

## VYHLÁSENIE O PARAMETROCH

### DoP 0353

pre vysokovýkonnú chemickú kotvu fischer Highbond-Anchor FHB / FHB dyn / FDA (lepená expanzná kotva pre použitie v betóne)

SK

1. Jedinečný identifikačný kód typu výrobku:

DoP 0353

2. Zamýšľané použitie/použitia:

Dodatočné upevnenie v betóne s trhlinami alebo v betóne bez trhlín, pozri prílohu, najmä prílohy B1 - B19.

3. Výrobca:

fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Nemecko

4. Splnomocnený zástupca:

-

5. Systém(-y) posudzovania a overovania nemennosti parametrov:

1

6. Európsky hodnotiaci dokument:

EAD 330499-02-0601, Edition 12/2023

Európske technické posúdenie:

Orgán technického posudzovania:

Notifikovaný(-é) subjekt(-y):

DIBt- Deutsches Institut für Bautechnik

2873 TU Darmstadt

7. Deklarované parametre:

#### Mechanická odolnosť a stabilita (BWR 1)

##### Charakteristická odolnosť v ľahu (statické a kvázistatické zaťaženie):

- 1) Odolnosť voči porušeniu ocele: pozri prílohu, najmä prílohe C1
- 2) Odolnosť voči porušeniu vytiahnutím: pozri prílohu, najmä prílohy C2,C3
- 3) Odolnosť voči porušeniu betónového kužeľa: pozri prílohu, najmä prílohe C2
- 4) Vzdialenosť od okraja voči rozštiepliu pri zaťažení: pozri prílohu, najmä prílohe C2
- 5) Robustnosť: pozri prílohu, najmä prílohy C2, C3
- 6) Utáhovací moment: pozri prílohu, najmä prílohy B5-B8
- 7) Minimálna vzdialenosť od okraj a osová vzdialenosť, Hrubka základného materiálu: pozri prílohu, najmä prílohy B5-B8

##### Charakteristická odolnosť v šmyku (statické a kvázistatické zaťaženie):

- 8) Odolnosť voči porušeniu ocele: pozri prílohu, najmä prílohe C1
- 9) Odolnosť voči vylomeniu: pozri prílohu, najmä prílohe C2
- 10) Odolnosť voči poškodeniu hrany betónu: pozri prílohu, najmä prílohe C2

##### Posuny pri krátkodobom a dlhodobom zaťažení:

- 11) Posuny pri krátkodobom a dlhodobom zaťažení: pozri prílohu, najmä prílohe C4
- 12) Odolnosť betónu vystuženého oceľovými vláknami: pozri prílohu, najmä prílohy B3, B4, C1-C4

##### Charakteristická odolnosť a posuny pre seismické výkonnostné kategórie C1 a C2:

- 13) Odolnosť pri zaťažení ľahom, kategória C1: NPD
- 14) Odolnosť pri zaťažení ľahom, kategória C2: NPD
- 15) Odolnosť pri zaťažení šmykom, kategória C1: NPD
- 16) Odolnosť pri zaťažení šmykom, kategória C2: NPD

##### Bezpečnosť v prípade požiaru (BWR 2)

- 17) Reakcia na ohreň: Trieda (A1)

##### Odolnosť proti ohňu:

- 18) Požiarna odolnosť voči porušeniu ocele (Zaťaženie ľahom): NPD
- 19) Odolnosť spoja v podmienkach požiaru: NPD
- 20) Požiarna odolnosť voči porušeniu ocele (Zaťaženie šmykom): NPD

##### Hygiena, zdravie a životné prostredie (BWR 3)

- 21) Obsah, emisie a / alebo uvoľňovanie nebezpečných látok: NPD

8. Vhodná technická dokumentácia a/alebo špecifická technická dokumentácia: -

Uvedené parametre výrobku sú v zhode so súborom deklarovaných parametrov. Toto vyhlásenie o parametroch sa v súlade s nariadením (EÚ) č. 305/2011 vydáva na výhradnú zodpovednosť uvedeného výrobcu.

