Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment ETA-11/0418 of 4 December 2025

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	Upat Injection system UPM 55
Product family to which the construction product belongs	Bonded fasteners and bonded expansion fasteners for use in concrete
Manufacturer	Upat Vertriebs GmbH Bebelstraße 11 79108 Freiburg im Breisgau DEUTSCHLAND
Manufacturing plant	Upat
This European Technical Assessment contains	79 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	EAD 330499-02-0601, Edition 12/2023
This version replaces	ETA-11/0418 issued on 30 September 2016

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The "Upat Injection system UPM 55" is a bonded fastener consisting of a cartridge with injection mortar UPM 55 and a steel element according to Annex A5.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 or 100 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex B3 to B12, C1 to C16, C19, C21, C23, C24, C25 to C34
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C1 to C4, C20, C22, C23, C24
Displacements under short-term and long-term loading	See Annex C17, C18, C35, C36
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C37 to C47

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C48 to C51

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-02-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 4 December 2025 by Deutsches Institut für Bautechnik

Intended use
Specifications part 1

Annex B1

Deutsches Institut für Bautechnik DIBt

Specifications of intended use part 2

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A2:2021.

Use conditions (Environmental conditions):

- Fastener intended for use in structures subject to dry, internal conditions (all materials).
- For all other conditions according to EN 1993-1-4:2006+A1:2015 corresponding to corrosion resistance classes to Annex A6 table A6.1 (metric sizes) or Annex A7 Table A7.1 (fractional sizes).

Design:

- Fastenings are designed under the responsibility of an engineer experienced in fastenings and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e. g. position of the fastener relative to reinforcement or to supports, etc.).
- Fastenings are designed in accordance with:
  EN 1992-4:2018 and EOTA TR 082 from June 2023.

Installation:

- Fastener installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Fastening depth should be marked and adhered to installation.
- Overhead installation is allowed (necessary equipment see installation instruction).

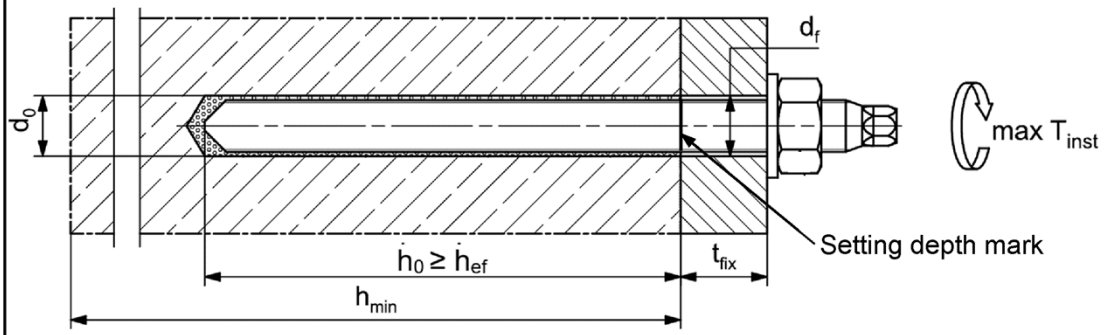
Stainless steel R property class 80	*		

Alternatively: Colour coding according to DIN 976-1:2016

[1)] PC = property class

Installation conditions:



Threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

- Materials, dimensions and mechanical properties according to **Annex A6**, **Table A6.1**.
- Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored.
- Setting depth is marked.
- Steel load-bearing capacities for hot-dip galvanised parts are only valid if the threaded rod and nut are correctly paired. The strength class of the nut must be one strength class higher than that of the threaded rod (≥ M12 in combination with tolerance class 6AX in accordance with EN ISO 10684:2004+AC:2009 two strength classes higher). The pairing of undersized threaded rods (additional designation U according to EN ISO 10684) with oversized nuts (additional designation Z or X according to EN ISO 10684) is not permitted under any circumstances

