

IZJAVA O LASTNOSTIH

DoP 0217

za fischer sistem za vbrzganje Superbond (pritrjen pritrdilni element za uporabo v betonu)

SL

1. Enotna identifikacijska oznaka tipa proizvoda: DoP 0217
2. Predvidena uporaba: Za vgradnjo v razpokan in nerazpokan beton, Glej dodatek, zlasti priloge B1- B15.
3. Proizvajalec: fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Nemčija
4. Pooblaščen zastopnik: –
5. Sistemi ocenjevanja in preverjanja nespremenljivosti lastnosti: 1
6. Evropski ocenjevalni dokument: EAD 330499-01-0601
Evropska tehnična ocena: ETA-12/0258; 2020-06-17
Organ za tehnično ocenjevanje: DIBt- Deutsches Institut für Bautechnik
Priglašeni organi: 2873 TU Darmstadt
7. Navedene lastnosti:
Mehanska odpornost in stabilnost (BWR 1)
Karakteristična odpornost na napetostno obremenitev (statična in kvazistatična obremenitev):
Odpornost pri odpovedi jekla: Priloge C1- C3
Odpor na kombinirani izvlek in odpoved betonskega stožca: Priloge C4- C10
Odpornost na odpoved v betonski coni: Priloge C4
Razdalja od roba betona za preprečevanje loma pod obremenitvijo: Priloge C4
Robusnost: Priloge C4-C10, C15, C16
Največji zatezni navor: Priloge B4- B8
Najmanjša razdalja do roba betona in razmik: Priloge B4- B8
Karakteristična odpornost proti strižni obremenitvi (statična in kvazistatična obremenitev):
Odpornost na odpoved jekla: Priloge C1- C3
Odpornost na neuspešno odstranitev: Priloge C4
Odpornost na odpoved od roba betona: Priloge C4
Zamenjave pri kratkoročnem in dolgoročnem nalaganju:
Zamenjave pri kratkoročnem in dolgoročnem nalaganju: Priloge C11- C12
Karakteristična odpornost in premiki za kategoriji seizmičnih lastnosti C1 in C2:
Odpornost na napetost, premiki, kategorija C1: Priloge C13, C14, C15
Odpornost na napetost, premiki, kategorija C2: Priloge C13, C14, C16
Odpornost na strižno obremenitev, premiki, kategorija C1: Priloge C13, C14
Odpornost na strižno obremenitev, premiki, kategorija C2: Priloge C13, C14, C16
Faktor reže obroča: Priloge C13
Higiena, zdravje in okolje (BWR 3)
Vsečina, emisije in / ali sproščanje nevarnih snovi: NPDP
8. Ustrezna tehnična dokumentacija in/ali specifična tehnična dokumentacija: –

Lastnosti proizvoda, navedenega zgoraj, so v skladu z navedenimi lastnostmi. Za izdajo te izjave o lastnostih je v skladu z Uredbo (EU) št. 305/2011 odgovoren izključno proizvajalec, naveden zgoraj.

Podpisal za in v imenu proizvajalca:

Dr.-Ing. Oliver Gelbig, Generalni direktor poslovne enote in inženiringa
Tumlingen, 2021-04-01

Jürgen Grün, Generalni direktor za kemijo in kvaliteto

Ta izjava o lastnostih je bila pripravljena v različnih jezikih. V primeru nerazumevanja, se vedno upošteva angleška različica.

Priloga vsebuje informacije v angleškem jeziku, ki presegajo zakonske zahteve.

Specific Part

1 Technical description of the product

The injection system fischer Superbond is a bonded anchor for use in concrete consisting of a cartridge with injection mortar fischer FIS SB or a resin capsule fischer RSB and a steel element according to Annex A 5.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The resin capsule is placed into the hole and the steel element is driven by machine with simultaneous hammering and turning. The anchor rod is anchored via the bond between steel element, chemical mortar and concrete

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex B 4 to B 8, C 1 to C 10
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 to C 4
Displacements under short-term and long-term loading	See Annex C 11 and C 12
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 13 to C 16

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Installation conditions part 1

anchor rod or fischer anchor rod RG M with fischer injection system FIS SB

Pre-positioned installation

Push through installation (annular gap filled with mortar)

fischer Superbond					Annex B 2 Appendix 11/ 40
Intended use Specifications (part 2), fischer resin capsule system RSB					

Specifications of intended use (part 3)

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 7 table A7.1.

