II SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT

1 Technical description of product and intended use

Technical description of the product

fischer concrete screw UltraCut FBS II R is a concrete screw made of stainless steel. The anchor is installed in a drilled hole and anchored by mechanical interlock.

An illustration of the product is given in Annex A.

The characteristic material values, dimensions and tolerances of the anchors not indicated in Annexes shall correspond to the respective values laid down in the technical documentation of this European Technical Assessment.

The anchors are intended to be used with embedment depth given in Annex B, Table B2.1. The intended use specifications of the product are detailed in the Annex B1.

2 Specification of the intended use in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed intended working life of the anchor of 50 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Characteristics of product

Mechanical resistance and stability (BWR 1):

The essential characteristics are detailed in the Annex C1, C2 and C4.

Safety in case of fire (BWR 2):

The essential characteristics are detailed in the Annex C3.

Other Basic Requirements are not relevant.

3.2 Methods of assessment

The assessment of fitness of the anchor for the intended use in relation to the requirements for mechanical resistance and stability and safety in use in the sense of the Basic Works Requirement 1 has been made in accordance with EAD 330232-01-0601; Mechanical fasteners for use in concrete.

4 Assessment and verification of constancy of performance (AVCP)

4.1 AVCP system

According to the decision 1996/582/EC of the European Commission, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No. 305/2011) is 1.

fischer concrete screw UltraCut FBS II R	Annex A2 of European Technical Assessment ETA-17/0740
Product description Geometry and material	

Specification of intended use:

Size	FBS II R							
	8		10			12		
Nominal embedment depth [mm]	50	65	55	65	85	60	75	100
Static and quasi-static loads in cracked and uncracked concrete	✓							
Fire exposure								
Seismic performance category C1 and C2	-	✓	-	✓	-	✓	-	✓

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206:2013 + A1:2016
- Strength classes C20/25 to C50/60 according to EN 206:2013 + A1:2016

Use conditions (Environmental conditions):

- Structures subjected to dry internal conditions
- For all other conditions according to EN 1993-1-4:2015-10, corresponding to corrosion resistance class CRC III

Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the screw is indicated on the design drawings (e.g. position of the screw relative to reinforcement or to supports, etc.).
- Design of fastenings according to EN 1992-4:2016 and EOTA Technical Report TR 055

Installation:

- Hammer drilling or diamond drilling or hollow drilling according to Annex B4
- Screw installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on site.
- In case of aborted hole: New hole must be drilled at a minimum distance of twice the depth of the aborted hole or closer, if the hole is filled with a high strength mortar and only if the hole is not in the direction of the oblique tensile or shear load.
- Adjustability according to Annex B3
- Cleaning of drill hole is not necessary when using a hollow drill or:
 - If drilling vertically upwards
 - If drilling vertical downwards and the drill hole depth has been increased. It is recommended to increase the drill depth with additional $3 d_0$.
- After correct installation further turning of the screw head should not be possible.
- The head of the screw must be fully engaged on the fixture and show no signs of damage.
- For seismic performance category C2 applications: The gap between screw shaft and fixture must be filled with mortar; mortar compressive strength $\geq 50 \text{ N/mm}^2$. (e.g. FIS V Plus, FIS HB, FIS SB or FIS EM Plus)

Adjustment

It is permissible to untighten the screw up to two times for adjustment purposes. Therefore the screw may be untightened to a maximum of $L_{adj} = 20$ mm to the surface of the initial fixture. The total permissible thickness of shims added during the adjustment process is $t_{adj} = 10$ mm. The required nominal anchoring depth h_{nom} must be kept after the adjustment process.

Intended use – Adjustment
Minimum thickness of members, minimum spacing and edge distance

Annex B3
of European
Technical Assessment
ETA-17/0740

Installation instruction part 1

Step 1: Creation of the drill hole:

Drill the hole using hammer drill, hollow drill or diamond core drill

Drill hole diameter d_0 and drill hole depth h_1 according to table B2.1

Step 2: Cleaning of the drill hole - horizontal:

Clean the drill hole. This step can be omitted in the preparation of the hole by using a hollow drill bit or diamond core drill. (recommendation: use the fischer FHD hollow drill bit)

Step 2: Cleaning of the drill hole - vertical:

Cleaning of the drill hole can be omitted, if drilling vertically upwards or if drilling vertically downwards and the hole depth has been increased. It is recommended to increase the drill hole depth by an additional $3 \times \text{drilling } \varnothing$ when drilling vertically downwards.