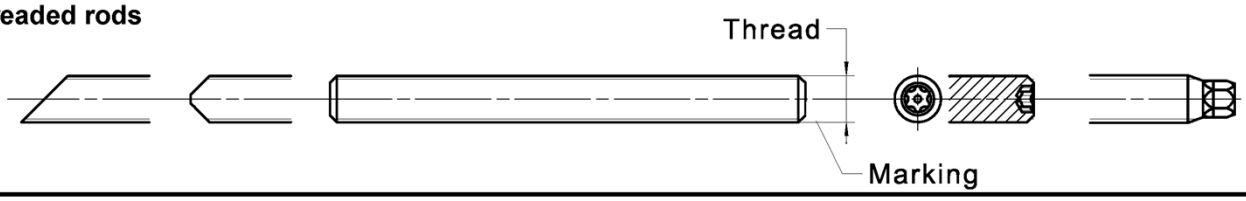
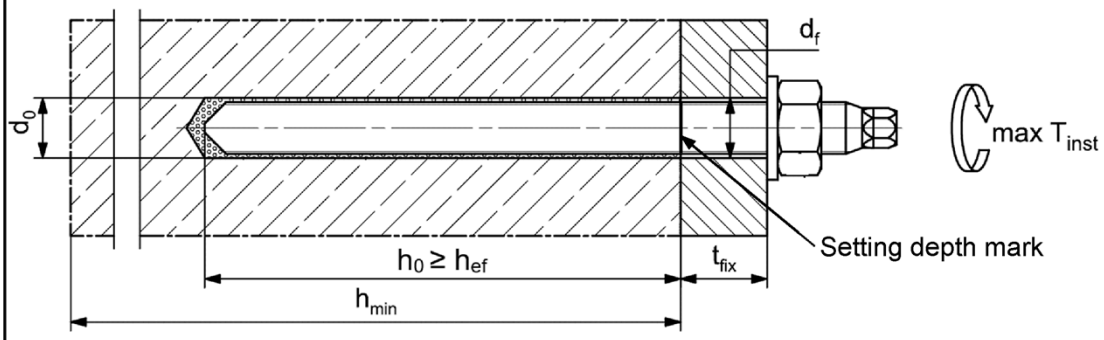
Maximum installation torque		max T_{inst}	[Nm]	18	41	60	107	136	173	180

[1] Both drill hole diameters can be used.

Threaded rods



Installation conditions:



Additional requirements for Threaded rods, washers and hexagon nuts:

- Materials, dimensions, and mechanical properties according to **Annex A7**, **Table A7.1**.
- Inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored.
- Setting depth is marked.
- Steel load-bearing capacities for hot-dip galvanised parts are only valid if the threaded rod and nut are correctly paired. The strength class of the nut must be one strength class higher than that of the threaded rod (≥ M12 in combination with tolerance class 6AX in accordance with EN ISO 10684:2004+AC:2009 two strength classes higher). The pairing of undersized threaded rods (additional designation U according to EN ISO 10684) with oversized nuts (additional designation Z or X according to EN ISO 10684) is not permitted under any circumstances

Cleaning brush (steel brush)
Processing time and curing time

Annex B13

Deutsches Institut für Bautechnik DIBt

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		Drill the hole. Nominal drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **Tables B3.1, B4.1, B8.1, B9.1, B10.1, B11.1, B12.1**.
2		Cleaning the drill hole: Blow out the drill hole twice, with oil-free compressed air (p ≥ 6 bar). 
3		Brush the drill hole twice. For drill hole diameter ≥ 30 mm use a power drill. For deep holes use an extension. Corresponding brushes see **Table B13.1**.
4		Cleaning the drill hole: Blow out the drill hole twice, with oil-free compressed air (p ≥ 6 bar). 

Go to step 6

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see **Table B1.1**) for correct operation of the dust extraction.
2		Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data. Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **Tables B3.1, B4.1, B8.1, B9.1, B10.1, B11.1, B12.1**.