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed in accordance with:
EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to on installation
- Overhead installation is allowed

	h _{ef,max}		160	200		240		280		320	400	500	560	640
Minimum spacing and minimum edge distance	S _{min} = C _{min}		40	45		55		60		65	85	110	130	160
Minimum thickness of concrete member	h _{min}		h _{ef} + 30 (≥ 100)					h _{ef} + 2d ₀						

¹⁾ Both drill hole diameters can be used

Reinforcing bar

- The minimum value of related rib area $f_{R,min}$ must fulfil the requirements of EN 1992-1-1:2004+AC:2010
- The rib height must be within the range: $0,05 \cdot \phi \leq h_{rib} \leq 0,07 \cdot \phi$
(ϕ = Nominal diameter of the bar, h_{rib} = rib height)

Installation conditions:

Cleaning brush (steel brush)
Processing time and curing time

Annex B 10

Appendix 19/ 40

Installation instructions part 1; Injection mortar system FIS SB

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables B4.1, B6.1, B7.1, B8.1
2		Clean the drill hole: Blow out the drill hole twice, with oil free compressed air ($p \geq 6$ bar) In uncracked concrete the use of the manual blow-out pump ABG is possible (Installation parameters: $d_0 < 18$ mm and $h_{ef} < 10d$)
3		Brush the drill hole twice. For drill hole diameter ≥ 30 mm use a power drill. For deep holes use an extension. Corresponding brushes see table B10.1
4		Clean the drill hole: Blow out the drill hole twice, with oil free compressed air ($p \geq 6$ bar) In uncracked concrete the use of the manual blow-out pump ABG is possible (Installation parameters: $d_0 < 18$ mm and $h_{ef} < 10d$)

Go to step 5 (Annex B 12)

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see table B1.1) for correct operation of the dust extraction
2		Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data. Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables B4.1, B6.1, B7.1, B8.1

Go to step 5 (Annex B 12)

fischer Superbond

Intended use
Installation instructions part 1; injection mortar system FIS SB

Annex B 11

Appendix 20/ 40

Installation instructions part 2; injection mortar system FIS SB

Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6		 Place the cartridge into the dispenser
7		 Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Injection of the mortar

8	 Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles	 For drill hole depth ≥ 150 mm use an extension tube	 For overhead installation, deep holes ($h_0 > 250$ mm) or drill hole diameter ($d_0 \geq 40$ mm) use an injection-adapter
---	---	--	---

Go to step 9 (Annex B 13)

fischer Superbond

Intended use

Installation instructions part 2; injection mortar system FIS SB

Annex B 12

Appendix 21/ 40

Installation instructions part 3; injection mortar system FIS SB

Installation of anchor rods or fischer internal threaded anchors RG MI

9		Only use clean and oil-free metal part. Mark the setting depth of the metal part. Push the anchor rod or fischer internal threaded RG MI anchor down to the bottom of the hole, turning it slightly while doing so. After inserting the metal part, excess mortar must be emerged around the anchor element. If not, pull out the metal part immediately and reinject mortar.
	 For overhead installations support the metal part with wedges. (e. g. fischer centering wedges)	 For push through installation fill the annular gap with mortar
11	 Wait for the specified curing time t_{cure} see table B10.2	12  Mounting the fixture $\max T_{inst}$ see tables B4.1 and B6.1
Option		After the minimum curing time is reached, the gap between metal part and fixture (annular clearance) may be filled with mortar via the fischer filling disc. Compressive strength $\geq 50 \text{ N/mm}^2$ (e.g. fischer injection mortars FIS HB, FIS SB, FIS V, FIS EM Plus) ATTENTION: Using fischer filling disc reduces t_{fix} (usable length of the anchor)