Podpísal(-a) za a v mene výrobcu:

Dr.-Ing. Oliver Geibig, konateľ oddelenia Produkt management & vývoj  
Tumlingen, 2024-02-23

Jürgen Grün, konateľ oddelenia Chemická výroba & kvalita

Toto vyhlásenie o vlastnostiach bolo vyhotovené v rôznych jazykoch. V prípade, že dojde k rozdielnomu výkladu má anglická verzia vždy prednosť.  
Príloha obsahuje dobrovoľné a dopĺňujúce informácie v anglickom jazyku. Tieto vychádzajú zo zákonom stanovených požiadaviek (jazykovo neutrálnych).

## **Specific Part**

### **1 Technical description of the product**

The fischer Highbond-Anchor FHB / FHB dyn / FDA is a bonded expansion fastener consisting of an injection cartridge FIS HB and a steel element. The steel element is made of zinc plated or stainless steel.

The load transfer is realized by mechanical interlock of several cones in the bonding mortar and a combination of bonding and friction forces in the concrete.

The product description is given in Annex A.

### **2 Specification of the intended use in accordance with the applicable European Assessment Document**

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### **3 Performance of the product and references to the methods used for its assessment**

#### **3.1 Mechanical resistance and stability (BWR 1)**

<b>Essential characteristic</b>	<b>Performance</b>
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C1 to C3, B5 to B8
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C1 and C2
Displacements under short-term and long-term loading	See Annex C4
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

#### **3.2 Safety in case of fire (BWR 2)**

<b>Essential characteristic</b>	<b>Performance</b>
Reaction to fire	Class A1

#### **3.3 Hygiene, health and the environment (BWR 3)**

<b>Essential characteristic</b>	<b>Performance</b>
Content, emission and/or release of dangerous substances	No performance assessed

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

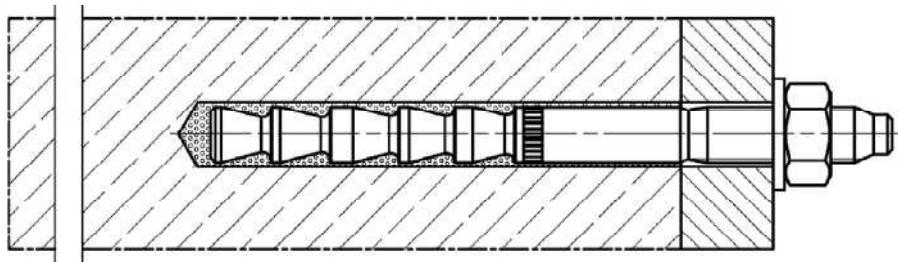

In accordance with the European Assessment Document EAD 330499-02-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

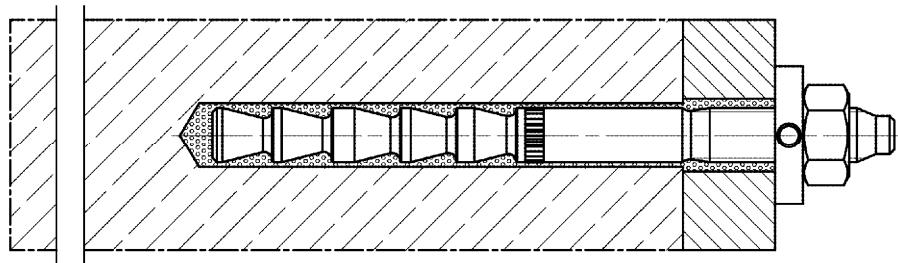

## Installation conditions part 1, FHB / FHB N

fischer Highbond-Anchor FHB / FHB N with fischer injection system FIS HB

### Pre-positioned installation

**Pre-positioned or push through installation** with subsequently injected fischer filling disc  
(annular gap filled with mortar)

fischer Highbond-Anchor FHB / FHB dyn / FDA					
Intended use Specifications (part 3), FDA		Annex B3 Appendix 18 / 38			

## Specifications of intended use (part 4)

### Base materials:

- Compacted reinforced or unreinforced normal weight concrete of strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021.
- For steel fibre reinforced concrete according to EN 206:2013+A2:2021 with steel fibers in accordance to EN 14889-1:2006, clause 5, group I. The maximum content of steel fibres is 80 kg/m<sup>3</sup>.