Go to step 6

Upat Injection system UPM 55

Intended use
Installation instructions part 1

Annex B14

Deutsches Institut für Bautechnik DIBt

Installation instructions part 2

Drilling and cleaning the hole (wet drilling with diamond drill bit)

1		Drill the hole. Drill hole diameter $\mathbf{d_0}$ and nominal drill hole depth $\mathbf{h_0}$ see **Tables B3.1, B4.1, B8.1, B9.1, B10.1, B11.1, B12.1**.		Break the drill core and remove it.
2		Flush the drill hole with clean water until it flows clear.		
3		Blow out the drill hole twice, using oil-free compressed air (p > 6 bar).		
4		Brush the drill hole twice using a power drill. Corresponding brushes see **Table B13.1**.		
5		Blow out the drill hole twice, using oil-free compressed air (p > 6 bar).		

Preparing the cartridge

6		Remove the sealing cap. Screw on the static mixer (the spiral in the static mixer must be clearly visible).		
7				Place the cartridge into the dispenser.
8				Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey.

Upat Injection system UPM 55

Intended use
Installation instructions part 2

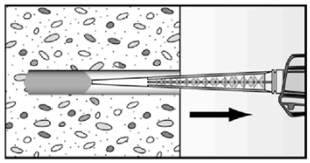
Annex B15

Deutsches Institut für Bautechnik DIBt

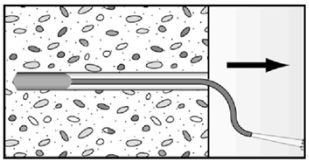
Installation instructions part 3

Injection of the mortar

9

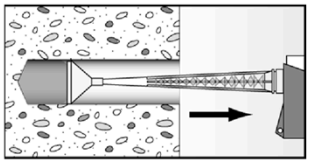


Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles.



The conditions for mortar injection without extension tube can be found in **Table B13.2**.

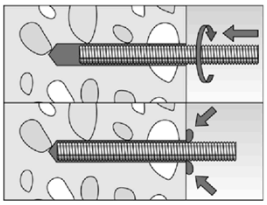
For deeper drill holes, than those mentioned in **Table B13.2,** use a suitable extension tube.

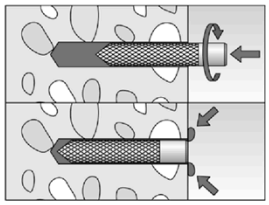


For overhead installation, deep holes (h_0 > 250 mm) or drill hole diameter (d_0 ≥ 30 mm / 1 1/8") use an injection-adapter.

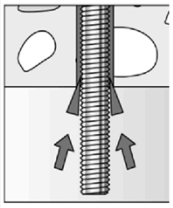
Installation of Anchor rods, Threaded rods or Upat IST

10

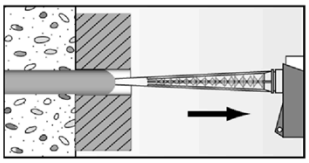




Only use clean and oil-free metal parts.
Mark the setting depth of the metal parts. Push the Anchor rod, Threaded rod or Upat IST down to the bottom of the hole, turning it slightly while doing so.
After inserting the metal part, excess mortar must be emerged around the anchor element. If not, pull out the metal part immediately and reinject mortar.



For overhead installations support the metal part with wedges (e.g.centering wedges) or overhead clips.

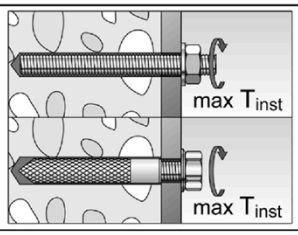


For push through installation fill the annular gap with mortar.

11

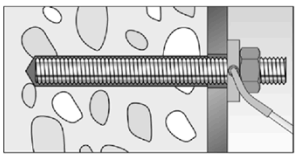
Wait for the specified curing time t_{cure} see **Table B13.3**.