Installation reinforcing bars and fischer rebar anchor FRA

10		Only use clean and oil-free reinforcing bars or fischer FRA. Mark the setting depth. Turn while using force to push the reinforcement bar or the fischer FRA into the filled hole up to the setting depth mark
		When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole. If not, pull out the anchor element immediately and reinject mortar.
11	 Wait for the specified curing time t_{cure} see table B10.2	12  Mounting the fixture $\max T_{inst}$ see table B8.1

fischer Superbond

Intended use

Installation instructions part 3; injection mortar system FIS SB

Annex B 13

Appendix 22/ 40

Installation instructions part 4; resin capsule RSB

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables B5.1 and B6.1
2		Clean the drill hole: Blow out the drill hole four times, with oil free compressed air ($p \geq 6$ bar) In uncracked concrete the use of the manual blow-out pump ABG is possible (Installation parameters: $d_0 < 18$ mm and $h_{ef} < 10d$)

Go to step 6 (Annex B 15)

Drilling and cleaning the hole (wet drilling with diamond drill bit)

1		Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see tables B5.1 and B6.1		Break the drill core and remove it
2		Flush the drill hole with clean water until it flows clear		
3		Blow out the drill hole twice, using oil-free compressed air ($p > 6$ bar)		
4		Brush the drill hole twice using a power drill. Corresponding brushes see table B10.1		
5		Blow out the drill hole twice, using oil-free compressed air ($p > 6$ bar)		

Go to step 6 (Annex B 15)

fischer Superbond

Intended use
Installation instructions part 4; resin capsule RSB

Annex B 14

Appendix 23/ 40

Installation instructions part 5; resin capsule RSB

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see table B2.1) for correct operation of the dust extraction
2		Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data. Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter d_0 and drill hole depth h_0 see tables B5.1 and B6.1

Go to step 6 (Annex B 15)

Installation fischer anchor rod RG M or fischer internal threaded anchor RG MI

6		Insert the resin capsule into the drill hole by hand. Suitable resin capsule RSB or RSB mini see table B9.2.		Depending on the metal part being installed, use a suitable setting tool
7			Only use clean and grease-free metal parts. Using a suitable adapter, drive the fischer anchor rod RG M or the fischer internal threaded anchor RG MI into the capsule using a hammer drill set on rotary hammer action. Stop when the metal parts reaches the bottom of the hole and is set to the correct embedment depth	
8		When reaching the correct embedment depth, excess mortar must emerge from the mouth of the drill hole. If not, the metal parts must be pulled out directly and a second resin capsule must be pushed into the drill hole. Setting process must be repeated (Step 7)		
9		Wait for the specified curing time, t_{cure} see table B10.2		
10			Mounting the fixture $\max T_{inst}$ see tables B5.1 and B6.1

			8.8		1,25
	Stainless steel R and high corrosion resistant steel HCR		50		2,38
			70		1,25 ²⁾ / 1,56
			80		1,33
	Reinforcing bar	B500B			1,50

¹⁾ In absence of other national regulations

²⁾ Only admissible for high corrosion resistant steel HCR, with $f_{yk} / f_{uk} \geq 0,8$ and $A_5 > 12\%$ (e.g. fischer anchor rods)

fischer Superbond

Performances

Characteristic values for steel failure under tension / shear load for reinforcing bars under seismic action (performance category C1); partial factors (performance category C1 / C2)

Annex C 14

Appendix 38/ 40

Table C15.1: Characteristic values for **combined pull-out** and concrete failure for **fischer anchor rods** and **standard threaded rods** in hammer drilled holes with **injection mortar FIS SB** or **resin capsule RSB** under seismic action performance category **C1**

Anchor rod / standard threaded rod				M8	M10	M12	M16	M20	M24	M27 ¹⁾	M30
Characteristic bond resistance, combined pullout and concrete cone failure											
Hammer-drilling with standard drill bit or hollow drill bit (dry or wet concrete; resin capsule RSB additional in water filled holes)											
Tem- perature range	I: 24 °C / 40 °C	$\tau_{Rk,C1}$	[N/mm ²]	4,6	5,0	5,6	5,6	5,6	5,6	5,6	6,4
	II: 50 °C / 80 °C			4,3	4,6	5,6	5,6	5,6	5,6	5,3	6,0
	III: 72 °C / 120 °C			3,9	4,3	4,9	4,9	4,9	4,9	4,5	5,1
	IV: 90 °C / 150 °C			3,6	3,9	4,5	4,5	4,5	4,5	4,1	4,7

