

## PRESTANDEKLARATION

### DoP 0360

för fischers ZYKON-ankare FZP II T (for LAMINAM)

SV

- Produkttypens unika identifikationskod: DoP 0360
- Avsedd användning/avsedda användningar: Infästning för keramiskt fasadmaterial tillverkat av "LAMINAM" i enlighet med EN 14411:2016, se bilaga, särskilt bilagor B1 - B6.
- Tillverkare: fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Tyskland
- Tillverkarens representant: -
- System för bedömning och fortlöpande kontroll av prestanda: 2+
- Europeiskt bedömningsdokument: EAD 330030-00-0601, Edition 10/2018  
Europeisk teknisk bedömning: ETA-22/0669; 2023-09-22  
Tekniskt bedömningsorgan: DIBt- Deutsches Institut für Bautechnik  
Anmält/anmälda organ: 2873 TU Darmstadt
- Angiven prestanda:  
**Mekanisk hållfasthet och stabilitet (BWR 1)**  
Karakteristiskt motstånd mot utdrag under draglast: Bilaga C1  
Karakteristiskt motstånd mot utdrag under tvärlast: Bilaga C1  
Karakteristiskt motstånd mot utdrag under kombinerad drag- och tvärlast: Bilaga C1  
  
Kant- och inbördes avstånd: Bilaga C1  
Hållbarhet: Bilaga B1  
Karakteristiskt motstånd mot skador i stålet under drag- och tvärlast : Bilaga C1  
  
**Säkerhet vid brand (BWR 2)**  
Reaktion vid brand: Klass (A1)
- Lämplig teknisk dokumentation och/eller särskild teknisk dokumentation: -

Y=NPD; F<sub>Rk</sub>=NPD

Prestandan för ovanstående produkt överensstämmer med den angivna prestandan. Denna prestandadeklaration har utfärdats i enlighet med förordning (EU) nr 305/2011 på eget ansvar av den tillverkare som anges ovan.

Undertecknad på tillverkarens vägnar av:

Dr.-Ing. Oliver Geibig, Verkställande direktör affärsenheter och teknik  
Tumlingen, 2024-04-12

Jürgen Grün, Verkställande direktör kemi och kvalitet

Denna DoP har förberetts på olika språk. I händelse av tvist om tolkningen ska den engelska versionen alltid råda.

Bilagan innehåller frivilliga och kompletterande information på engelska som överskrider (det specifika språkets) lagkrav.

## Specific Part

### 1 Technical description of the product

The fischer-Zykon-panel anchor FZP II T is a special anchor of size M 6 which consists of a cone bolt with external thread, made of stainless steel, an expansion part made of stainless steel, a shim washer made of polyamide and, if need to be, a hexagon nut made of stainless steel or aluminium. The anchor is put into an undercut drill hole in the façade panels and is placed form-fit by driving-in the shim washer or by applying a torque moment to the hexagon nut.

The product description is given in Annex A. The material values, dimensions and tolerances of the components of the fastener not indicated in the annexes shall correspond to the values laid down in the technical documentation.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fasteners of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to breakout or pull-out failure under tension load	See Annex C 1
Characteristic resistance to breakout or pull-out failure under shear load	See Annex C 1
Characteristic resistance to breakout or pull-out failure under combined tension and shear load	See Annex C 1
Edge distance and spacing	See Annex C 1
Durability	Corrosion Resistance Class (CRC) III in accordance with EN 1993-1-4:2015
Characteristic resistance to steel failure under tension and shear loads	See Annex C 1

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with EAD No. 330030-00-0601 the applicable European legal act is: [97/161/EG].  
The system to be applied is: 2+

## Specifications of intended use

### Anchorage subject to:

- Static and quasi-static loads.

### Base materials:

- The Laminam façade panels shall be in accordance with EN 14411:2016 "Ceramic tiles – definition, classification, characteristics, assessment and verification of constancy of performance and marking".  
The Laminam façade panels have to meet the requirements of group BI<sub>a</sub> according to EN 14411:2016.
- The characteristic values of the façade panels correspond Table B1.

