

VYHLÁSENIE O PARAMETROCH

DoP 0342

pre fischer chemický kotviaci systém FIS VL (Lepená kotva na použitie v betóne)

SK

1. Jedinečný identifikačný kód typu výrobku:

DoP 0342

2. Zamýšľané použitie/použitia:

Dodatočné upevnenie v betóne s trhlinami alebo v betóne bez trhlin, pozri prílohu,
najmä prílohy B1 - B9.

3. Výrobca:

fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Nemecko

4. Splnomocnený zástupca:

-

5. Systém(-y) posudzovania a overovania nemennosti
parametrov:

1

6. Európsky hodnotiaci dokument:

EAD 330499-01-0601, Edition 04/2020

Európske technické posúdenie:

ETA-10/0352; 2023-07-26

Orgán technického posudzovania:

DIBt- Deutsches Institut für Bautechnik

Notifikovaný(-é) subjekt(-y):

2873 TU Darmstadt

7. Deklarované parametre:

Mechanická odolnosť a stabilita (BWR 1)

Charakteristická odolnosť v tahu (statická a kvázistatické zaťaženie):

Odolnosť voči porušeniu ocele: Prílohy C1 - C3

Odolnosť voči kombinácii porušením vytiahnutím a porušením betónového kužeľa: Prílohy C4 - C6

Odolnosť voči porušeniu betónového kužeľa: Prílohe C4

Vzdialenosť od okraja voči rozstiepliu pri zaťažení: Prílohe C4

Robustnos: Prílohy C4 - C6

Maximálny utáhovací moment: Prílohy B3, B4

Minimálna vzdialenosť od okraj a osová vzdialenosť: Prílohy B3 - B5

Charakteristická odolnosť v šmyku (statická a kvázistatické zaťaženie):

Odolnosť voči porušeniu ocele: Prílohy C1 - C3

Odolnosť voči vylomeniu: Prílohe C4

Odolnosť voči poškodeniu hrany betónu: Prílohe C4

Posuny pri krátkodobom a dlhodobom zaťažení:

Posuny pri krátkodobom a dlhodobom zaťažení: Prílohy C7, C8

Charakteristická odolnosť a posuny pre seismické výkonnostné kategórie C1 a C2:

Odolnosť pri zaťažení ľahom, posuny, kategória C1: NPD

Odolnosť pri zaťažení ľahom, posuny, kategória C2: NPD

Odolnosť pri zaťažení šmykom, posuny, kategória C1: NPD

Odolnosť pri zaťažení šmykom, posuny, kategória C2: NPD

Faktor prstencovej medzery: NPD

Hygiéna, zdravie a životné prostredie (BWR 3)

Obsah, emisie a / alebo uvoľňovanie nebezpečných látok: NPD

8. Vhodná technická dokumentácia a/alebo špecifická
technická dokumentácia: -

Uvedené parametre výrobku sú v zhode so súborom deklarovaných parametrov. Toto vyhlásenie o parametroch sa v súlade s nariadením (EÚ) č. 305/2011 vydáva na výhradnú zodpovednosť uvedeného výrobcu.

Podpísal(-a) za a v mene výrobcu:

Dr.-Ing. Oliver Geibig, konateľ oddelenia Produkt management & vývoj
Tumlingen, 2023-08-15

Jürgen Grün, konateľ oddelenia Chemická výroba & kvalita

Toto vyhlásenie o vlastnostiach bolo vyhotovené v rôznych jazykoch. V prípade, že dôjde k rozdielnému výkladu má anglická verzia vždy prednosť.
Príloha obsahuje dobrovoľné a dopĺňujúce informácie v anglickom jazyku. Tieto vychádzajú zo zákonom stanovených požiadaviek (jazykovo neutrálnych).

Specific Part

1 Technical description of the product

The "fischer injection system FIS VL" is a bonded fastener consisting of a cartridge with injection mortar fischer FIS VL, fischer FIS VL High Speed or fischer FIS VL Low Speed and a steel element according to Annex A4.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex B 3 to B 5, C 1 to C 6
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 to C 4
Displacements under short-term and long-term loading	See Annex C 7 and C 8
Characteristic resistance and displacements for seismic performance categories C1 and C2	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