12



Mounting the fixture
max T_{inst} see **Tables B3.1, B4.1, B8.1 and B9.1**.

Option



After the minimum curing time is reached, the gap between metal part and fixture (annular clearance) may be filled with mortar via the filling disc.
Compressive strength ≥ 50 N/mm²
(e.g., Upat injection mortars UPM 55, UPM 44 UPM 33).
ATTENTION:
Using filling disc reduces t_{fix} (usable length of the anchor).

Upat Injection system UPM 55

Intended use
Installation instructions part 3

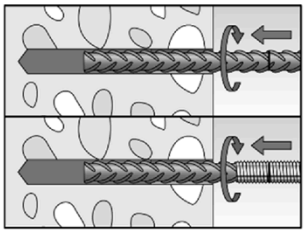
Annex B16

Deutsches Institut für Bautechnik DIBt

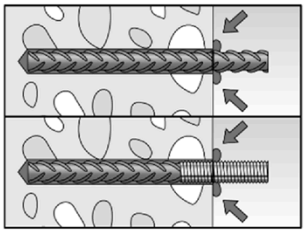
Installation instructions part 4

Installation reinforcing bars and Upat FRA

10



Only use clean and oil-free reinforcing bars or Upat FRA. Mark the setting depth. Turn while using force to push the reinforcement bar or the Upat FRA into the filled hole up to the setting depth mark.

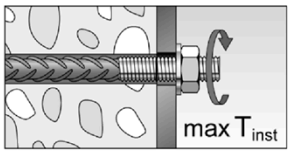


When the setting depth mark is reached, excess mortar must be emerged from the mouth of the drill hole. If not, pull out the anchor element immediately and reinject mortar.

11

Wait for the specified curing time t_{cure} see T**able B13.3**.

12



Mounting the fixture max T_{inst} see **Table B12.1**.

Table C35.1: Displacements for fraction Threaded rods

Threaded rod		3/8"	1/2"	5/8"	3/4"	7/8"	1"	1 1/8"
Displacement-Factors for tension loading [1]								
Uncracked or cracked concrete; Temperature range I, II, III								
$\delta_{N0\text{-Factor}}$	[mm/(N/mm²)]	0,08	0,09	0,10	0,11	0,11	0,12	0,13
$\delta_{N\infty\text{-Factor}}$		0,12	0,13	0,15	0,16	0,17	0,19	0,19
Displacement-Factors for shear loading [2]								
Uncracked or cracked concrete; Temperature range I, II, III								
$\delta_{V0\text{-Factor}}$	[mm/kN]	0,15	0,12	0,09	0,07	0,07	0,05	0,05
$\delta_{V\infty\text{-Factor}}$		0,22	0,18	0,14	0,11	0,10	0,08	0,07

[1] Calculation of effective displacement:

$\delta_{N0} = \delta_{N0\text{-Factor}} \cdot \tau$

$\delta_{N\infty} = \delta_{N\infty\text{-Factor}} \cdot \tau$

τ = acting bond strength under tension loading

[2] Calculation of effective displacement:

$\delta_{V0} = \delta_{V0\text{-Factor}} \cdot V$

$\delta_{V\infty} = \delta_{V\infty\text{-Factor}} \cdot V$

V = acting shear loading

Table C35.2: Displacements for fractional Upat IST

Upat IST		3/8"	1/2"	5/8"	3/4"
Displacement-Factors for tension loading [1]					
Uncracked or cracked concrete; Temperature range I, II, III					
$\delta_{N0\text{-Factor}}$	[mm/(N/mm²)]	0,10	0,10	0,11	0,13
$\delta_{N\infty\text{-Factor}}$		0,15	0,16	0,17	0,19
Displacement-Factors for shear loading [2]					
Uncracked or cracked concrete; Temperature range I, II, III					
$\delta_{V0\text{-Factor}}$	[mm/kN]	0,09	0,08	0,07	0,05
$\delta_{V\infty\text{-Factor}}$		0,14	0,12	0,10	0,08