**Table B1: Characteristic values of façade panels** – geometrical and physical properties

Trade name		Laminam 12+	
Country of origin		Italy	
Maximum panel size	L x H or H x L	[mm]	1620 x 3240
Nominal panel thickness	$h_{nom} =$	[mm]	12,5
Panel thickness (minimum)	$h_{min} =$	[mm]	11,8
Panel thickness (maximum)	$h_{max} =$	[mm]	12,6
Minimum operating thickness of the stand-off mechanism		[mm]	10,5
Maximum operating thickness of the stand-off mechanism		[mm]	12,6
Dead load	$g_k =$	[Kg/m <sup>2</sup> ]	30
Density – dry <sup>1)</sup>	$\rho \geq$	[g/cm <sup>3</sup> ]	> 2,2
Modulus of elastic	$E_{mean} =$	[N/mm <sup>2</sup> ]	50.000
Poisson ratio	$\nu =$	[-]	0,21
Coefficient of thermal expansion	$\alpha_T =$	[10 <sup>-6</sup> K <sup>-1</sup> ]	6,6
Characteristic bending strength	$\sigma_{5\%} =$	[N/mm <sup>2</sup> ]	39,9

<sup>1)</sup> In absence of other national regulations

### Use condition:

- According to the corrosion resistance class (CRC) according to EN 1993-1-4:2015 (ETA Section 3.1)

**fischer Zykon Panel anchor FZP II T for "LAMINAM ceramic"**

Intended use  
Specifications

**Annex B 1**

Appendix 6 / 12

## Design:

- The design of anchorages under static and quasistatic load is carried out in accordance with the specifications of the façade panel manufacturer.
- The façade panels, their fixings as well as the substructure including its connection to wall brackets and their connection to the construction works are designed for the respective case of application under the responsibility of an engineer skilled in the field of façade construction.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.
- Each façade panel is fixed with at least four anchors in a rectangular arrangement via single clasps or panel support profiles on the substructure. For small panels or small fitted pieces, differential or fill- in pieces the number and position of the anchors shall be chosen constructively.
- Edge distance and spacing shall be observed. For small panels, differential and fitted pieces, the edge and axial spacing shall be chosen constructively.
- The substructure is constructed such that the façade panels are fixed technically strain-free via sliding points (loose bearings) and one fixed point (fixed bearing). The fixed point may be placed at the panel edge or in the panel field.
- Two fixing points of the façade panel are designed such that they are able to carry the dead load of the façade panel.
- When using clasps on horizontal support profiles, the horizontal fixing points of a facade panel at the same height must each be fixed to the same support profile.
- The permissible clasp torsion under service load is 2°.

## Installation:

- The drillings are done at the factory or on site under workshop conditions; when making drillings on site the execution is supervised by the responsible project supervisor or a skilled representative of the project supervisor.
- Making of the undercut drilling is done with a special drill bit or a special CNC drill bit according to Annex B 4 and a special drilling device in accordance with the information deposited with Deutsches Institut für Bautechnik (DIBt).
- The drilling residues are removed from the drill hole.
- In case of aborted hole: new drilling at a minimum distance, of 15 mm away from the aborted hole.
- The geometry of the drill hole is checked at least on 5 % of all drillings. Check also when using a new drill bit or the operator changes. The following dimensions shall be checked and documented according to manufacturer's information and testing instructions by means of a control aids according to Annex B 5, Figure B5, B6 and B7.
  - Diameter of the cylindrical drill hole.
  - Diameter of the undercut.
  - Remaining panel thickness (drill hole depth and panel thickness respectively).
- If the tolerance given in Annex B 4, Table B2 is exceeded, the geometry of the drill hole shall be checked on 25 % of the drillings performed. No further drill hole should exceed the tolerances otherwise all drill holes have to be controlled. Drill holes falling below or exceeding the tolerances shall be rejected.