### Use conditions (Environmental conditions):

- Fastener intended for use in structures subject to dry internal conditions (all materials).
- For all other conditions according to EN 1993-1-4: 2006 + A1:2015 corresponding to corrosion resistance classes to Annex A11 table A11.1 (FHB / FHB N) or Annex A12 table A12.1 (FHB dyn).

### Design:

- Fastenings have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.)
- Fastenings are designed in accordance with:
  - EN 1992-4:2018 and
  - EOTA Technical Report TR 055, Edition February 2018.
- Fastenings in steel fibre reinforced concrete can be designed according to EN 1992-4:2018. The performance for normal weight concrete of strength classes C20/25 to C50/60 without fibres applies.

### Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Overhead installation is allowed. (necessary equipment see installation instruction).

Appendix 25 / 38

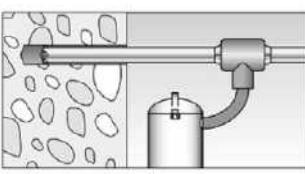

# Installation instructions part 1; Drilling and cleaning FHB, FHB N, FHB dyn and FDA

## Drilling and cleaning the drill hole (hammer drilling with standard drill bit)

1a		Drill the hole. Nominal drill hole diameter $d_0$ and drill hole depth $h_0$ see tables: FHB / FHB N → <b>Table B5.1</b> FHB dyn → <b>Table B6.1</b> FDA → <b>Table B8.1</b>
2a		Clean the drill hole. Blow out the drill hole twice  For drill hole diameter $d_0 < 24 \text{ mm}$ and drill hole depth $h_0 < 10d$ blow out the hole by hand or oil-free compressed air ( $\geq 6 \text{ bar}$ ).  For drill hole diameter $d_0 \geq 24 \text{ mm}$ or drill hole depth $h_0 \geq 10d$ blow out the hole with oil-free compressed air ( $\geq 6 \text{ bar}$ ).  Use a cleaning nozzle.
3a		Brush the drill hole twice with steel brush. Corresponding brushes see <b>Table B9.1</b>
4a		Clean the drill hole. Blow out the drill hole twice  For drill hole diameter $d_0 < 24 \text{ mm}$ and drill hole depth $h_0 < 10d$ blow out the hole by hand or oil-free compressed air ( $\geq 6 \text{ bar}$ ).  For drill hole diameter $d_0 \geq 24 \text{ mm}$ or drill hole depth $h_0 \geq 10d$ blow out the hole with oil-free compressed air ( $\geq 6 \text{ bar}$ ).  Use a cleaning nozzle.

Go to step 5a (Annex B13)

## Drilling and cleaning the drill hole (hammer drilling with hollow drill bit)

1b		Check a suitable hollow drill (see <b>Table B1.1, B2.1 resp. B3.1</b> ) for correct operation of the dust extraction
2b		Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.  Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power.  Nominal drill hole diameter $d_0$ and drill hole depth $h_0$ see tables: FHB / FHB N → <b>Table B5.1</b> FHB dyn → <b>Table B6.1</b> FDA → <b>Table B8.1</b>