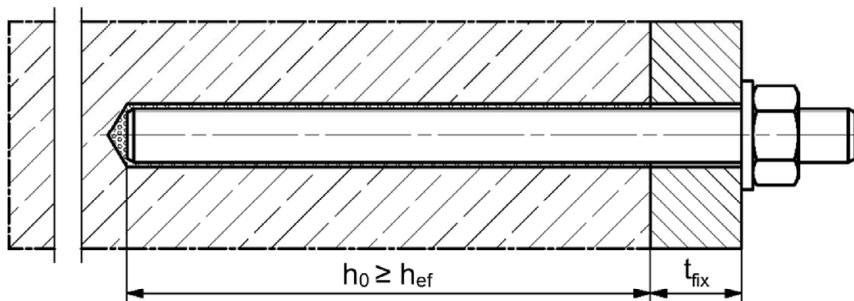

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

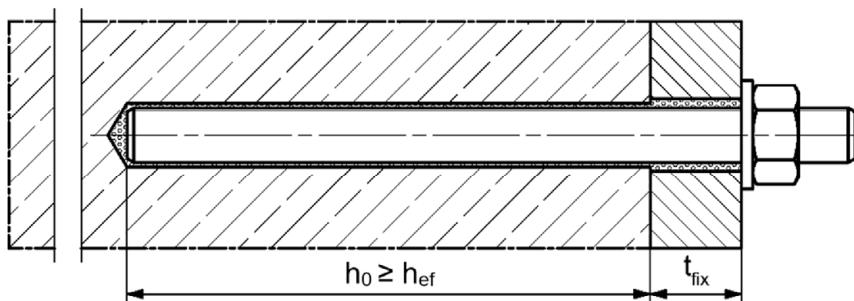

Installation conditions part 1

fischer anchor rod FIS A / RG and standard threaded rod

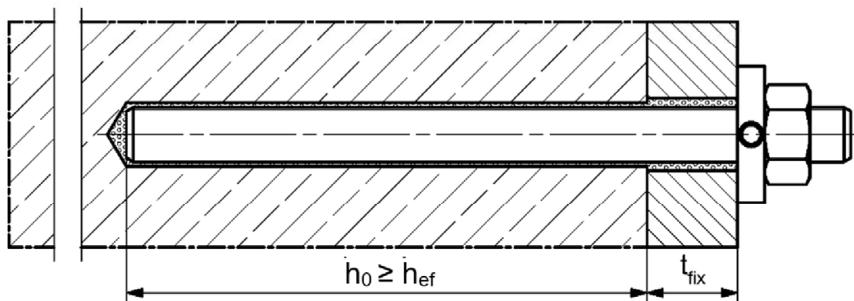

Pre-positioned installation

Push through installation (annular gap filled with mortar)

Pre-positioned or push through installation with subsequently injected fischer filling disc (annular gap filled with mortar)

Overview system components part 1

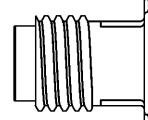

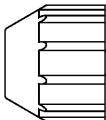

Injection cartridge (shuttle cartridge) with sealing cap; Sizes: 360 ml, 825 ml

Imprint: FIS VL, FIS VL Low Speed or FIS VL High Speed, processing notes, shelf-life, piston travel scale (optional), curing times and processing times (depending on temperature), hazard code, size, volume/weight

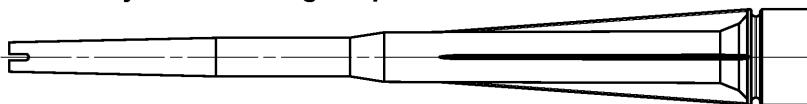

Injection cartridge (coaxial cartridge) with sealing cap; Sizes: 100 ml, 150 ml, 300 ml, 380 ml, 400 ml, 410 ml

Imprint: FIS VL, FIS VL Low Speed or FIS VL High Speed, processing notes, shelf-life, piston travel scale (optional), curing times and processing times (depending on temperature), hazard code, size, volume/weight

Static mixer FIS MR Plus for injection cartridges up to 410 ml

Static mixer FIS JMR for injection cartridges with 825 ml

Injection adapter and extension tube Ø 9 for static mixer FIS MR Plus; Injection adapter and extension tube Ø 9 or Ø 15 for static mixer FIS JMR

Cleaning brush BS

Blow-out pump AB G

Compressed-air cleaning tool ABP

fischer injection system FIS VL							Annex B 1 Appendix 8/24											
Intended use Specifications part 1																		

Specifications of intended use part 2

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN1993-1-4:2006+A1:2015 corresponding to corrosion resistance classes to Annex A 5 Table 5.1.

Design:

- Fastenings are designed under the responsibility of an engineer experienced in fastenings and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e. g. position of the fastener relative to reinforcement or to supports, etc.).
- Fastenings are designed in accordance with:
EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Fastening depth should be marked and adhered to installation
- Overhead installation is allowed (necessary equipment see installation instruction)

¹⁾ In wet concrete or water filled holes the curing times must be doubled²⁾ Minimal cartridge temperature +5°C

fischer injection system FIS VL

Intended use

Cleaning brush (steel brush)

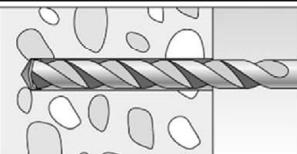

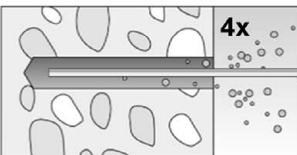

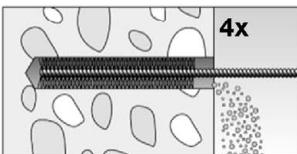

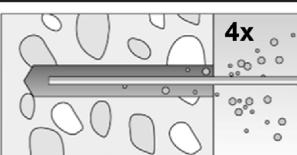

Processing time and curing time

Annex B 6

Appendix 13/ 24

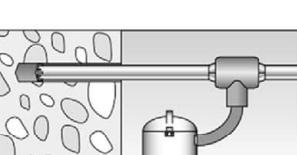

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables B3.1, B4.1, B5.1
2		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18 \text{ mm}$ blow out the hole four times by hand
3		Brush the drill hole four times. For drill hole diameter $\geq 30 \text{ mm}$ use a power drill. For deep holes use an extension. Corresponding brushes see table B6.1
4		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18 \text{ mm}$ blow out the hole four times by hand