Note: Checking the geometry of drill hole on 5 % of all drillings means that on one of 5 panels (this corresponds to 20 drillings for panels with 4 undercut anchors) one drilling shall be checked. If the tolerances given in Annex B 4, Table B2 are exceeded, the control shall be increased to 25 % of the drillings, i.e. one drilling shall be checked on all the 5 panels.

**fischer Zykon Panel anchor FZP II T for "LAMINAM ceramic"**

**Intended use**  
Specifications

**Annex B 2**

Appendix 7 / 12

- The anchors are installed in a deformation controlled manner. For this purpose suitable installation tools per Annex B 5, Figure B4 shall be used. The anchor is set correctly if, bolt projection "b" as per Annex A 2, Figure B4 or Annex B 6, Illustration 5.1 and 6 is observed. The dimension "b" is indicated in the anchor designation.
- During transport and storage on site the façade panels are protected from damages; the façade panels are not to be hung up jerkily (if need be lifters shall be used for hanging up the façade panels); façade panels and reveal panels respectively with incipient cracks are not be installed.
- The façade panels are arranged in a "reclined" or "upright" position.
- The façade are installed by skilled specialists and the laying instructions of the manufacturer shall be paid attention to.
- The façade panels must not be used for the transmission of impact loads and for the protection against falling.
- Overhead installation is allowed

## Drill hole geometry

Figure B2:

## Drill bits

Figure B3:

Examples:

Table B2: Drill hole dimensions [mm]

$\varnothing d_0$	$\varnothing d_1$	$h_r$ <sup>1)</sup>	n	$h_v$ <sup>2)</sup>	h
11,2 ± 0,2	13,5 ± 0,3	≥ 4,5	≈ 4	$h - h_r \geq 6$	≥ 10,5

1) Residual panel thickness is a mandatory dimension

2) The value for the anchorage depth  $h_v$  results from panel thickness  $h$  minus residual panel thickness  $h_r$

Annex B 6

Appendix 11 / 12

**Table C1: Characteristic values for anchor design**

Anchor type			FZP II 11x10 M6/T/9 PA		
Façade panel			Laminam 12+		
Nominal panel thickness	$h_{nom} =$	[mm]	12,5		
Residual panel thickness	$h_r =$	[mm]	$\geq 4,5$		
Embedment depth <sup>1)</sup>	$h_v =$	[mm]	$\geq 6$		
Anchor spacing	$a_{max} =$	[mm]	750		
Edge distance	$a_{r\ min} =$	[mm]	$\geq 100$	$\geq 50$	
Characteristic resistance <sup>3)</sup>	Tension load	$N_{RK} =$	[kN]	1,74	1,53
	Shear load	$V_{RK} =$	[kN]	3,41	3,04
Trilinear limit	Interaction	$X =$	[-]	1,2	
Partial safety factor <sup>2)</sup>		$\gamma_M =$	[-]	1,8	

- 1) For the application of FZP II in Laminam 12+ the following applies:  
Anchorage depth  $h_v =$  panel thickness  $h$  - residual panel thickness  $h_r$  (see Annex B4)
- 2) In absence of national regulations
- 3) The characteristic resistance values were obtained considering  $h_v = 6$  mm

**Tabelle C2: Characteristic resistance for steel failure**

Type of Anchor			FZP II 11 M6/T	
Characteristic resistance under tension load <sup>1)</sup>	$N_{RK,s} =$	[kN]	11,10	
Partial safety factor <sup>2)</sup>	$\gamma_{Ms} =$	[-]	1,89	
Characteristic resistance under shear load <sup>1)</sup>	$V_{RK,s} =$	[kN]	5,53	
Partial safety factor <sup>2)</sup>	$\gamma_{Ms} =$	[-]	1,57	

- 1) Without strain hardening and minimum tensile strength of 550 N/mm<sup>2</sup>
- 2) In absence of national regulations