[1] Calculation of effective displacement:

$\delta_{N0} = \delta_{N0\text{-Factor}} \cdot \tau$

$\delta_{N\infty} = \delta_{N\infty\text{-Factor}} \cdot \tau$

τ = acting bond strength under tension loading

[2] Calculation of effective displacement:

$\delta_{V0} = \delta_{V0\text{-Factor}} \cdot V$

$\delta_{V\infty} = \delta_{V\infty\text{-Factor}} \cdot V$

V = acting shear loading

Upat Injection system UPM 55

Performance
Characteristic resistance for combined pull-out and concrete failure under seismic action (C1) for and reinforcing bars; working life 50 and 100 years

Annex C41

Deutsches Institut für Bautechnik DIBt

Table C42.1: Characteristic **resistance** and **displacements** for **combined pull-out** and **concrete failure** for **metric Anchor rods** and **Threaded rods** in hammer drilled holes under seismic action performance category **C2**; **working life 50 and 100 years**

Anchor rod / Threaded rod				**M12**	**M16**	**M20**	**M24**
Characteristic bond resistance, combined pull-out and concrete cone failure							
Hammer-drilling with standard drill bit or hollow drill bit (dry or wet concrete)							
Temperature range	I: 24 °C / 40 °C	$\tau_{Rk,C2}$	[N/mm²]	3,5	5,8	5,0	3,1
	II: 35 °C / 60 °C			3,5	5,8	5,0	3,1
	III: 50 °C / 72 °C			3,3	5,5	4,7	2,9
Hammer-drilling with standard drill bit or hollow drill bit (water filled hole)							
Temperature range	I: 24 °C / 40 °C	$\tau_{Rk,C2}$	[N/mm²]	3,5	5,8	5,0	3,1
	II: 35 °C / 60 °C			3,5	5,8	5,0	3,1
	III: 50 °C / 72 °C			3,3	5,5	4,7	2,9
Installation factors							
Tension loading							
Dry or wet concrete		γ_{inst}	[-]	1,0			
Water filled hole				1,2		1,4	
Displacement-Factors for tension loading [1]							
$\delta_{N,C2(50\%)}$-Factor		[mm/(N/mm²)]		0,09	0,10	0,11	0,12
$\delta_{N,C2(100\%)}$-Factor				0,15	0,17	0,17	0,18
Displacement-Factors for shear loading [2]							
$\delta_{V,C2(50\%)}$-Factor		[mm/kN]		0,18	0,10	0,07	0,06
$\delta_{V,C2(100\%)}$-Factor				0,25	0,14	0,11	0,09

[1] Calculation of effective displacement:

$\delta_{N,C2(50\%)} = \delta_{N,C2(50\%)\text{-Factor}} \cdot \tau$

$\delta_{N,C2(100\%)} = \delta_{N,C2(100\%)\text{-Factor}} \cdot \tau$

τ = acting bond strength under tension loading

[2] Calculation of effective displacement:

$\delta_{V,C2(50\%)} = \delta_{V,C2(50\%)\text{-Factor}} \cdot V$

$\delta_{V,C2(100\%)} = \delta_{V,C2(100\%)\text{-Factor}} \cdot V$

V = acting shear loading

Performance
Fire resistance to steel failure under tension and shear loading for fractional Threaded rods

Annex C50

Characteristic bond resistance for cracked concrete under fire conditions for metric and fractional Anchor rods and Threaded rods in hammer drilled holes with standard drill bit or hollow drill bit

The characteristic bond resistance for cracked concrete under fire conditions for a given temperature.

