

IZJAVA O LASTNOSTIH

št. 0072 – SL

1. Enotna identifikacijska oznaka tipa proizvoda: **Injekcijski sistem fischer FIS V**

2. Predvidena uporaba:

Produkt	Uporaba
povezovalno sidro za uporabo v beton	Za sidranje in/ali podpiranje nosilnih betonskih elementov ali težkih gradbenih elementov kot so obleke sten in spuščeni stropovi, glej prilogo B 1 - B 10

3. Proizvajalec: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Nemčija**

4. Pooblaščen zastopnik: --

5. Sistemi ocenjevanja in preverjanja nespremenljivosti lastnosti: **1**

6a. Harmonizirani standard: ---

Priglašeni organi: ---

6b. Evropski ocenjevalni dokument: **ETAG 001; 2013-04**

Evropska tehnična ocena: **ETA-02/0024; 2016-06-17**

Organ za tehnično ocenjevanje: **DIBt**

Priglašeni organi: **1343 – MPA Darmstadt**

7. Navedene lastnosti:

Mehanska odpornost in stabilnost (BWR 1)

Bistvena značilnost	zmogljivost
karakteristične vrednosti pod statičnimi in kvazi statičnimi vplivi meritev po TR 029 ali CEN/TS 1992-4:2009, Premiki	Glej prilogo C 1 - C 10

Ognjevarnost (BWR 2)

Bistvena značilnost	zmogljivost
Reakcija na ogenj	Zidni vložek izpolnjuje zahteve za razred A1
Ognjeodpornost	Ni določene zmogljivosti (NDZ)

8. Ustrezna tehnična dokumentacija in/ali specifična tehnična dokumentacija: ---

Lastnosti proizvoda, navedenega zgoraj, so v skladu z navedenimi lastnostmi. Za izdajo te izjave o lastnostih je v skladu z Uredbo (EU) št. 305/2011 odgovoren izključno proizvajalec, naveden zgoraj.

Podpisal za in v imenu proizvajalca:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

i.V. A. Bucher

i.V. W. Hengesbach

Tumlingen, 2016-06-24

- Ta izjava o lastnostih je bila pripravljena v različnih jezikih.. V primeru nerazumevanja, se vedno upošteva angleška različica..

- Priloga vsebuje informacije v angleškem jeziku, ki presegajo zakonske zahteve.

Specific Part

1 Technical description of the product

The injection system fischer FIS V is a bonded anchor consisting of a cartridge with injection mortar fischer FIS V and a steel element.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values under static and quasi-static action for design according to TR 029 or CEN/TS 1992-4:2009, Displacements	See Annex C 1 to C 10

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Intended Use

Specifications (part 1)

Annex B 1

Specifications of intended use (part 2)**Base materials:**

- Reinforced or unreinforced normal weight concrete according to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure, to permanently damp internal conditions or in other particular aggressive conditions (high corrosion resistant steel)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with EOTA Technical Report TR 029 "Design of bonded anchors" Edition September 2010 or CEN/TS 1992-4:2009

Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to on installation
- Overhead installation is allowed

fischer injection system FIS V

Anchor rod:

Marking (on random place) fischer anchor rod:

Property class 8.8, stainless steel, property class 80 or high corrosion resistant steel, property class 80: •
 Stainless steel A4, property class 50 and high corrosion resistant steel, property class 50: ••
 Or colour coding according to DIN 976-1

Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

- Materials, dimensions and mechanical properties according Annex A 3, Table A1
- Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored
- Setting depth is marked

fischer injection system FIS V

Intended Use

Cleaning tools
Processing times and curing times

Annex B 7

Installation instructions part 1**Drilling and cleaning the hole (hammer drilling with standard drill bit)**

1		Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Tables B2, B3, B4, B5
2		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18$ mm blow out the hole four times by hand
3		Brush the drill hole four times. For deep holes use an extension. Corresponding brushes see Table B6
4		Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18$ mm blow out the hole four times by hand

Go to step 5

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see Table B1) for correct operation of the dust extraction
2		Use a suitable dust extraction system, e.g. Bosch GAS 35 M AFC or a comparable dust extraction system with equivalent performance data Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process. Diameter of drill hole d_0 and drill hole depth h_0 see Tables B2, B3, B4, B5

Go to step 5

fischer injection system FIS V

Intended use
Installation instructions part 1**Annex B 8**

Installation instructions part 2

Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6		Place the cartridge into the dispenser
7		Extrude approximately 10 cm of material until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Go to step 8

Mörtelinjektion

8	 Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles	 For drill hole depth ≥ 150 mm use an extension tube	 For overhead installation, deep holes $h_0 > 250$ mm or drill hole diameter $d_0 \geq 40$ mm use an injection-adapter
---	--	---	--

Go to step 9

fischer injection system FIS V

Intended use

Installation instructions part 2

Annex B 9

Installation instructions part 3**Installation of anchor rods or fischer internal threaded anchors RG MI**

9		Only use clean and oil-free anchor elements. Mark the setting depth of the anchor. Push the threaded rod or fischer internal threaded RG MI anchor down to the bottom of the hole, turning it slightly while doing so. After inserting the anchor element, excess mortar must be emerged around the anchor element. If not, pull out the anchor element immediately and reinject mortar			
	 For overhead installations support the anchor rod with wedges. (e.g. fischer centering wedges)	 For push through installation fill the annular gap with mortar			
10	 Wait for the specified curing time t_{cure} see Table B7	<td data-bbox="861 840 941 1025">11</td> <td data-bbox="941 840 1260 1025">  </td> <td data-bbox="1260 840 1525 1025"> Mounting the fixture $T_{\text{inst,max}}$ see Tables B2 and B3 </td>	11		Mounting the fixture $T_{\text{inst,max}}$ see Tables B2 and B3

Installation reinforcing bars and fischer rebar anchor FRA

9		Only use clean and oil-free reinforcing bars or fischer FRA. Mark the setting depth. Turn while using force to push the reinforcement bar or the fischer FRA into the filled hole up to the setting depth mark			
		When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole. If not, pull out the anchor element immediately and reinject mortar			
10	 Wait for the specified curing time t_{cure} see Table B7	<td data-bbox="813 1456 893 1626">11</td> <td data-bbox="893 1456 1212 1626">  </td> <td data-bbox="1212 1456 1525 1626"> Mounting the fixture $T_{\text{inst,max}}$ see Table B5 </td>	11		Mounting the fixture $T_{\text{inst,max}}$ see Table B5