Installation factors

Dry or wet concrete	γ_{inst}	[-]	1,0						
Water filled hole			1,2 ²⁾		1,0 ²⁾				

¹⁾ Only use with injection mortar FIS SB

²⁾ Only use with resin capsule RSB in water filled hole

Table C15.2: Characteristic values for **combined pull-out** and concrete failure for **reinforcing bars** in hammer drilled holes with **injection mortar FIS SB** under seismic action performance category **C1**

Nominal diameter of the bar		ϕ	8	10	12	14	16	20	25	28	32
Characteristic bond resistance, combined pullout and concrete cone failure											
Hammer-drilling with standard drill bit or hollow drill bit (dry or wet concrete)											
Tem- perature range	I: 24 °C / 40 °C	$\tau_{Rk,C1}$	[N/mm ²]	3,2	4,3	4,5	4,5	5,3	4,5	4,5	5,1
	II: 50 °C / 80 °C			3,2	3,9	4,1	4,1	4,9	4,5	4,5	5,1
	III: 72 °C / 120 °C			2,8	3,6	3,8	3,8	4,5	4,1	4,1	4,7
	IV: 90 °C / 150 °C			2,5	3,2	3,4	3,4	4,1	3,8	3,8	4,3

Installation factors

Dry or wet concrete	γ_{inst}	[-]	1,0							
---------------------	-----------------	-----	-----	--	--	--	--	--	--	--

fischer Superbond

Performances

Characteristic values for combined pull-out and concrete failure under seismic action (performance category C1) for fischer anchor rods, standard threaded rods and reinf. bars

Annex C 15

Appendix 39/ 40

Table C16.1: Characteristic values for **combined pull-out** and concrete failure for **fischer anchor rods** and **standard threaded rods** in hammer drilled holes with **injection mortar FIS SB** under seismic action performance category **C2**

Anchor rod / standard threaded rod		M12	M16	M20	M24	
Characteristic bond resistance, combined pullout and concrete cone failure						
Hammer-drilling with standard drill bit or hollow drill bit (dry or wet concrete)						
Temperature range	I: 24 °C / 40 °C	$\tau_{Rk,C2}$ [N/mm ²]	4,5	3,2	2,6	3,0
	II: 50 °C / 80 °C		4,5	3,2	2,6	3,0
	III: 72 °C / 120 °C		3,9	2,7	2,3	2,6
	IV: 90 °C / 150 °C		3,6	2,5	2,1	2,4
Installation factors						
Dry or wet concrete		γ_{inst}	[-]	1,0		
Displacement-Factors for tension load ¹⁾						
$\delta_{N,C2}$ (DLS)-Factor		[mm/(N/mm ²)]	0,09	0,10	0,11	0,12
$\delta_{N,C2}$ (ULS)-Factor			0,15	0,17	0,17	0,18
Displacement-Factors for shear load ²⁾						
$\delta_{V,C2}$ (DLS)-Factor		[mm/kN]	0,18	0,10	0,07	0,06
$\delta_{V,C2}$ (ULS)-Factor			0,25	0,14	0,11	0,09
1) Calculation of effective displacement: $\delta_{N,C2}$ (DLS) = $\delta_{N,C2}$ (DLS)-Factor · τ_{Ed} $\delta_{N,C2}$ (ULS) = $\delta_{N,C2}$ (ULS)-Factor · τ_{Ed} (τ_{Ed} : Design value of the applied tensile stress)			2) Calculation of effective displacement: $\delta_{V,C2}$ (DLS) = $\delta_{V,C2}$ (DLS)-Factor · V_{Ed} $\delta_{V,C2}$ (ULS) = $\delta_{V,C2}$ (ULS)-Factor · V_{Ed} (V_{Ed} : Design value of the applied shear force)