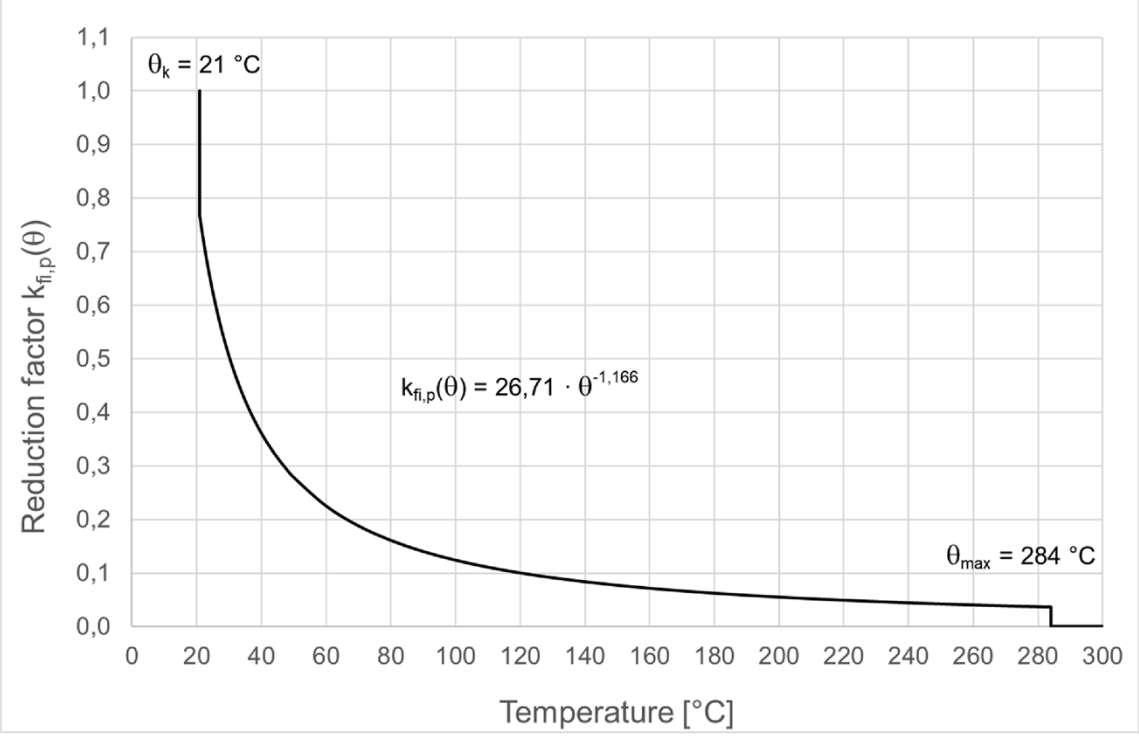
$\tau_{Rk,fi}(\theta)$ has to be calculated by the following equation:

$$\tau_{Rk,fi}(\theta) = k_{fi,p}(\theta) \cdot \tau_{Rk,cr,C20/25}$$

θ	=	Temperature in °C in the mortar layer,
$\tau_{Rk,fi}(\theta)$	=	Characteristic bond resistance for cracked concrete under fire exposure for a given temperature in N/mm² for concrete classes C20/25 to C50/60.
$k_{fi,p}(\theta)$	=	Reduction factor under fire conditions.
$\tau_{Rk,cr,C20/25}$	=	Characteristic bond resistance for cracked concrete C20/25 in N/mm², given in Table C5.1, Table C6.1, Table C26.1 or Table C28.1, respectively.

Anchor rods or Threaded rods	If: θ > 21 °C	$\mathbf{k_{fi,p}(\theta) = 26,71 \cdot \theta^{-1,166}} \leq 1,0$	see Figure C51.1
	If: $\theta > \theta_{max}$ = 284 °C	$\mathbf{k_{fi,p}(\theta) = 0}$	

Figure C51.1: Graph of reduction factor $k_{fi,p}(\theta)$ for Anchor rods or Threaded rods.



Upat Injection system UPM 55	**Annex C51**
Performance Characteristic bond resistance under fire conditions for anchor rods and threaded rods