Go to step 5a (Annex B13)

fischer Highbond-Anchor FHB / FHB dyn / FDA

### Intended use

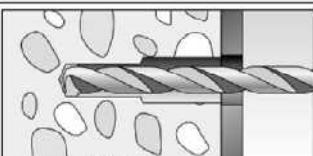

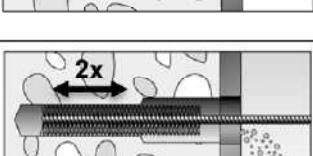

Installation instructions part 1

Drilling and cleaning the drill hole FHB, FHB N, FHB dyn and FDA

### Annex B11

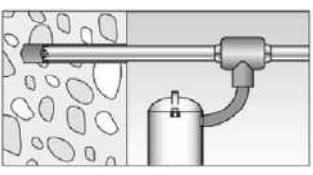

## Installation instructions part 2; Drilling and cleaning FHB dyn V

### Drilling and cleaning the hole (hammer drilling with standard drill bit)

1c	 <p>Drill hole 1 of the stepped borehole. Nominal drill hole diameter <math>d_1</math> and drill hole depth <math>h_1</math> see <b>Table B7.1</b></p>
2c	 <p>Drill hole 2 of the stepped borehole. Nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> see <b>Table B7.1</b></p>
3c	 <p>Clean the drill hole. Blow out the drill hole twice by hand or oil-free compressed air (<math>\geq 6</math> bar).</p> 
4c	 <p>Clean the drill hole. Blow out the drill hole twice by hand or oil-free compressed air (<math>\geq 6</math> bar).</p> 

Go to step 5a (Annex B13)

### Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1d	 <p>Check a suitable hollow drill (see <b>Table B2.1</b>) for correct operation of the dust extraction.</p>
2d	 <p>Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data.  Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power.  First drill hole 1 of the stepped borehole with nominal drill hole diameter <math>d_1</math> and drill hole depth <math>h_1</math> (see <b>Table B7.1</b>).  Then drill hole 2 of the stepped borehole with nominal drill hole diameter <math>d_0</math> and drill hole depth <math>h_0</math> (see <b>Table B7.1</b>).</p>

Go to step 5a (Annex B13)

fischer Highbond-Anchor FHB / FHB dyn / FDA

#### Intended use

Installation instructions part 2

Drilling and cleaning the drill hole FHB dyn V

#### Annex B12

## Installation instructions part 3; injection mortar system FIS HB

### Preparing the cartridge

5a		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6a		Place the cartridge into the dispenser
7a		Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

- Go to step:
- 8a: FHB / FHB N - Pre-positioned installation see Annex B14
  - 8b: FHB / FHB N - Push through installation see Annex B15
  - 8c: FHB dyn - Pre-positioned installation see Annex B16
  - 8d: FHB dyn - Push through installation see Annex B17
  - 8e: FHB dyn V - Push through installation see Annex B18
  - 8f: FDA - Push through installation see Annex B19

fischer Highbond-Anchor FHB / FHB dyn / FDA

### Intended use

Installation instructions part 3

Preparing the cartridge

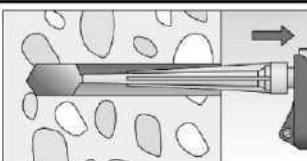

**Annex B13**

Appendix 28 / 38

## Installation instructions part 4; Pre-positioned installation FHB / FHB N

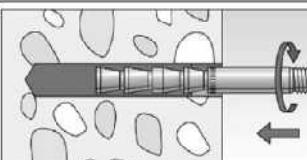

### Pre-positioned installation FHB / FHB N

8a

Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles. For drill hole depth  $h_0 \geq 150$  mm use an extension tube. For overhead installation or deep holes ( $h_0 > 250$  mm) use an injection adapter.

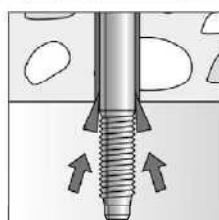

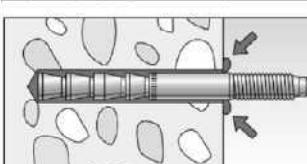

9a

Push the anchor rod down to the bottom of the hole, turning it slightly while doing so. Only use clean and oil-free metal parts.

After inserting the anchor rod, excess mortar must be emerged around the anchor element.

If not, pull out the anchor rod immediately and reinject mortar.

