7. Navedene lastnosti:

Mehanska odpornost in stabilnost (BWR 1)

Karakteristična odpornost na napetostno obremenitev (statična in kvazistatična obremenitev) Metoda A:
Odpornost pri odpovedi jekla: Priloge C1
Odpornost na izvlek: Priloge C1
Odpornost na odpoved v betonski coni: Priloge C1
Robusnost: Priloge C1
Najmanjša razdalja do roba betona in razmik: Priloge C4
Razdalja od roba betona za preprečevanje loma pod obremenitvijo: Priloge C1

Karakteristična odpornost proti strižni obremenitvi (statična in kvazistatična obremenitev):
Odpornost na odpoved jekla (strižna obremenitev): Priloge C1
Odpornost na neuspešno odstranitev: Priloge C1

Značilna odpornost za poenostavljeno osnovo:
Metoda B: NPD
Metoda C: NPD

Premiki:
Premiki pri statični in kvazistatični obremenitvi: Priloge C4

Karakteristična odpornost in premiki za kategoriji seizmičnih lastnosti C1 in C2:
Odpornost na napetost, premiki, kategorija C1: Priloge C2
Odpornost na napetost, premiki, kategorija C2: Priloge C2
Odpornost na strižno obremenitev, premiki, kategorija C1: Priloge C2
Odpornost na strižno obremenitev, premiki, kategorija C2: Priloge C2
Faktor reže obroča: Priloge C2

Varnost v primeru požara (BWR 2)
Odzivnost na ogenj: Razred (A1)

Odpornost proti ognju:
Požarna odpornost pri odpovedi jekla (napetostna obremenitev): Priloge C3
Požarna odpornost pri izvleku (napetostna obremenitev): Priloge C3
Požarna odpornost pri odpovedi jekla (strižna obremenitev): Priloge C3

II SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT

1 Technical description of product and intended use

Technical description of the product
fischer concrete screw UltraCut FBS II R is a concrete screw made of stainless steel. The anchor is installed in a drilled hole and anchored by mechanical interlock.

An illustration of the product is given in Annex A.

The characteristic material values, dimensions and tolerances of the anchors not indicated in Annexes shall correspond to the respective values laid down in the technical documentation of this European Technical Assessment.

The anchors are intended to be used with embedment depth given in Annex B, Table B2.1. The intended use specifications of the product are detailed in the Annex B1.

2 Specification of the intended use in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed intended working life of the anchor of 50 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Characteristics of product

Mechanical resistance and stability (BWR 1):
The essential characteristics are detailed in the Annex C1, C2 and C4.

Safety in case of fire (BWR 2):
The essential characteristics are detailed in the Annex C3.

Durability:
See annex B1.

Other Basic Requirements are not relevant.

3.2 Methods of assessment

The assessment of fitness of the anchor for the intended use in relation to the requirements for mechanical resistance and stability and safety in use in the sense of the Basic Works Requirement 1 has been made in accordance with EAD 330232-01-0601; Mechanical fasteners for use in concrete.

4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base.

4.1 AVCP system

According to the decision 1996/582/EC of the European Commission, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No. 305/2011) is 1.

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres (cracked or uncracked) according to EN 206:2013+A2:2021
- Strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021

Use conditions (Environmental conditions):

- Structures subjected to dry internal conditions (FBS II R)
- For all other conditions according to EN 1993-1-4:2006 + A1:2015, corresponding to corrosion resistance class
  - CRC III: for FBS II R

Design:

- The structural design according to EN 1992-4:2018 are conducted under responsibility of a designer expierenced in the field of anchorages and concrete works.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the screw relative to reinforcement or to supports, etc.).
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 055:2018

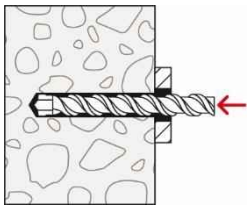
Installation parameters

Annex B 2

Appendix 7 / 14

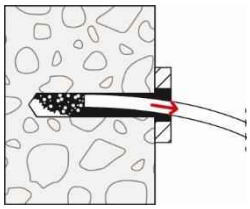
Installation instruction part 1 FBS II 8/10/12 R



Step 1: Drilling of the hole:

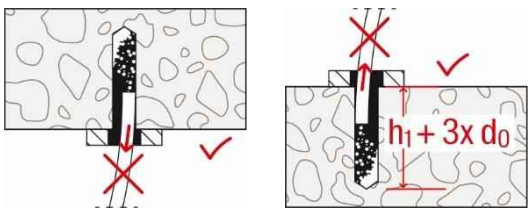
Drill the hole using hammer drill,
hollow drill or diamond core drill

Drill hole diameter d_0 and
drill hole depth h_1 according to table B2.1



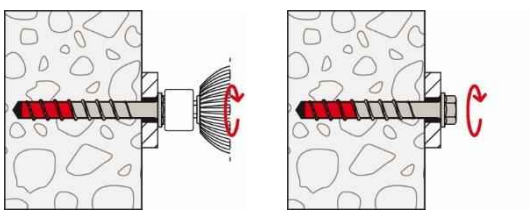
Step 2: Cleaning of the drill hole - horizontal:

Clean the drill hole. This step can be omitted in the preparation of the hole by using a hollow drill bit or diamond core drill. (recommendation: use the fischer FHD hollow drill bit)



Step 2: Cleaning of the drill hole - vertical:

Cleaning of the drill hole can be omitted, if drilling vertically upwards or if drilling vertically downwards and the hole depth has been increased. It is recommended to increase the drill hole depth by an additional 3 x drilling ø when drilling vertically downwards.

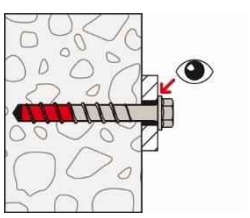


Step 3: Installation:

Turn in until the head is in contact with the fixture.

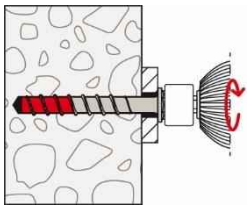
Installation with any torque impact screw driver up to the maximum mentioned torque moment ($T_{imp,max}$ according to table B2.1).

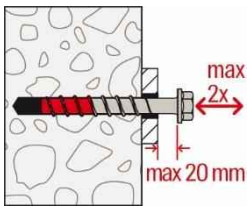
Alternatively, all other tools without an indicated torque moment are allowed (e.g. ratchet spanner). The indicated torque moments $T_{imp,max}$ for impact screw driver are not decisive for manual installation.

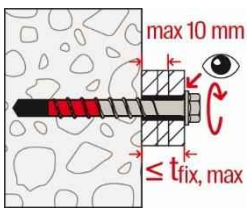


Step 4: Checking of the correct installation:

After installation a further turning of the screw must not be possible. The head of the screw must be in contact with the fixture and is not damaged

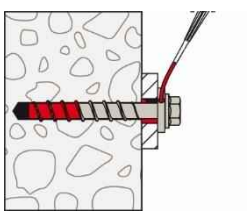






Adjustment

Optional:
It is permissible to adjust the screw twice.
Therefore, the screw may be untightened to a maximum of L_{adj} = 20 mm off the surface of the initial fixture. The total permissible thickness of shims added during the adjustment process
is t_{adj} = 10 mm.
The required nominal anchoring depth h_{nom} must be kept after the adjustment process. (see also annex B 3)



Filling of the annular gap

For seismic performance category C2 applications:
The gap between screw shaft and fixture must be filled with mortar; mortar compressive strength ≥ 50 N/mm²
(e. g. FIS V Plus, FIS HB, FIS SB or FIS EM Plus). As an aid for filling the gap, the filling disc FFD is recommended.

Installation instruction FBS II 6 R

	**Step 1: Drilling of the hole:** Drill the hole using hammer drill Drill hole diameter d_0 and drill hole depth h_1 according to table B2.1
	**Step 2: Cleaning of the drill hole:** Clean the drill hole.
	**Step 3: Installation:** Turn in until the head is in contact with the fixture. Installation with any torque impact screw driver up to the maximum mentioned torque moment ($T_{imp,max}$ according to table B2.1).
	**Step 4: Checking of the correct installation:** After installation a further turning of the screw must not be possible. The head of the screw must be in contact with the fixture and is not damaged
