill hole twice using a power drill. Corresponding brushes see <b>table B7.3</b>		
5		Blow out the drill hole twice, using oil-free compressed air ( $p > 6$ bar)		

Go to step 6 (pre-positioned installation Annex B 15 or push through installation Annex B 16)

fischer Superbond dynamic

**Intended use**

Installation instructions part 6; resin capsule RSB

**Annex B 14**

Appendix 20 / 26

## Installation instructions part 7; resin capsule RSB

### Pre-positioned installation fischer anchor rod RG M

6		<p>Insert the resin capsule into the drill hole by hand. Suitable resin capsule RSB or RSB mini see <b>table B7.2</b>.</p>	 <p>Depending on the metal part, use a suitable setting tool / adapter</p>
7		<p>Only use clean and grease-free metal parts. Drive the fischer anchor rod RG M into the capsule using suitable adapter and hammer drill set on rotary hammer action. Stop when the metal part reaches the bottom of the hole and the correct embedment depth is reached.</p>	
8		<p>When the correct embedment depth is reached, excess mortar must emerge from the mouth of the drill hole. If not, the metal part must be pulled out directly and another resin capsule must be pushed into the drill hole. Setting process (Step 7) must be repeated</p>	
9		<p>Wait for the specified curing time <math>t_{\text{cure}}</math> see <b>table B8.1</b></p>	
10		<p>Attach the component and install the washer and nuts - without centering sleeve. Tighten the hexagon nut with torque wrench, <math>T_{\text{inst}}</math> see <b>table B6.1</b>. Tighten lock nut manually, then use wrench to give another quarter or half turn.</p>	
11		<p>The gap between anchor and fixture (annular clearance) has to be filled with mortar (FIS SB or FIS SB High Speed) via the fillable conical washer. If only tension loads are involved in the application, the annular gap does not necessarily have to be filled.</p>	

fischer Superbond dynamic

#### Intended use

Installation instructions part 7; resin capsule RSB, pre-positioned installation

Annex B 15

## Installation instructions part 8; resin capsule RSB

### Push through installation fischer anchor rod RG M

6		<p>Insert the resin capsule through the fixture into the drill hole by hand. Suitable resin capsule RSB or RSB mini see <b>table B7.2</b>.</p>	 <p>Depending on the metal part, use a suitable setting tool / adapter</p>
7		<p>Only use clean and grease-free metal parts. Drive the fischer anchor rod RG M into the capsule using suitable adapter and hammer drill set on rotary hammer action. Stop when the metal part reaches the bottom of the hole and the correct embedment depth is reached.</p>	
8		<p>When the correct embedment depth is reached, excess mortar must be visible in the mounting part. If not, the metal part must be pulled out directly and another resin capsule must be pushed into the drill hole. Setting process (Step 7) must be repeated</p>	
9		<p>Wait for the specified curing time <math>t_{\text{cure}}</math> see <b>table B8.1</b></p>	
10		<p>Install the washer and nuts - without centering sleeve. Tighten the hexagon nut with torque wrench, <math>T_{\text{inst}}</math> see <b>table B6.1</b>. Tighten lock nut manually, then use wrench to give another quarter or half turn.</p>	
11		<p>The gap between anchor and fixture (annular clearance) has to be filled with mortar (FIS SB or FIS SB High Speed) via the fillable conical washer. If only tension loads are involved in the application, the annular gap does not necessarily have to be filled.</p>