Go to step 5

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

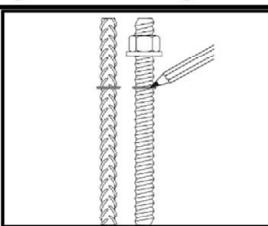

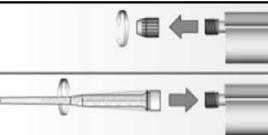

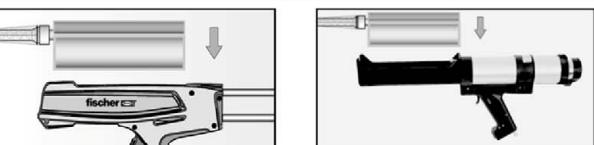

1		Check a suitable hollow drill (see table B1.1) for correct operation of the dust extraction
2		Use a suitable dust extraction system, e.g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data

Drill the hole with hollow drill bit. The dust extraction system has to extract the
drill dust nonstop during the drilling process and must be adjusted to
maximum power. Nominal drill hole diameter d_0 and drill hole depth h_0
see **tables B3.1, B4.1, B5.1**

	
---	--

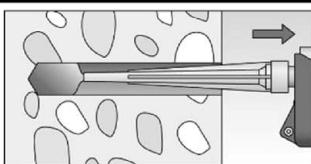

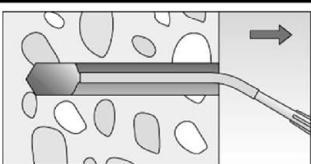

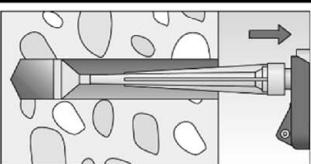

Installation instructions part 2

Preparing the cartridge

5		Mark the setting depth.
6		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
7		Place the cartridge into the dispenser
8		Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Go to step 9

Injection of the mortar

9	  	For $h_0 = h_{ef}$ fill approximately 2/3 of the drill hole with mortar. For $h_0 > h_{ef}$ more mortar is needed. Always begin from the bottom of the hole and avoid bubbles	For drill hole depth ≥ 150 mm use an extension tube	For overhead installation, deep holes ($h_0 > 250$ mm) use an injection adapter
---	--	---	--	--

Go to step 10

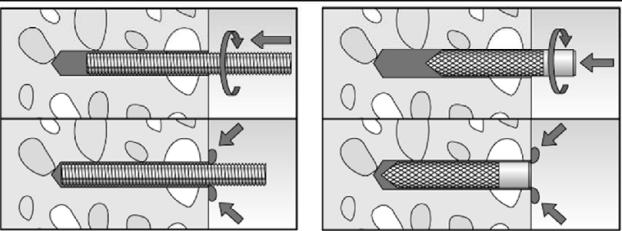

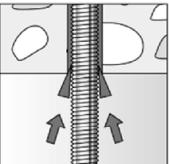

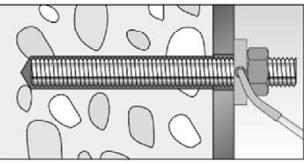

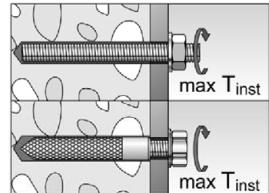

fischer injection system FIS VL

Intended use
Installation instructions part 2

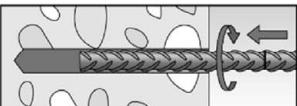

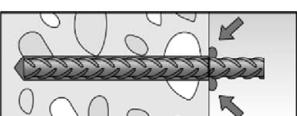

Annex B 8
Appendix 15/ 24

Installation instructions part 3

Installation of anchor rods or fischer internal threaded anchors RG M I

10		Only use clean and oil-free metal parts. Push the anchor rod or fischer internal threaded RG M I anchor down to the bottom of the hole, turning it slightly while doing so. After inserting the metal parts, excess mortar must be emerged around the anchor element.
		For overhead installations support the metal part with wedges (e.g. fischer centering wedges) or fischer overhead clips.
11		Wait for the specified curing time t_{cure} see table B6.2
Option		12  Mounting the fixture max T_{inst} see tables B3.1 and B4.1

Installation reinforcing bars

10		Only use clean and oil-free reinforcing bars. Push the reinforcement bar with the setting depth mark into the filled hole up to the setting depth mark. Recommendation: Rotation back and forth of the reinforcement bar or the fischer rebar anchor makes pushing easy
		When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole.
11		Wait for the specified curing time t_{cure} see table B6.2

fischer injection system FIS VL