Step 3: Installation:

Turn in until the head is in contact with the fixture.

Installation with any torque impact screw driver up to the maximum mentioned torque moment ($T_{\text{imp,max}}$ according to table B2.1).

(recommendation: use the fischer FSS 18V 400BL)

Alternatively, all other tools without an indicated torque moment are allowed (e.g. ratchet spanner). The indicated torque moments $T_{\text{imp,max}}$ for impact screw driver are not decisive for manual installation.

Step 4: Checking of the correct installation:

After installation a further turning of the screw must not be possible. The head of the screw must be in contact with the fixture and is not damaged

fischer concrete screw UltraCut FBS II R

Installation Instructions

Annex B4
of European
Technical Assessment
ETA-17/0740

Installation instruction part 2

Adjustment

Optional:

It is permissible to adjust the screw twice.

Therefore, the screw may be untightened to a maximum of $L_{adj} = 20$ mm off the surface of the initial fixture. The total permissible thickness of shims added during the adjustment process

is $t_{adj} = 10$ mm.

The required nominal anchoring depth h_{nom} must be kept after the adjustment process. (see also annex B3)

Filling of the annular gap

For seismic performance category C2 applications:

The gap between screw shaft and fixture must be filled with mortar; mortar compressive strength ≥ 50 N/mm² (e. g. FIS V Plus, FIS HB, FIS SB or FIS EM Plus).

As an aid for filling the gap, the filling disc FFD is recommended.

Characteristic values for resistance to fire											

Table C4.1: Displacements due to tension loads (static and quasi-static)

FBS II R			8		10			12		
Nominal embedment depth	h_{nom}	[mm]	50	65	55	65	85	60	75	100
Tension load in uncracked concrete	N	[kN]	3,5	7,1	4,2	7,0	11,9	5,0	6,0	17,1
Displacement in uncracked concrete	δ_{N0}	[mm]	0,5	0,7	0,4	0,6	0,8	1,0	0,9	1,25
	$\delta_{N\infty}$		0,7	0,7	0,8	0,8	0,8	1,25	1,25	1,25
Tension load in cracked concrete	N	[kN]	3,5	4,5	4,2	7,0	8,1	5,0	6,0	12,0
Displacement in cracked concrete	δ_{N0}	[mm]	0,6	0,4	0,4	0,6	0,7	0,9	0,9	1,4
	$\delta_{N\infty}$		1,5	1,1	1,0	1,8	1,8	1,4	1,7	1,9

Table C4.2: Displacements due to shear loads (static and quasi-static)

FBS II R			8		10			12		
Nominal embedment depth	h_{nom}	[mm]	50	65	55	65	85	60	75	100
Shear load in cracked and uncracked concrete	V	[kN]	11,0	15,9	10,4	11,9	20,9	12,7	24,9	26,2
Displacement (the gap between fastener and fixture is subtracted)	δ_{V0}	[mm]	4,1	2,7	1,2	1,2	3,5	1,1	2,5	2,9
	$\delta_{V\infty}$		6,2	4,1	1,8	1,8	5,3	1,7	3,8	4,4

Table C4.3: Displacements due to tension loads (Seismic Performance Category C2)

FBS II R			8	10	12
Nominal embedment depth	h_{nom}		65	85	100
Displacement DLS	$\delta_{N,C2 (DLS)}$	[mm]	0,9	0,9	1,1
Displacement ULS	$\delta_{N,C2 (ULS)}$		2,5	2,7	3,2

Table C4.4: Displacements due to shear loads (Seismic Performance Category C2)

FBS II R			8	10	12
Nominal embedment depth	h_{nom}		65	85	100
Displacement DLS	$\delta_{V,C2 (DLS)}$	[mm]	1,6	1,7	2,6
Displacement ULS	$\delta_{V,C2 (ULS)}$		5,0	3,8	6,6

fischer concrete screw UltraCut FBS II R

Displacements due to tension and shear loads