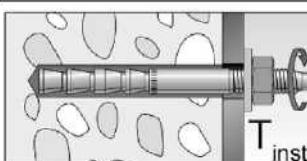

For overhead installations support the anchor rod with wedges.  
(e.g. fischer centering wedges).

10a

Wait for the specified curing time  $t_{\text{cure}}$   
see **Table B9.2**.

11a

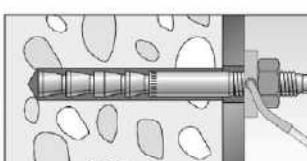

Attach the fixture and install the washer and hexagon nut.

Ensure the correct position of the metal parts.

Tighten the hexagon nut with installation torque  $T_{\text{inst}}$  (see **Table B5.1**).

12a  
Option

The gap between metal parts and fixture (annular gap) may be filled with mortar (FIS HB) via the fischer filling disc.

ATTENTION: Using fischer filling disc reduces  $t_{\text{fix}}$  (usable length of the anchor)

fischer Highbond-Anchor FHB / FHB dyn / FDA

Intended use

## Installation instructions part 6; Pre-positioned installation FHB dyn

### Pre-positioned installation FHB dyn

8c		Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles. For drill hole depth $h_0 \geq 150$ mm use an extension tube. For overhead installation or deep holes ( $h_0 > 250$ mm) use an injection adapter.
9c	 	Push the anchor rod down to the bottom of the hole, turning it slightly while doing so. Observe projection length $h_p$ (see <b>Table B6.1</b> ) Only use clean and oil-free metal parts.
10c		After inserting the anchor rod, excess mortar must be emerged around the anchor element. If not, pull out the anchor rod immediately and reinject mortar.
11c		For overhead installations support the anchor rod with wedges. (e.g. fischer centering wedges)
12c		Wait for the specified curing time $t_{\text{cure}}$ see <b>Table B9.2</b>
11c		Attach the fixture and install the fischer filling disc, the spherical washer and nuts ( <b>without centering sleeve</b> ). Ensure the correct position of the metal parts. Tighten the hexagon nut with installation torque $T_{\text{inst}}$ (see <b>Table B6.1</b> ). Tighten lock nut manually, then use wrench to give another quarter or half turn. In the high corrosion resistant steel version, the lock nut is a thin nut. Tighten it with a torque of $\frac{1}{4} T_{\text{inst}}$ .
12c		The gap between metal parts and fixture (annular gap) has to be filled with mortar (FIS HB) via the fischer filling disc. This installation step can be omitted for anchors with pure tension loading.

Pre-positioned installation FHB dyn

Annex B16

## Installation instructions part 7; Push through installation FHB dyn

### Push through installation FHB dyn

8d		<p>Fill approximately 2/3 of the drill hole incl. fixture with mortar. Always begin from the bottom of the hole and avoid bubbles. For drill hole depth <math>h_0 \geq 150</math> mm use an extension tube. For overhead installation or deep holes (<math>h_0 &gt; 250</math> mm) use an injection-adapter.</p>
9d	 	<p>Push the pre-assembled fischer anchor rod (with centering sleeve, fischer filling disc, spherical washer, hexagon nut and lock nut) into the drill hole until the fischer filling disc is in full contact with the surface, turning it slightly while doing so. Ensure the correct position of the metal parts and the centering sleeve. Only use clean and oil-free metal parts.</p> <p>After inserting the pre-assembled anchor rod, excess mortar must be emerged around the fischer filling disc (minimum on one point). If not, pull out the assembled anchor rod immediately and reinject mortar.</p>
10d		<p>Wait for the specified curing time <math>t_{\text{cure}}</math> see <b>Table B9.2</b>.</p>
11d		<p>Tighten the hexagon nut with installation torque <math>T_{\text{inst}}</math> (see <b>Table B6.1</b>). Tighten lock nut manually, then use wrench to give another quarter to half turn. In the high corrosion resistant steel version, the lock nut is a thin nut. Tighten it with a torque of <math>\frac{1}{4} T_{\text{inst}}</math>.</p>
